v.2

INDIANA STATE LIBRARY

PREFACE.

STATE OF INDIANA,
OFFICE OF SECRETARY OF STATE,
INDIANAPOLIS, October 1, 1907. }

In accordance with the requirements of an act approved February 3, 1853 (1st G. & H., p. 538), the several administrative officers of the State, and the Trustees and Superintendents of the Benevolent, Reformatory and Educational Institutions thereof, have submitted to the Governor and filed in the Executive Department the reports required of them for the fiscal year ending October 31, 1906, and the calendar year ending December 31, 1906, respectively, which have been entered of record in the order of their reception and delivered to the Secretary of State for publication under the order of the Board of Commissioners of Public Printing and Binding.

One thousand copies of reports are now bound in two volumes, and issued to the officers and persons designated by law to receive them. The usual number of copies of each report have also been bound in pamphlet form and delivered to the responsible officer or Superintendent of each Institution for distribution in such manner as they may deem for the best interests of the State.

HARRY SLOUGH,
Clerk Bureau of Public Printing.

TWENTY-FIFTH
ANNUAL REPORT

OF THE

State Board of Health
of Indiana

FOR THE

Fiscal Year Ending October 31, 1906.
Statistical Year Ending December 31, 1906.

TO THE GOVERNOR.

INDIANAPOLIS:
WM. E. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING.
1907.

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
November 20, 1906. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, November 28, 1906. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

November 28, 1906.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

FRED L. GEMMER,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, November 28, 1906.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer November 28, 1906.

HARRY SLOUGH,
Clerk Printing Bureau.

J. N. HURTY, M. D., Phar. D., Secretary	Indianapolis.

TWENTY-FIFTH ANNUAL REPORT

OF THE

INDIANA STATE BOARD OF HEALTH.

HON. J. FRANK HANLY, *Governor of Indiana*:

The State Board of Health presents herewith its twenty-fifth annual report.

There is reported herein the transactions and work of the Board, an account of expenditures for the year ending October 31, 1906, and a report of the work of the State Laboratory of Hygiene, which is a department of the Board. The report also contains the vital statistics for the calendar year.

TRANSACTIONS AND WORK OF THE BOARD.

The State Board of Health now exists and acts under the health law passed in 1891. There are five members, four being appointed by an appointing board composed of the Governor, the Secretary of State, and the Auditor. These four members appoint a secretary, who thereupon becomes a member of the Board. All members serve for four years.

Quarterly meetings shall be held, and the Board may hold as many special meetings as may seem to it proper. During this year four regular and four special meetings were held, the minutes of which fully set forth the work done.

The quarterly reports of the secretary presented at the regular quarterly meetings give specific accounts of his office and field work. It will be noted that visits are made from time to time by the secretary to different parts of the State. The reasons for making the same, and the results accomplished, are given in detail in his reports. It is believed that these visits are of benefit to the health cause, for the people so assert in letters and com-

munications to the press, and medical and local societies, and teachers' and farmers' institutes which have been addressed, have always passed resolutions of thanks for the advice given and services rendered. A further reason for believing that visits made by the secretary are profitable and of advantage to the people lies in the fact that one hundred and sixty-seven requests were received from various parts of the State for inspection of sanitary conditions and advice concerning the same. The requests came from the governing authorities of counties, cities and towns, from school authorities and private citizens.

VITAL STATISTICS.

The vital statistics are collected for the calendar year. They, therefore, can not be presented until after December 31. After all reports are received it will require about ninety days to arrange, tabulate and analyze the data. The mortality statistics are accurate, but the birth and disease statistics are inaccurate. This condition is explained and a remedy recommended in another place in this report. Original certificates of death are received at this office, and carefully arranged and indexed, and citizens may consult the same and secure transcripts without fee. There is an average of 17 applications per week for transcripts of death records. The sanitary usefulness of death records is applied immediately upon receipt of the same.

EPIDEMICS.

No widespread epidemics are recorded, but, of course, there were a number of local epidemics. The same are specifically set forth in the special report on vital statistics.

Smallpox existed every month in the year, but it has been in mild form and only occasionally fatal. Prompt quarantine and general vaccination in the localities where it appeared has always succeeded in extinguishing it. The State Board has again and again informed the people that vaccination is the only safe and practical prophylaxis for smallpox.

The deaths from diphtheria have decreased in the last six years as follows: 1900, deaths 746; 1901, 554; 1902, 424; 1903, 462; 1904, 314; 1905, 366. This decrease we attribute almost entirely to the now general use of diphtheria antitoxin. It took some

time to overcome ignorant opposition and the prejudice against the remedy, but now the people generally understand the situation, and by demanding its use the good results are secured. It is now the widespread opinion in the medical world that antitoxin is a specific against diphtheria if administered before the disease is far advanced, and that the only reason why diphtheria deaths are recorded is because many cases are not treated until the attack has continued for several days. The prophylactic use of antitoxin is not practiced to the degree it should be. If it were used in all outbreaks for immunizing, the number of cases would be greatly diminished.

There were fewer scarlet fever deaths and fewer cases and outbreaks for the year ending November 1, than in the same period for any year since 1900. Typhoid fever also shows a decrease by the same comparison. The statistical report to be made up after December 31, when all data will be at hand, will give full details of diseases, epidemics and deaths.

STATE LABORATORY OF HYGIENE.

Especial attention is invited to the report of work done in the State Laboratory of Hygiene. There are two divisions to the laboratory—the chemical division and the bacteriological and pathological division. The last is devoted entirely to disease prevention work and the first to hygienic water analyses and to food and drug analyses. We feel sure that the work of the laboratory proves fully its usefulness; indeed it is a true economy on account of its disease and adulteration prevention work. The bacteriological and pathological division has been termed “*the life-saving station*,” and the chemical division “*the money-saving station*.”

RECOMMENDATIONS.

In accordance with the law, which makes it the duty of the State Board of Health to make such recommendations as to health statutes as may seem proper, we recommend as follows:

A REGISTRATION LAW.

The registration law passed in 1899, and under which the mortality statistics have been so correctly collected, was declared unconstitutional by the Supreme Court in February, 1904. This

law was an amendment to the health law of 1891, and it was discovered that the title of the amended law was incorrectly quoted in the new act, one line being omitted. This was the sole point upon which the decision was based. As the law of 1891, which now became operative, contained some provisions for registering deaths, births and contagious diseases, the Board decided to continue the system which prevailed under the new law, and to this date mortality statistics have been collected through the momentum acquired from the law of 1899.

The necessity of an efficient registration law plainly exists, and the authority and power conferred upon the State Board of Health for its enforcement should be sufficient in every way.

SANITARY SCHOOLHOUSES AND TEACHING HYGIENE IN THE PUBLIC SCHOOLS.

We suggest a statute requiring that all schoolhouses hereafter built shall conform to natural sanitary laws; also that the act should contain a clause requiring that hygiene be taught in the public schools. Not less than 10 per cent. of school moneys are now wasted on account of unsanitary schoolhouses, in which start most of our epidemics, and in which are laid the foundations in many for consumption and other diseases in after life. Massachusetts, Michigan and other States have statutes of the character we propose, and better health and progress among the school children has thus been secured.

A STATE HOSPITAL FOR INDIGENT CONSUMPTIVES.

Massachusetts, New York, Rhode Island and others have provided State hospitals for consumptives, and Maryland, Pennsylvania, Michigan and other States are considering the matter. Both humanity and economy demand such institutions in every State. At present fully 1,000 poverty-stricken consumptives are being cared for at public expense or by private charity in Indiana, but in such manner as to spread the disease and not restore to health a single patient. The proposition to establish a State Hospital for indigent consumptives is not one to unnecessarily spend money, but is a measure to more wisely expend the money now devoted to caring for these unfortunates.

We believe all of these recommendations are wise, and would, if put in force by the State, save money to the people and materially promote the public happiness.

POLLUTION OF STREAMS, WATER SUPPLIES AND SEWERS.

Indiana is an inland State, and is fortunately supplied with numerous streams and lakes, and except in the central and southern portion there is yet abundance of ground water. It is apparent that our streams and lakes are valuable assets, and should be jealously protected from pollution or other destruction. They are sources of beauty and refreshment to the land, sources of a valuable food supply, and must eventually furnish public water supplies. It is this last fact which makes it urgent that early action be taken for their preservation.

The experience of the Indianapolis and of the Muncie Water companies demonstrates that the ground water is limited, is growing less and less, and is inadequate for the public supply. For a few years both of the cities named had an abundant pure supply, but gradually the quantity diminished and new wells were bored. This did not relieve the situation, for the new wells penetrated the same water bearing stratum as the old ones, and no increase in quantity was secured.

The Muncie Water Company relieved the situation for a time by making up the deficiency with filtered water from White River, but lately the oil wells above Muncie so badly polluted the river with kerosene products that it was impossible to filter the water. This drove the Muncie Company to dam a small creek and establish a water shed. It is certain, however, if stream pollution is permitted to continue, that this supply for Muncie can not be depended upon.

The Indianapolis Water Company has been compelled to put in extensive filter beds, costing five or six hundred thousand dollars, to filter the water from White River. This filtered water is at present mixed with deep well water (the amount of the latter diminishing daily), and this constitutes the Indianapolis supply. The lesson is—Indianapolis must very soon depend entirely upon the river, and if the gross pollution which now exists is permitted to continue, filtration will become more and more difficult and expensive, and Indianapolis, and also other cities on the shores

of White River, will be sorely injured, possibly to a degree to stop their growth. What has occurred along White River will in time occur in all parts of the State, and now seems to be the time to apply the remedy. We propose a law similar to that of Massachusetts, where these same problems arose some years ago, and which the said law has satisfactorily solved. This law should make it unlawful to deposit sewage, factory wastes, or any polluting matter into streams or lakes, and it should provide that within a certain time that all cities and towns shall dispose of their sewage by well proven methods known to sanitary science; and that all factories shall, within twelve months from the going into effect of the law, dispose of their wastes in a sanitary way. All of this has been repeatedly accomplished in other States.

As cities and towns are continually making expensive mistakes in the matter of establishing public water supplies and in building sewers and drains, it seems wise to adopt the successful method pursued in Ohio, Massachusetts, Pennsylvania, and other States, to prevent such mistakes, with their consequent money loss and sanitary failure. This method is to require by statutes that all plans and specifications for public water supplies, and for sewers and drains, shall be submitted for the approval of the State Board of Health before the same may be constructed.

For the State Board of Health to properly execute a law of this kind, controlling stream pollution, the water supplies and sewer construction, a sanitary engineering department would be required, and therefore said law would necessarily create such department. There should be a competent sanitary engineer appointed by the State Board, and a proper appropriation given for the enforcement of the act.

We believe a wise law of this character is absolutely necessary for the promotion of the welfare of the State, and would be an economic measure, and for these reasons we propose the same. We further believe that the protection of the lakes and streams from pollution-destruction, is a subject which will not down, and the question about the matter is, Shall the State attend to it now, or do so after disease, death and pecuniary loss compel action?

THE PURE FOOD AND DRUG LAW.

We call your special attention to the report of the chemical division upon the work done in the enforcement of the pure food and drug law. We think this report will plainly show the value of the department, and it will also show the lameness of the present law as discovered by trials in the courts. Under the present law it must be proven that the vendor of adulterated foods and drugs *knowingly* sold or had in his possession to sell, and in the case of preservatives, it must every time be proven that the special preservative used is injurious to health. Until these faults are removed, we can not hope to promptly and adequately punish offenders. We therefore recommend the repeal of all laws and parts of laws pertaining to food and drug adulteration, and the enactment of a statute embodying the main principles and features of the national pure food and drug law.

The water work of the chemical laboratory appears to be of special value. One hundred and forty-six public water supplies have been examined, of which 74 were good, 43 bad, and 29 of doubtful character. Five hundred and forty-two private supplies were analyzed, including deep driven and bored wells, and shallow driven and dug wells. Of these, 236 were good, 54 were suspicious, and 202 were bad. These results are indicative of the character of the public and private water supplies of the State, and show the necessity for their careful supervision.

We hope that full consideration of these recommendations will secure your support, and that the same will be recommended in your message to the Legislature.

Approved by the Board, November 16, 1906, and ordered to be submitted to the Governor.

Minutes of Transactions

BY

Quarters.

FIRST QUARTER.

SPECIAL MEETING.

December 14, 1905.

Present: Drs. Davis, Eisenbeiss, Tucker and Hurty.

Meeting called to order by the President at 12 m. The work of the Health Officers' School for Town Officers was reviewed and approved.

Adjourned to meet at 2 p. m., Friday, December 15.

ADJOURNED MEETING.

December 15, 1905.

Called to order by President Davis.

Present: Drs. Davis, Eisenbeiss, Tucker and Hurty.

The two days' meeting of the Health Officers' School were reviewed, and the proceedings ordered written out.

The following resolution after the discussion was adopted:

RESOLUTION CONCERNING THE NATIONAL PURE FOOD LAW.

Whereas, Food and drug adulteration has become a very great evil, causing enormous injury to the health and life of the people, and also causing them great monetary loss; and

Whereas, It is certainly true that the State food and drug laws do not furnish practical protection on account of their varying standards and requirements; therefore it is

Resolved, That the Indiana State Board of Health, which is charged with the enforcement of the Indiana pure food and drug law, most respectfully requests the Senators and Congressmen from Indiana to give their support to the Heyburn Bill, now before the Congress of the United States.

Passed unanimously.

Ordered, That no more equipment or apparatus or large orders for supplies shall be purchased, except by order of the Board; but the Secretary may purchase such minor supplies as are necessary for the proper conduct of the laboratory.

REGULAR MEETING OF THE STATE BOARD OF HEALTH.

January 12, 1906.

AFFAIRS CONSIDERED OF THE FOURTH CALENDAR QUARTER OF 1905 AND THE FIRST FISCAL QUARTER OF 1906.

Present: Drs. Davis, Wishard, Tucker and Hurty.

Called to order by President Davis at 2:20 p. m.

Minutes of the last regular, and special meeting of December 14, read and approved.

Report of Secretary for the last calendar quarter called for and read as follows:

QUARTERLY REPORT OF SECRETARY.

Comparatively speaking, smallpox has almost disappeared from the State. No deaths from the disease occurred for the last three months, and only straggling mild cases over the State have been reported. In December small epidemics (less than ten cases) of very mild form occurred in Allen County, in Fort Wayne, also in a railroad camp in Johnson County. Only two of the nine cases in the camp ceased working during the attack. The cases were not reported for some time, as they were not suspected of being smallpox. Less typhoid occurred in the last calendar quarter of 1905 than in the same period of 1904. An epidemic was investigated by Dr. Knabe at Cambridge City, and full report by her is added hereto. Typhoid, as usual, was first in order of area of prevalence in October and November. Bronchitis was first in December. An unusual amount of tonsilitis was reported in November.

VISITS AND INSPECTIONS.

November 1, Vincennes.—Account of meeting of the State Charities Association, to deliver an address upon tuberculosis.

November 12, Cambridge City.—By Dr. Knabe, account typhoid.

November 14, Columbus.—Account of conference with local authorities, and to deliver an address on public health before the local sanitary association.

November 17, Kokomo.—On account of smallpox.

November 23, Mooresville.—On account of smallpox.

November 26, New York.—Account of National Tuberculosis Exhibit.

December 8, Cambridge City.—On account of typhoid fever, and to deliver an address upon public health before the local teachers' association and citizens.

December 5, Lafayette.—On account of smallpox in Tippecanoe County north of the city.

December 12, Delphi.—On account of conference with local authorities, and to deliver an address upon public health before the Oracle Club.

December 12, Middletown.—Dr. Knabe, to investigate an instance of wholesale poisoning, supposed to be by ptomains.

Complete reports of these visits are given herewith.

Vincennes, November 1.—The State Charities Association hold annual meetings in various parts of the State. This year the five days' meeting was held in Vincennes. Addresses were made on the different days by the Governor, the Lieutenant-Governor, and many eminent men from other States. The evening of November 1 was given up to a consideration of tuberculosis. The principal speaker of the evening was Dr. Frank Billings, of Chicago. In his address he made an argument for the creation of a State hospital for consumptives, which was based principally upon the experiences of physicians. He told in detail of the distressing and heart-rending incidents met with in general practice, and how it is possible for the State to save hundreds of lives annually; also prevent the breaking up of homes and the making of widows and orphans. "The first step," said Dr. Billings, "in the fight against tuberculosis by the State, is the establishing of a State hospital where poor and deserving people smitten with the disease may be taken and cured. If the State is not interested in saving helpless women and children, who shall be interested? If the State is not interested in protecting and preserving the homes, who shall be? If the State is not interested in preventing the creation of widowhood and orphanage, who shall be interested?" Your secretary was the second speaker, and was assigned the duty of presenting the consumption statistics of the State. This

was done by charts and tables drawn from the statistics of the State Board of Health.

Columbus, November 14.—The Board of Health of the city of Columbus invited me to meet with them on November 14 to consider the water supply of the city and needed sanitary reforms. At the same time I was invited to deliver an address in the evening before the Women's Sanitary Association. In the matter of the public water supply, the board was advised to adopt filtration works and not deep wells. Columbus has an unfailing soft water supply in the east fork of White River. It simply needs filtration. Some members of the council and many citizens advocate deep wells; the objections to which are that they always furnish hard water and invariably in time give out, as has been the case at Indianapolis, Muncie, and Fort Wayne. This is also true of numerous cities throughout the United States. Columbus has only a partial sewage system. It is very small indeed for the size and wealth of the community. The board was advised to advocate the building of a sanitary system of sewers. The proper procedure would be to employ an expert sewer engineer to visit the sewer system leading to every lot. It would, of course, be impossible to build this system all at once, but it would be possible to gradually construct it.

In the evening at the First Christian Church I addressed the Women's Sanitary Association, making suggestions how the said association might proceed to better affairs and conditions in Columbus, and also presenting in a general way the tuberculosis conditions in the State.

Kokomo, November 17.—Two mild cases of smallpox were discovered at the borders of the city, and there was a dispute among the physicians as to the nature of the disease. For this reason the State Board of Health was called upon for a visit. Upon arrival I was taken to see the cases. They proved to be unquestionably smallpox, and all precautions were taken accordingly.

Mooreville, November 23.—In answer to an urgent telephone message from Dr. Brackney, Health Officer, I went to Mooreville to see a case of supposed smallpox. The patient was 32 years old, and he proved to have a plain attack of severe chickenpox. He had an excellent vaccination mark, and all of the symptoms pointed to chickenpox rather than to smallpox. No quarantine

was held, and there was no increase of cases. The children in the house had all recently had chickenpox a few weeks before, and this man, a boarder in the house and a traveler, had very likely contracted it from the children. He had never had the disease before.

New York, November 26.—Permission granted, I visited New York, November 26, and remained there four days, attending the American Tuberculosis Exhibition.

AMERICAN TUBERCULOSIS EXHIBITION.

The American Tuberculosis Exhibition, which opened November 27 and closed December 9, was under the auspices of the National Association for the Study and Prevention of Tuberculosis and the Committee on the Prevention of Tuberculosis of the Charity Organization Society. The exhibition was in the west wing of the American Museum of Natural History on Seventy-seventh Street, near Central Park. The object of the exhibition was to show the methods that are being adopted throughout this country and in Europe to prevent and cure consumption. On the night of November 27, before an audience of at least 1,500, in the lecture amphitheater of the Museum building, addresses were made by Dr. Thomas Darlington, Health Commissioner of New York; Mr. Morris K. Jessup, philanthropist; the President of the Museum, and Mr. Talcott Williams, editor of the Philadelphia Press. On Wednesday evening, November 29, another large audience assembled in the Auditorium, and the subject of the evening was "Tuberculosis and the Labor Unions." This meeting was addressed by several labor leaders, among them J. W. Sullivan and Prof. Graham Taylor. Mr. Samuel Gompers was sick and could not attend. This meeting was also addressed by the well-known leader in philanthropy, Mr. Edward T. Divine. The speakers traced out clearly the relationship which the laboring classes have with tuberculosis. Mr. Sullivan in his speech made plain how the rich people are directly and immediately interested in the suppression of the disease. It was Mr. Sullivan who told the story, which I found was well known in New York, about Mrs. McKinley's fine dress being made in a sweatshop by consumptive women. It was supposed all the time that this dress was constructed in the

magnificent Fifth Avenue establishment from which it was purchased. The address of Prof. Taylor was exactly to the point, was eloquent, and his plea for the life and health of the laboring classes aroused much enthusiasm. Dr. Divine, scholar and philanthropist, who gives his whole life to charity work, delivered an address which was not second in effectiveness to that of Prof. Taylor. On the evening of December 1 another public meeting was held in the Museum auditorium. A crowd assembled, and not less than 2,000 were present. Dr. Herman Biggs presided. The speakers were Dr. Flick, superintendent of the Henry Phipps' Institute; Dr. Trudeau, of the Saranac Sanatorium; Dr. Bowditch, of the Sharon, Mass., Sanatorium, and Drs. Evans and Jacobi, of Chicago. There were present Dr. Jacobs, of Baltimore, and several of the faculty of Johns Hopkins University; also Drs. Pruden, Northrup, Knopf, and others representative of the New York City medical profession. Philadelphia was also fully represented, and prominent among the gentlemen from that city was Dr. Ravenel, who has made the brilliant experiments upon tuberculosis infection, through the intestinal tract. On the stage sat the millionaire philanthropist, Henry Phipps, who will give \$5,000,000 for the institution which bears his name. Mr. J. Pierpont Morgan, who is the treasurer of the Exhibition Committee, was present in the audience. This meeting on Friday evening, December 1, was of such moment as to warrant the term "epoch making."

THE EXHIBITION.

Upon entering the exhibition room, the first exhibit to attract attention was a section, full size, of a cell in the Clinton Prison. This cell illustrated ventilation and all sanitary features. Dr. Ransom, physician of the Clinton Prison, was present, and in another part of the room exhibited statistical charts, photographs, and drawings illustrating how tuberculosis had been expelled from the prison and was no longer produced by living in that institution. The New York City Board of Health exhibit was very extensive and complete, and illustrated the work it is doing with ninety-eight large frames showing charts, pictures, diagrams, blanks, and the like. Dr. Biggs estimates that 85 per cent. of all tuberculosis cases are reported. Of the remaining 15 per cent. ten

never call a physician, and the other five is the result of neglect on the part of practitioners. We might ask: When will it be possible to make such a report as this in Indianapolis? Further illustrations of the work of the New York Board of Health were shown in two large books two feet square and six inches thick. These books showed by pictures, charts, statistics and running account, the work of the City Board in its fight against tuberculosis since the same was begun. The New York Bellevue and Allied Hospitals had striking exhibits. One of these was "a typical dark interior bedroom, one of 360,000 in New York city, as the visiting nurses see them." The above was the sign over this reproduction. The bedstead, bed clothing, and indeed everything in the room, were transferred from a real case. Of course, the articles had been disinfected, but the room was exactly like those found in the tenements, minus the dirt. By the side of this exhibit was another of the same room after it had been remodeled and alterations effected by the visiting nurses of the tuberculosis clinic of Bellevue and Allied Hospitals and by the Tenement House Department. In the remodeled room a window had been cut through, the room itself made clean, papered with light colored paper, and made at least 50 per cent. more habitable. The New York City Tenement Department represented its work by two large cabinets of 41 leaves each, showing photographs, four on each leaf, on both sides. This made eight to a leaf, 204 photographs in all. These represented tenement house conditions. This association also showed 24 frames 2 by 3 feet, which made plain how difficult it was for the poor to live in New York, and how productive of disease such methods of living must be. Other exhibits illustrative of the above conditions of tuberculosis were made by the Presbyterian Hospital Dispensary and the Gouverneur Hospital, the St. Joseph Hospital for Consumptives, the Bellevue Hospital, the New York State Hospital for Incipient Consumptives, the Stony Wold Sanatorium, the Loomis Sanatorium, Sanatorium Gabriels, Saranac Lake Hospital, Toronto Free Hospital, Moskoka Sanatorium, Colorado Association Health Farm, Agnes' Memorial Sanatorium, White Haven Sanatorium, Pennsylvania; Johns Hopkins Hospital, Tuberculosis Department, showing the Phipps Dispensary; Visiting Nurses' Association of Baltimore, the Hampton Negro Conference, the

Massachusetts State Board of Health Hospital, the Boston Anti-Tuberculosis Association, Sharon Sanatorium of Massachusetts, the Pottenger Sanatorium of California, Craigmore Sanatorium, Colorado National Jewish Hospital, Maine State Sanatorium, Dr. Brooks Sanatorium at New Canaan, Conn., the Gaylor Farm Sanatorium, Sea Breeze Hospital, United States General Hospital, Ft. Bayard; the Newport Anti-Tuberculosis Association, the South Mountain Camp Sanatorium, California Mountain Side Sanatorium, Cal.; Maryland State Board of Health, Massachusetts State Board of Health, and the Indiana State Board of Health.

To detail all of these exhibits would, of course, be exceedingly tiresome, but to see them would be interesting and instructive, as I found it to be. Dr. Biggs remarked that the growth of the work of preventing tuberculosis astonished him. "What we see before us," said he, "has all developed within the last twelve years, and it represents a work of humanity and for medicine which is inestimable." There were exhibited models of sleeping shacks, at least a score of different methods of disposing of sputum in a sanitary way, and there were also large models in plaster of tenement blocks in New York, as they appeared before they were torn down, and again as they appear after being built in accordance with the new tenement law of the city. The Tenement Commission of New York has the power to condemn buildings and to force their demolition. They can not, however, compel rebuilding, but if the owner does rebuild, then the tenement must be constructed according to certain principles laid down in the law, and which are specifically prescribed by the Commission. The immense factor of unsanitary tenements in the production of disease has only to be mentioned to be admitted and understood. The plaster models of the old tenement building occupied a table 4 by 2 feet, and were in exact proportion. The rentals from this one block, as represented in the model, amounted to \$115,000 per year. This was called the "Lung Block," and belonged principally to the Trinity Church Corporation. It is this corporation which put up the strongest opposition to the passage of the law creating the Tenement House Commission. The model in plaster showing the new buildings was on a table 5 by 7 feet, and by looking in at the windows it was plain how every room

was provided with light and air. It is the belief of the tenement workers that the providing of pens and awful quarters increases pauperism and miserable living and does not, as is contended by the owners of these awful tenement blocks, provide shelter for those who would otherwise be shelterless.

The pathological exhibit was not so extensive as that shown at the Baltimore meeting in January, 1904. It was, however, as much to the point. The Phipps Institute exhibited 45 specimens, showing as many tissues infected with tuberculosis. Pruden, Larkin, Wilson, Delafield and Wood made an interesting exhibit of acid-fast bacteria, to which class tubercle organisms belong, and all had many pathological specimens. Dr. Pruden exhibited seven specimens of lungs which were labeled "Carbon Lungs." The placard announced that most of the specimens were taken from persons who had died from other diseases than tuberculosis, but whose lungs were found to be filled with soot, making them black. With these lungs were exhibited those of an Eskimo and of a young child, showing how the lungs of a human being look when normal. The Eskimo was accidentally killed, and never lived in a region where soot is known. Dr. Pruden also exhibited a gelatin plate with the following notice: "The scattering of bacteria in the air when sneezing." In this notice was printed the following: "In sneezing, a fine spray or fluid from the nose or throat is driven into the air. In this way the air for two or three feet in front of the person who sneezes or coughs without covering mouth and nose, may be contaminated. If he be a consumptive, these secretions may contain tubercle bacilli. This specimen shows what was coughed four feet away when a student coughed and sneezed after rinsing mouth and nose with a culture of prodigiosus. The red spots growing luxuriantly upon the plate make plain the contamination of the atmosphere by coughing and sneezing." Other plates exhibited by Dr. Pruden show how flies carry tubercle bacilli on their feet. Flies were permitted to feed upon sputum, and then were placed in a glass box, the air of which was sterile, and allowed to walk over the gelatin plates. On some plates tubercle bacilli were growing, and on others bacillus prodigiosus, which, as we know, makes a more striking illustration.

The Saranac Laboratory showed cultures in tubes and bottles

of tubercle bacilli, also illustrating the chemical composition of this organism by showing in proportion amounts of wax, acids, fat, tissue, etc., which constitute the bacillus. To illustrate the enormous scale upon which these experiments were conducted, where a pound of tubercular bacilli must be grown, two ounces of powdered bacilli were shown. Dr. Trudeau also showed tuberculin, and bacilli emulsions. Conspicuously posted in large letters on a banner was the following resolution passed in regular meeting by the New York Medical Association:

"Whereas, There is no specific medicine for tuberculosis known. and the so-called cures and specifics and special methods of treatment widely advertised in the daily papers are, in the opinion of this Society, without special value and do not at all justify the extravagant claims made for them, and serve chiefly to enrich their promoters at the expense of poor, and frequently ignorant or credulous consumptives; therefore

"Resolved, That a public announcement be made that it is the unanimous opinion of this Society that there exists no specific medicine for the treatment of pulmonary tuberculosis; that no cure can be expected from any kind of medicine or method except the regular accepted treatment which relies mainly upon pure air and nourishing food."

Cambridge City, December 8.—Upon invitation from the town authorities I visited Cambridge City to confer with them upon various public health affairs and especially in regard to typhoid fever, an epidemic of this disease having prevailed very lately. It was also arranged that at the time of my visit I should address the Township Teachers' Association and citizens. With Dr. J. B. Allen, Health Officer, I visited twelve premises where typhoid fever existed or had existed. All but two of these were found to be exceedingly unsanitary; just the kind of places where typhoid should prevail. The disposal of sewage is exclusively by the pit method, there being no sewers in the town. The evils of this method were gone into extensively, and the town council was urged to at least begin the building of a proper sanitary sewer system. As is always the case in such instances, I suggested that a competent sanitary engineer be engaged to lay out the entire town in a comprehensive system of sanitary sewers, and that the town construct the system as rapidly as finances would

permit. Where sewage disposal is in pits, open to the air and polluting the soil, there typhoid fever will be. In all, twenty-four samples of water were analyzed from Cambridge City, and of this number fourteen were found to be badly polluted, two were suspicious, and the others passable.

Before the Township Teachers' Association I spoke upon "What Teachers Could Do to Benefit Pupils by Sanitary Methods." The address was very kindly received, and a resolution of thanks and confidence was passed.

Lafayette, December 5.—On account of an urgent telephone message from Dr. Hiner, County Health Officer, I visited Lafayette to settle a dispute in regard to the diagnosis of cases of smallpox. Upon arrival I found south of the city, in the country about three miles, a family of four, all afflicted with variola. Three of the cases were mild indeed, and the fourth could not be called severe. Quarantine was established, vaccination recommended, and all other precautions taken.

Delphi, December 12.—This visit was made to confer with the authorities in regard to needed public sanitary works. Delphi has an excellent water supply from deep wells, but no sewers. Sewage disposal is affected entirely by pits. The usual argument against this method was presented; also the usual advice given that the city employ an expert engineer to lay out the place in a comprehensive system of sanitary sewers, the same to be built as rapidly as finances would permit. The authorities were also urged to give strong support to the Health Officer in his efforts to raise the standard of public health.

In the evening I addressed the Oracle Club in the auditorium of the city high school. The title of the lecture was "Public Health Is Public Wealth," and was illustrated by lantern slides. The lecture was well received, and a vote of thanks given, together with a resolution of confidence in the State Board of Health and praise for its work.

REPORT OF TYPHOID FEVER EPIDEMIC AT CAMBRIDGE CITY, INDIANA, INVESTIGATED BY DR. HELENE KNABE.

Pursuant to the order of the State Board of Health, the undersigned went to Cambridge City, November 14, 1905, to investigate the epidemic of typhoid fever which had been reported from there. This investigation disclosed the following facts:

Cambridge City has a population numbering 1,700, is situated on White Water River, and part of the town is bisected by a small canal. The streets are fairly kept and reasonably dry.

There is no general system of sewage in this town, but some of the residents whose lots border on the canal have connected their stables and outhouses with the latter, and the sewage is washed into the water. These, however, represent only a very small percentage, and in the larger part of the town the surface privy is the only means for the disposal of filth. During the last summer this condition resulted in a singular boycott, because the farmers objected to having the vaults emptied into their property, and as a result the filth of the whole town accumulated for several months, unfortunately through the hottest season, when flies were plentiful. All the wells in Cambridge City are very shallow, usually from sixteen to twenty feet, penetrating only into the gravel and only protecting the people from drinking the immediate surface water.

At times, for instance during heavy rains, or when the river is high, the canal overflows and floods a large area of the tract surrounding the canal, including a lot upon which the garbage of the town is dumped. This place is very unsightly and malodorous at all times.

Cambridge City is supplied with water works, but this water is not used for drinking purposes, because the water from the canal occasionally gets into the pipes, badly polluting the supply. In fact, one of the cases sick at the present time is known to have been infected through drinking water which came through one of the water works pipes.

From the records of the Health Officer I learned that there had been two cases of typhoid fever reported during July. Another case was reported on September 1. These three cases soon recovered and I was not able to see the persons. At the present time there are eight cases in various stages of the disease. Four persons have recovered from slight attacks of typhoid fever, but I was able to make a positive diagnosis by the Widal test. Two deaths have occurred so far. Raymond Goodwin, who died October 15, and Mrs. Brier, who died November 10. Some of the cases can not be traced to any definite source, and it is my opinion that flies are responsible in these instances. The conditions surrounding some households are so unsanitary that they are a menace to the whole community. In one instance a family consisting of a father, mother and six children ranging in age from one to twelve years, live in a miserable little house made on the order of a woodshed, with a tiny kitchen added. The house has two rooms, one bedroom just large enough to hold two plain double beds and leave a space of two feet between beds and wall. The other room contains an old lounge, a stove, two chairs and a baby carriage, and is not large enough to accommodate the whole family at one time. Either one of the rooms has only one window, which, needless to say, is never opened. Bedding was given to the people a short time ago by the "Charity Organization of Cambridge City." The father, James Goodwin, and two of the children, Mary, ten, and Mamie, eight years old, are sick with typhoid fever. The children are recovering, while the father was at the height of the disease at the time of my visit. The whole house is in an extremely filthy condition. The way these people live is best shown by a remark which one of the children made

some time ago when asked if Mamie slept alone, as the physician had directed. The child said, "Oh, yes, nobody sleeps with her except mama, baby and my other sister."

The surroundings of this house are as bad as they can possibly be. A very dirty hogpen and an outhouse in even a worse condition are about sixty-five feet away and on a considerably lower level than the well, which is a few feet from the house. The ground is strewn with filth for many feet around. These people did not disinfect anything, even though the physician who attended the case stated that he gave them disinfectants and instructed them in their use.

The schoolhouse of Cambridge City is a three-story brick, in which nine rooms are used for teaching purposes every day. It is heated by furnace, but there is no system of ventilation. The rooms on the third floor are used for the high school pupils and the lower grades are on the first and second floors. I also inspected the outhouse, finding it in a very unsanitary condition. There is no system of flushing it and the odor was very bad. It was stated that disinfection was practiced twice a week, but I advised that it be done every day regularly. The vault is cemented and connected by a pipe with the river. A sample of water from the well in the school yard was collected for examination.

During my stay at Cambridge City I made inspections at different houses situated at a low level, and found in two of them patients suffering of tuberculosis. Another case of suspected tuberculosis was referred to me by one of the physicians for diagnosis. The physical, as well as the examination of the sputum, showed the case to be far advanced. Two other cases suspected of having typhoid fever gave negative Widal reaction.

On Friday, November 17, I inspected the Suuny Side Dairy, managed by Mr. Moffitt. The stable was in bad condition, lacking the gutter. Horses were kept in the same stable and the ground in front of the door was soaked with the seepage from the stable, making it almost impossible to get into it. A very dirty trough was used to water the cows. The milk cooler as well as the buckets and bottles, are kept in a box outside the house, where they, of course, will be aired well, but are also open to the dust. The well is near the house and only about 35 to 40 feet away from a privy that is no credit to the owner of the place. I went also to the Jersey Dairy, in charge of Mr. Coop. The place is situated on a high ridge and the surroundings as good as could be required. The stable gives shelter to twenty-five cows. In one corner of the large square building some horses were kept, but they are entirely remote from the cows. The cows are watered from a spring in the woods, which is well protected and is not likely to be polluted. The milkhouse is scrupulously clean and is provided with a cooler according to the law, and the whole place is kept as well as can be under the circumstances. Mr. Coop asked to be given a copy of the rules of the State Board of Health governing the operation of dairies.

Summary.—Number of patients visited, eighteen; cases of typhoid fever, twelve; tuberculosis, three far advanced cases and one incipient case; lagrippe, two; Widal tests, seven; positive, five; negative, two; dairies inspected, two; one schoolhouse inspected; samples of water sent to Laboratory of Hygiene, ten; many typhoid circulars distributed.

THE THIRD ANNUAL HEALTH OFFICERS SCHOOL FOR TOWN OFFICERS.

The third Annual School for Town Health Officers was held in Indianapolis December 14 and 15. All town officers were summoned as usual and attended. The Claypool Hotel was headquarters, and all sessions were held in the auditorium of the hotel. The first session was promptly called to order December 14, at 10 a. m., by Dr. F. A. Tucker of the State Board of Health. The first paper was entitled "Insects and Disease," and was read by Dr. Hurty. This paper was discussed for fifteen minutes, and then a lecture was given by Prof. Severance Burrage, entitled "The Science of Disease Prevention." The conference adjourned at 12:15 to visit the laboratories and to call upon the Governor at 2 o'clock.

The Governor received the health officers very graciously, shaking hands with each one, and made a short speech in which he particularly urged them to make every effort to collect accurate vital statistics, for, said he, "Accurate vital statistics are of the greatest importance to the State, and they furnish the particular foundation upon which must stand disease prevention work." Dr. Tucker read a paper entitled "The Prevention of Tuberculosis," which was discussed at length. Dr. Tucker's essay dealt with the extent and destructiveness of tuberculosis in Indiana; it exhorted the officers present to thoroughly inform themselves in the important public movement against tuberculosis; to inform themselves in the early diagnosis of the disease, and to spread among the people the knowledge that in its early stages consumption is one of the most curable of maladies. Dr. Davis then read a paper entitled "The Air We Breathe," which was also discussed with interest. This paper briefly and clearly reviewed the extent and character of the atmosphere and its very great importance to health. This paper was remarkable for concentration, and contained enough points and facts to serve the general writer for several papers. Dr. Knabe read a paper entitled "A Laboratory View of the Infectious Diseases." In this paper Dr. Knabe told the officers how the infectious disease problem looks from the laboratory. She made plain how great the service was which the laboratory could render in the early diagnosis of diseases. The session closed with another lecture from Prof. Bur-

rage continuing the subject of the forenoon. Prof. Burrage is an excellent teacher, and presents his ideas clearly, and he made plain to his hearers the fundamental principles of disease prevention.

The evening session was called to order at 8 p. m. by Dr. Davis. Reports of health officers were listened to for an hour and a half, five minutes being allowed to each officer. At this point Dr. Davis suspended the reports until the next session to hear a lecture by Prof. H. E. Barnard, Chemist of the Board, entitled "Polluted Water in Indiana." Prof. Barnard reviewed the water work so far done in the laboratory, and made plain the benefits derived therefrom. He reported that the laboratory was now making a sanitary survey of White River, and within another year expected to have maps, analytical tables, and a full history showing this system as it now exists and giving its probable future usefulness. Prof. Barnard said that one of the great problems in Indiana today was that of the prevention of stream pollution.

The fourth session was called to order at 9 a. m. December 15 by Dr. Davis. Dr. T. Victor Keene, Superintendent of the State Laboratory of Hygiene, gave a lecture entitled "Experiences in Sanitary Work in Indianapolis." In this lecture Dr. Keene related in detail the experience of the Indianapolis Health Department in its efforts to secure pure milk and pure water. He also told many interesting and instructive experiences in medical school inspection in the management of infectious diseases. Following this, Prof. Barnard gave a lecture, "Food Adulteration in Indiana." Prof. Barnard reported that to date over 1,000 samples of foods and drugs had been examined, and 49 per cent. were found not up to standard or adulterated. Of 132 samples of vanilla, only 11 met the standard. Of 145 vinegars, only 12 proved to be what they were sold for. Of 58 samples of lime water purchased in various parts of the State, only 33 were found up to standard. Prof. Barnard truly stated this was a deplorable condition, and it should be righted as soon as possible. After Prof. Barnard's paper on "Food Adulteration in Indiana," and after some discussion, the following resolution was adopted:

Whereas, The members of this Association, being fully aware of the viciousness of food adulteration, both as an insidious attack on the

public health and as an economic fraud, and realizing the necessity for a National Pure Food Law to control interstate commerce in foods, and believing that such a law would relieve the conditions which make Indiana a dumping ground for the products of other states;

Resolved, That this Association urge the Senators and Congressmen of this State to use their strongest efforts to secure the passage of the Heyburn bill.

Unanimously carried.

The next order was a lecture entitled "The Tuberculosis Sanatorium," by Dr. H. H. Cowing, Health Officer of Delaware County. Dr. Cowing had lately visited the various sanatoria in the East, remaining for some time at the Adirondack Cottage Sanatorium, which institution was founded by the well-known Dr. E. L. Trudeau. Dr. Cowing reviewed the disposition and methods of cure by the outdoor life, plain food and regular living. In conclusion, he exhorted the health officers to keep constantly in mind the necessity of a State Tuberculosis Sanatorium in Indiana, and that they lend their fullest influence and efforts to secure the same. The exercises closed with a lecture by Dr. W. T. S. Dodds, of Indianapolis, upon "The Early Diagnosis of Consumption with Clinic." Dr. Dodds said that physicians did wrong to wait for the appearance of the classical symptoms of tuberculosis, but they should tell the patient of his affliction. The cure of tuberculosis, he said, depended largely upon discovery of case when in its early stages. The early symptoms were: "tired feeling," accelerated pulse, rise of temperature in the afternoon, with possibly sub-normal temperature in the morning, a dry, hacking, or rather an unproductive cough, for there is really no such thing as a dry cough. Even in apparently dry, hacking coughing, the patient sprays droplets of spittle into the air. If, with these symptoms, there is a loss of weight, and even if the sputum does not show the presence of an organism, and unless it is positively known that the said symptoms are due to other causes, it should be assumed that incipient tuberculosis exists.

As usual the attendance at the close had grown very small, but those who remained were enthusiastic, and from every indication one would judge they desired to hear more. Several officers took occasion to remark that this was the best conference or school they had so far attended.

REPORT OF THE INVESTIGATIONS AT MIDDLETOWN, INDIANA, SUSPECTED PTOMAIN POISONING.

By Dr. Helene Knabe.

I was sent to Middletown December 12 to investigate some cases of suspected ptomain poisoning which had occurred at the Welsh Hotel November 30, after the guests had partaken of a hearty dinner.

On my arrival I visited Dr. Waters, the Health Officer of the town, who was one of the guests at that dinner and made sick at that time. The doctor was kind enough to furnish me with a list of the names of the persons which were sick with what seemed to be poisoning, and he also gave a very clear history of the state of affairs as they occurred November 30. I found there were about twenty-four cases at the hotel and twelve cases outside. The persons who are named in the following list, "outside cases," had not come in contact with anybody from the hotel, nor had they obtained any food from there. Still the symptoms are identical with those at the hotel and in some of these cases they were very severe. The time during which this sickness appeared was the week from November 26 to December 3.

The list of cases in their order of occurrence is as follows:

November 28—

At Hotel: *Lamb, Leon (waiter).

November 29, 8 to 12 p. m.—

At Hotel: *Bicksler, Mr.; *Elliott, E. L.; *Waters, Dr. S. C.; *Welsh, Mrs. Anna (owner of hotel), slightly sick next night; *Munden, Mrs. (cook), sick three days.

Outside Cases: Fink, boy, age five, mild, no diarrhea; *Snellenberger, Mr.; *McKenzie, Mrs., mild case; *McKenzie, Mr., severe case; *Wallace, Dr., severe case; *Tykle, Mrs., severe case.

November 30, 3 to 8 p. m.—

At Hotel: *Kent, Mrs. (landlady); *Burk, Marion (waiter); Jackson, Olla (waiter), sick next morning; *Munden, boy, ten years (the cook's son); *Cooper, Frank; *Cooper, Edna; *Cooper, Carrie, mild; *McRoy, Mr.; *Pritchett, boy, age ten years; *Miller, E. P.; *Daniels, J. E., took dinner to nurse who did not get sick; *Levy, Mr., mild; *Levy, Mrs.; *Waters, Mrs., immediately after dinner went to Indianapolis, taken sick there at 7 p. m.; Boarder (traveling man), taken sick at noon; *Wright, Miss Sarah (laundress), taken sick at 11 p. m.; *Bicksler, Mrs.

Outside Cases: *Cassada, John; *Hodson, Gertrude; *Moore, Mr. (works in restaurant).

December 3—

Outside Cases: *Wood, Mr., severe; *Wood, Lee, severe; *Young Man.

*Cases seen by Dr. Knabe.

The attacks in every case began very suddenly with vomiting and purging. Most all of the cases at the hotel commenced shortly before supper on the evening of November 30. In all cases the prostration was pronounced and strychnine and nitroglycerine had to be given hypodermically. Dr. Waters, who had been sick the day before, attended the people at the hotel. Some of the patients complained of severe cramps

in arms and legs, and in the cases of Mrs. Welsh, Mr. Daniels, and Mrs. Bicksler these cramps appeared in the slightest over-exertion every day since. Dr. Thornburg, who treated Mr. Daniels during his attack stated that the vomitus of the patient was of a decided pink color, resembling that of a weak solution of Potassium Permanganate. During my stay at the Welsh Hotel I endeavored to find out the ways in which food is prepared there, but nothing that is not in keeping with the laws of cleanliness was to be seen anywhere. Mrs. Kent is always in the kitchen during meal time and supervises everything. The cooking utensils are of enameled ware and a few frying pans of the ordinary kind are also in use. All dishes and cooking utensils are kept very clean and the same can be said of the cupboards and, in fact, the whole house.

The menu for the Thanksgiving dinner consisted of roast turkey and duck, potatoes, celery, stewed cranberries, oyster dressing and ice cream. The fact that three guests for dinner and one for supper, as well as the landlord, Mr. Kent, and the chambermaid, did not get sick, though they had eaten of all the victuals which were provided, makes it doubtful that the cases were food poisoning. The question was raised that it might be the work of a person who desired to bring the hotel into disrepute, but as Mrs. Kent is always there before meal time and stays in the kitchen until all guests are served, makes it rather difficult to see how anyone could get at the food without being seen by her.

The cases that occurred in Middletown during that week are so much alike to those in the hotel, showing the same symptoms, viz.: vomiting, purging, profound prostration and remarkably quick recovery. The cases on the list marked with a star I have seen personally, and of the others the history was given by the attending physician, and all cases outside of the hotel I have carefully traced as far as possible and excluded any connection with the cases in the hotel.

The people at the hotel had not eaten the same food in the same amount and many of those who became ill had eaten very sparingly, while of the ones who escaped the trouble some had eaten heartily. There seems to be no ground to think the ice cream caused the sickness, because some cases occurred before Thanksgiving dinner, when they did not eat any cream. The same reason would rule out the oyster dressing and the vegetables; also no canned eatables were used and all the guests did not eat of every one of them. Also the fact that with the exception of two of the patients none that had been sick on November 29 was sick again on November 30. For Mrs. Welsh's case there is also an explanation, because this lady is in some legal difficulties and thought she was poisoned by her antagonist; she is very nervous and naturally would not get well so quick.

It is impossible for me to come to a solution of the question, and as in no cases vomit was saved the examination of which would probably have given a clue to the cause of the trouble, I can not see how it is to be settled definitely.

During my stay at Middletown I visited the schoolhouse. It is a brick structure containing six rooms. The water is supplied by the public water works of the town, and the building is heated by steam. The schoolhouse is supplied with toilet rooms for the girls, which are in the

basement and are in good condition, there being one of the usual public toilets with automatic flushing system. The toilet rooms for the boys are on the same order and some distance away from the main building.

While inspecting the room in which the smallest children are taught, I noticed that many of the children had bad colds, and the teacher stated that many of them had stayed home a few days, and at the time of my visit five were away. Inspection of the throat did not show anything alarming. The pharynx was pale, tongue very slightly coated and the papilla reddened, giving the appearance of a mild degree of the so-called "strawberry" tongue. There was a hollow cough, entirely unproductive, present in all cases affected, and slight coryza. I spoke to Dr. Waters about it, suggesting that it might be a mild epidemic of scarlet fever, and he promises to watch for any cases developing among other children.

Some cases of a skin disease that seem to have been brought there from Anderson proved to be scabies, and the treatment which the doctor has given is making an end to that.

In closing I would like to call attention to the unsanitary condition of the waiting room in the Terminal Station at Anderson. There is no ventilation except when the door is opened, and the appearance of the floor under the cases of a candy department that is in the front part of the room was anything but sanitary.

HYGIENIC LABORATORY.

The Bacteriological and Pathological Laboratory is now in full operation. Dr. Keene commenced regular work January 1, 1906. Prior to this Dr. Keene gave considerable time to the making out of lists for apparatus, furniture, etc., also in arranging the laboratory. Outfits for collecting samples of sputum and blood, and for diphtheria cultures have been sent to all applicants, and to January 1 the following examinations have been made:

EXAMINATIONS MADE IN DIVISION OF BACTERIOLOGY AND PATHOLOGY UP TO AND INCLUDING DECEMBER 31, 1905.

	Positive.	Negative.	Total.
Tuberculosis	59	20	79
Typhoid	22	4	26
Diphtheria	30	15	45
			150

CHEMICAL LABORATORY.

The analyses made to date are published in the monthly bulletin for November, and following is a summary:

SUMMARY.

Foods.

Articles Examined.	Number Found to be of Good Quality.	Number Adulterated or Varying from Legal Standard.	Total Number of Articles Examined.	Percentage of Adulteration.
Butter	4	4	8	50.0
Cream	28	18	46	39.1
Milk	225	57	282	20.2
Lard	5	7	12	58.3
Olive oil	65	40	105	38.1
Oysters	21	5	26	20.0
Sausage	36	67	103	65.0
Miscellaneous meat products.....	10	7	17	41.0
Codfish	..	4	4	100.0
Cream of tartar.....	107	1	108	1.0
Lemon extract	15	214	229	93.4
Vanilla extract	11	121	132	91.5
Vinegar	12	133	145	91.7
Miscellaneous food products.....	19	1	20	5.0
Total food products.....	558	679	1,237	54.97

Drugs.

Alcohol	63	32	95	37.6
Lime water	33	25	58	43.1
Tr. of Iodine.....	2	19	21	90.5
Total	98	76	174	43.6

The following table shows the status of smallpox for the quarter:

	No. of Cases Reported.	Deaths.	No. of Counties Invaded.
October, 1904	226	18	29
October, 1905	0	0	0
November, 1904	355	12	37
November, 1905	84	0	5
December, 1904	472	8	38
December, 1905	112	1	13

By the above table comparison shows: Cases decreased 81 per cent.; deaths decreased 97 per cent.; area invaded decreased 82 per cent.

Ordered, That the Secretary's report be spread of record.

AMERICAN TIN PLATE COMPANY.

The following letter was read by the Secretary:

Hon. Board of Health of Indiana, Indianapolis, Ind.:

Gentlemen—We hereby respectfully request that you renew our permits for emptying into streams waste water, etc., from our several plants in this State, comprising the following: Elwood, Anderson, Gas City and Muncie.

Yours very truly,

THOMAS O'BRIEN, District Manager.

After discussion it was ordered that the permits of last year be renewed.

ORDERED.—The Secretary was given permission to purchase certain supplies for the Bacteriological Laboratory, a partial list of which was presented.

SPECIAL MEETING.

March 7, 1906.

Called to order by President Davis at 10 a. m.

Present: Drs. Davis, McCoy, Wishard, Tucker, and Hurty.

President announced the special meeting was called to consider sanitary surveys of three schoolhouses, as an urgent demand had been made by citizens.

SCHOOLHOUSE AT WINGATE.

Survey.—This is a two-story slate roofed brick building built about 1890. It contains four recitation rooms, four cloak rooms and two halls. Main building 37 by 52 feet. Hall 17 by 18 feet, outside measurement. Basement under main building about 6½ feet, with dirt floor. Two furnaces are used to heat the building, and their foundations had to be dug about 18 inches below the level of basement floor to set them up. Even with that, they are too close to the floor above, and there is danger of setting fire to the building, as the joists above them are charred and blackened with the heat. The walls of the building are built solid from the foundation, with no stone or slate between the basement and main building to check the rise of moisture.

The schoolrooms are 25 by 34 feet, with 14-foot ceilings in lower and 12-foot ceilings in upper rooms. Each room has a four-foot cloak room attached. There are ventilators in each room connected with the basement for the supply of fresh air, and

opening into the attic for the outlet of the foul air, but are not satisfactory. The teachers state that they have to open the windows to air the rooms, and that if the windows are open in one room, they can not keep the other rooms warm. (Many of the pupils were wearing wraps in the room that day.)

The rooms are papered, but owing to the moisture in the walls the paper is coming off badly in every room. The plastering is badly cracked in the two lower rooms, the west upper room and both halls. The floors are badly worn in the lower rooms and will need repairing next fall. The windows have good blinds; the floors are oiled and clean, the seats in good shape and of height to suit the pupils. The stairway is 5 feet wide to a 7-foot landing, then divides into two 3-foot reverse stairways to the hall above.

The janitor stated that it was impossible to keep the rooms warm on cold, windy days, and that school had to be dismissed last year for several days on that account; he said that moisture would accumulate on the walls in cold weather so that the paper would come loose and the water run down to the floor. In wet weather that water came into the basement, making it very hard to keep the furnaces going, although it had never gotten into the fire-boxes. He also stated that the ringing of the school bell or slamming of the front door to the hall would shake the whole building. He did not consider the building dangerous.

The enumeration of pupils is 190. There are three and one-half school districts attending this school now, and if more room was available there would be two and one-half more that would be brought there. There are five teachers—four in the school building and one in the town hall, which is being used as a school-room for the overflow pupils. The Trustee, Mr. H. T. Van Cleave, states that he will have to add more rooms to or rebuild the schoolhouse or repair and practically rebuild three others in the county districts. He thinks it economy to tear down this building and put up a modern one that will accommodate all the pupils in one school. He also says the township is out of debt and can build.

H. M. Dickinson, Principal, stated the building was unsanitary, could not be properly heated and was too small and could not be remodeled to advantage.

J. M. Allhands, Assistant, stated same as above and also said

there had been a great deal of sickness from colds and sore throat in his room, which he was sure was caused by dampness of the walls and the impossibility of keeping the rooms at a uniform temperature.

Dr. T. H. Allhands, Health Officer, has had two cases of pneumonia and several cases of tonsilitis among the pupils that he considers as directly traceable to the unsanitary condition of the school building.

R. N. Cordig, Member of Town Council, thinks the building is wholly inadequate to the needs of the school, that it is unsanitary, improperly constructed, and can not be remodeled economically, and advises that a modern sanitary building be erected.

J. A. Long, Postmaster, endorses Mr. Cordig's views.

Summary.

The building is unsanitary, improperly constructed, can not be remodeled or added to economically, and it is respectfully recommended that it be condemned for school purposes to take effect at end of present school term.

After full consideration the following proclamation was adopted:

PROCLAMATION OF CONDEMNATION.

Whereas, It has been shown to the satisfaction of the State Board of Health that the schoolhouse at Wingate, Montgomery County, Indiana, is unsanitary and unfit for housing school children; therefore, it is

Ordered, That said schoolhouse is condemned and shall not be used for school purposes after April 1, 1906.

Any violation of this order shall be promptly prosecuted by the Attorney-General according to the statutes provided.

SCHOOLHOUSE AT CLAYTON.

Survey.—This is a two-story brick, with belfry tower, containing four rooms 27x28 feet, two recitation rooms 12x22 feet, two halls and one 5-foot stairway. The building is well lighted and kept in neat, clean condition. Walls are painted and papered, good blinds at the windows and heated by soft-coal stoves in each room. Ventilated by doors and windows. Was built in 1883. The chimney at the south end of the building is split at the top for two or three feet and the wall is cracking and bulging outward at the junction of the upper and lower rooms. The brick in the

walls is very soft and could be easily broken and crushed and shows by its freshly broken condition that the whole wall on the south end is in danger of collapse. There is an iron rod run through the walls over the door of the entrance hall to keep them from collapsing and the wall is badly cracked to the belfry tower. There is no basement under the building, but a coal cellar has been dug under the northwest corner. The trustee who had this work done failed to build a wall under the foundation of the building, and as the water runs into the cellar whenever it rains, this corner of the building has settled and threatens to give down. A person jumping up and down in one of the upper rooms causes the whole building to quiver and windows and doors to rattle. The floors in the schoolroom are worn out, and it must be re-floored, and the halls in one or two rooms need replastering.

The enrollment is 194. There are five teachers and the high school course. The room used for the high school course contained 70 pupils. There are three districts combined in this school and the Trustee desires to bring in one or two more, or otherwise he will have to rebuild two one-room houses. The schoolyard contains two and one-half acres of ground and is well adapted for the purpose. The water closets are screened and have dug vaults. There are no walks to them.

A talk with Mr. Miller (a member of the Advisory Board) and others shows that the citizens consider the building unsafe for use. Dr. A. K. Gilbert, Township Trustee, stated that he had an architect furnish an estimate of cost of adding two rooms and remodeling the building, and that it would cost about \$6,000 to do the work.

It is respectfully recommended that the building be condemned as absolutely dangerous to life as well as unsanitary.

After full consideration the following proclamation of condemnation was adopted:

PROCLAMATION OF CONDEMNATION.

Whereas, It has been shown to the satisfaction of the State Board of Health that the schoolhouse at Clayton, Hendricks County, Indiana, is unsanitary and unfit for housing school children; therefore, it is

Ordered, That said schoolhouse is condemned and shall not be used for school purposes after April 1, 1906.

Any violation of this order shall be promptly prosecuted by the Attorney-General according to the statutes provided.

SCHOOLHOUSE AT AVON.

Sanitary Survey.—The building is a four-room, two-story brick with a slate roof. No basement. It was built in 1880, but burned down and was rebuilt in 1885 and an additional story added. The walls of the lower story are about 14 inches thick and the upper walls about 9 inches thick. The walls are beginning to crack and split open around the windows and doors. The rooms are $21\frac{1}{2} \times 30$ feet. There are two halls 10×30 feet and a single narrow stairway. No cloakrooms and no heat in the halls. The partition wall between the two lower rooms is cracked from bottom to top and beginning to open. The floors are worn out and full of cracks and the rooms all need replastering. The building is heated by two "Johnson's Ideal heater and ventilator furnaces," one in each lower room and heating the room above by a hot air pipe. There are ventilators in the floors of the lower rooms besides the ones connected with the heaters, but they have to be kept closed, as it is impossible to warm the rooms when they are open. There are no ventilators in the rooms above. The walls have been painted, floors oiled and blinds at the windows. Desks in fair condition and of suitable heights for the pupils. The building has been well taken care of. The water closets have good gravel walks leading to them and are screened. There is a good frame barn about 30×60 feet on school lot. The location of the buildings is bad, the ground being low and without any outlet for drainage. The Danville and Indianapolis interurban line runs within fifty feet of the front door, having taken sixteen feet off of the school ground for right-of-way.

The enrollment of the pupils is 135, there being five districts combined in one school. There are four teachers. Mr. E. E. Blair, Township Trustee, reports the township out of debt.

Summary.

The building is old, improperly constructed, and is unsafe and unsanitary at the present time. If repaired, will have to be strengthened, newly floored and plastered, and two additional rooms built to accommodate the number of pupils in attendance. The location is very bad, being so low that it is surrounded by water in wet weather, and there is no means of drainage. I

would respectfully recommend that the building be condemned and a new one be erected in some better location.

Inspection made February 1, 1906.

After full consideration the following proclamation order was adopted:

PROCLAMATION OF CONDEMNATION.

Whereas, It has been shown to the satisfaction of the State Board of Health that the schoolhouse number 6 at Avon, Hendricks County, Indiana, is unsanitary and unfit for housing school children; therefore, it is

Ordered, That said schoolhouse is condemned and shall not be used for school purposes after April 1, 1906.

Any violation of this order shall be promptly prosecuted by the Attorney-General according to the statutes provided.

Ordered, That the next lot of report blanks for reporting births and contagious diseases be so arranged that three birth blanks be inserted for one contagious disease blank.

Ordered, That when a new lot of death certificates be printed that the word "chief" be stricken out in the phrase "chief cause" and inserting "immediate," making the phrase read "immediate cause."

Committee.—Upon suggestion of the President, Drs. Wishard and McCoy were appointed a committee to report at the next meeting on the advisability of requiring that certificates of births and deaths be reported occurring prior to the seventh month of gestation.

PROPOSAL FOR CO-OPERATION.

The following letter was read:

Department of Interior,
United States Geological Survey,
Hydrographic Branch,
Washington, D. C., January 30, 1906.

Dr. J. N. Hurty, Secretary State Board of Health, Indianapolis, Ind.:

Dear Sir—During my visit to your office on January 20th the proposition that the Geological Survey enter upon co-operative work with the Indiana State Board of Health was discussed briefly. It seems desirable to enter upon some negotiations with the object of bringing about some mutual arrangement whereby investigations of the character of stream waters of the State of Indiana may be carried on during the fiscal year beginning July 1, 1906.

There are several lines of investigation which would be profitable and beneficial to the interests represented by both parties above mentioned.

The first is a general investigation of the character of the water flowing in the streams of the State. The principal purpose of such work will be to determine the water resources and their damage by pollution. It is a generally accepted idea that waters in streams which drain inhabited countries are not constantly fit for domestic consumption in their raw state. In observing conditions in Indiana during the past few years it has become the conclusion that all of the Indiana drainage areas are at one or more points densely populated. Therefore, the above contention is true for the entire State. Accepting these premises, it is apparent that the cities using surface waters must eventually provide means for their purification. It is also true that the larger cities of Indiana must, for many reasons which will not be reviewed here, eventually take their supplies from the running streams. It follows that one of the most useful lines of investigation will be to determine the character of such waters and their variation from day to day, so that there will be on hand just the data necessary for the intelligent installation of purification systems. The determination most useful in such cases are turbidity, color, odor, total solids, suspended solids, lime, magnesia, iron, sodium, potassium, chlorides, sulphates, carbonates and bicarbonates. The usual practice in such an investigation as is here proposed is to establish permanent sampling stations at chosen points along the rivers and to have forwarded from such stations 4-ounce samples of water each day. These samples when received at the laboratory are then stored in larger bottles, each station being represented by a storage bottle in the laboratory, until a sufficient amount is accumulated to make it advisable to determine the ingredients and characteristics above noted. Such a result will represent the composite of the various samples. Generally such analyses are made every week or ten days.

If this arrangement is desirable an appropriation could be made by both parties. That made by the Survey could be expended in salary for a chemist to be furnished by the Survey, while the State appropriation could be expended for the salaries of local observers and for such transportation charges and laboratory equipment as would be found necessary, adjustments being made at the end of the year, so that the expense of each party could be equal. This is a very simple plan and of undoubted benefit. Its usefulness, however, is confined more or less to the future when the cities decide to provide water purification systems.

Another plan would involve an investigation of the pollution of the streams, that is, a determination of the effect of sewage and industrial wastes, and the extent of their influence down stream. You will note that such an investigation would be directed more exclusively toward sewage disposal than water supply. It seems as though under the prevailing conditions in Indiana this would be a more immediately useful work than that previously described. It would also involve investigations concerning the effect of various industrial wastes and the best methods of disposing of them or recovering valuable ingredients therein, which in practice has the same final result. Under such an arrangement the Survey would provide a man who would do practically all the field work and a part of that in the laboratory, while it would make use at the same time of some of the laboratory assistants which you have already provided.

It is hoped that you will give this matter your consideration and present it to the Board of Health for action if it is deemed wise.

Very respectfully,

M. O. LEIGHTON,

Hydrographer in Charge, Division of Hydro-Economics.

After consideration, it was moved by Dr. Davis, that, inasmuch as the means now at the command of the Board would not admit of co-operation as proposed, therefore, the Secretary should inform Mr. Leighton and say that the Board would present the matter to the next General Assembly and ask for a special appropriation for making sanitary stream surveys.

HAM PEDDLING.

Ordered, That the following letter should be sent out to all county health officers:

WARNING.

Dear Doctor—Men from Chicago dressed like farmers have been caught selling tainted hams in Indiana. They buy tainted hams from the packing houses, doctor them up, ship them to any point, then hire horses and wagon and peddle them at 2 to 3 cents under the market. The hams appear to be all right until slices are put into the frying pan, and then the taint fills the kitchen. The meat is unfit to eat. Many of these tainted hams were sold in Columbus, Greensburg, Mt. Vernon and other places. At Franklin one T. Scantlan was arrested upon information from Columbus, but was released on bail and disappeared.

Please inform the sheriff, city and town health officers and police authorities to be on the watch for ham peddlers. Also make the matter public in the papers.

P. S. The Laboratory of the State Board of Health is open for free food, drug and water analyses, also for free bacteriological and pathological examinations. Rules governing laboratory free work enclosed.

SECOND QUARTER.

Regular Meeting.

AFFAIRS CONSIDERED OF THE FIRST CALENDAR QUARTER OF 1906 AND THE SECOND FISCAL QUARTER OF 1906.

April 13, 1906.

Present: Drs. Davis, Wishard, McCoy, Tucker and Hurty.
Called to order by President Davis at 2 p. m.

Minutes of the last regular and special meeting of March 7th
read and approved.

Report of the Secretary for the first calendar quarter called for
and read as follows:

REPORT OF SECRETARY.

The statistics show for this quarter a marked diminution in diseases and death as compared with the same quarters in all of the statistical years beginning 1900. The death figures appear in the appended tables, also the prevalence of disease. Smallpox during the quarter shows a decided decrease, and the special table for this disease makes this plain.

	No. of Cases Reported.	Deaths.	No. of Counties Invaded.
January, 1905	238	7	27
January, 1906	80	0	10
February, 1905	381	8	35
February, 1906	152	0	15
March, 1905	251	1	29
March, 1906	124	0	16

By the above table comparison shows: Cases decreased 59 per cent.; deaths decreased 100 per cent.; area invaded decreased 55 per cent.

VISITS AND INSPECTIONS.

The Secretary during the quarter made five visits in answer to urgent invitations and herewith are full accounts of said visits.

REPORTS OF VISITS AND INSPECTIONS DURING THE QUARTER.

Rushville, January 9th.—The Secretary visited Rushville on this date to confer with Prof. William O. Headlee, County Superintendent, and the trustees of the county in the same way as set forth in the records of the visit to Connersville, and the same work was done and the same results secured as were so happily accomplished at Connersville. While there, W. H. Smith, city health officer, called my attention to a case of sickness which followed the administration of Dr. Hand's cough and croup cure. Accordingly a bottle of this medicine was purchased and examined in the laboratory. The symptoms recorded by Dr. Smith were those of the action of morphine, and so the medicine in question was examined for this drug. The analysis showed morphine to be absent and the depressant action noticed was, I believe, due to the presence of lobelia.

Lebanon, January 20th.—On the above date I visited Lebanon to address the Boone County Teachers' Association in regard to the public health work of the State Board of Health, and to confer in regard to school sanitation in that county. In addition to eighty teachers, there were present many citizens. The usual phases of the subject were gone over and a promise was given by a rising vote of all teachers present, that they would study the contagious disease circulars of the State Board of Health, and from time to time teach their contents to their pupils.

Connersville, January 25th.—The Secretary went to Connersville to attend the meeting of the sixth Councilor District of Physicians, to read a paper in regard to the work of the State Board of Health and to discuss the "Combat Against Tuberculosis." The meeting was very successful and was largely attended, and the Secretary believes that good results followed his visit. Advantage was taken of the visit to call upon the County Superintendent, Prof. Calvin Ochiltree, and arrange with him to later meet the trustees of the county and, if possible, effect an organization for health work in the schools. Prof. Ochiltree was very

much pleased to enter the work and agreed to call a meeting of the trustees on February 5th.

Connersville, February 5th.—In accordance with the arrangements made with Prof. Ochiltree on January 25th, I visited Connersville and met the trustees of the county whom he had kindly called together. School hygiene was fully considered in general conference and the following work was recommended to the Trustees:

That they should, as soon as possible, put all their schoolhouses in first-class sanitary condition. Windows were to be fixed so that they could be raised and lowered for purposes of ventilation. Doors were to be properly fitted and valve ventilators put into outside doors where transoms did not exist. Schoolrooms heated with stoves were to have jackets placed around the stoves, and teachers were to be instructed in thorough ventilation. It was agreed that trustees would order their teachers in cold weather to watch the students carefully, and if any of them should show sleepiness or heaviness, work would stop, and windows would be raised and the students marched around the room or given arm exercises while the air was being changed. It was also agreed that the water supplies would be looked after very carefully and that water buckets and tin cups would be entirely banished. Each trustee was asked to supply the address of his teachers to the State Board of Health, and there would be sent to them one of the envelope packages containing circulars upon the prevention of various diseases. The teachers were to inform themselves in regard to the contents of said circulars and at appropriate times teach from them to their pupils. Every one of the trustees expressed himself as highly pleased with the ideas advanced and all promised to do the very best they possibly could for the health of the school children under their charge.

Evansville, March 25th.—On this date I visited Evansville in order to deliver a public lecture upon the work of the State Board of Health and general hygiene. The visit was made upon invitation of the Mayor and the Monday Club. A large audience was in attendance which entirely filled and crowded the floors and gallery of Grace Methodist Church. The lecture was well received and a vote of thanks was passed. I believe much good will result from this visit.

A notable event concerning hygiene in the State occurred in Indianapolis during the week commencing March 5th. This was the Indiana Tuberculosis Exhibition, held in Tomlinson Hall.

The exhibition was essentially the same as was presented at New York, Philadelphia, Boston and Newark. It came direct from Newark to Indianapolis and from here it went to Chicago. The exhibit was under the direction of the Indianapolis Board of Health and the Indiana State Board of Health and was open every day and evening for one week. The program was as follows:

EVENING PROGRAM.

Opening Exercises, Monday, March 5th, 8 p. m.

Governor J. Frank Hanly, presiding.

The exhibition was formally opened by Hon. Charles A. Bookwalter, mayor of Indianapolis.

Address, Mr. Chas. R. Williams, editor of the Indianapolis News.

Tuesday, March 6th, 8 p. m.

Mr. John H. Holliday, presiding.

Address, "Sociological Importance of Tuberculosis," Dr. John W. McCaskey, Fort Wayne.

Wednesday, March 7th, 8 p. m.

Hon. John W. Kern, presiding.

Address, "The Hospital and the Sanatorium a Necessity in the Combat Against Tuberculosis," Dr. Hugh A. Cowing, Muncie, Ind.

Thursday, March 8th, 8 p. m.

Mr. Andrew M. Sweeney, president State Life Insurance Co., presiding.

Address, "The Open Air Treatment of Consumption," Dr. J. W. Pettit, Ottawa, Ill., director of the Ottawa tent colony.

Friday, March 9th, 8 p. m.

Hon. Charles Henry, presiding.

Address, "What Well People Should Know About Tuberculosis," Dr. Geo. T. McCoy, Columbus, Ind.

Saturday, March 10th, 8 p. m.

Hon. Hugh T. Miller, Lieutenant-Governor, presiding.

Address, "Municipal Control of Tuberculosis," Dr. Arnold Klebs, Chicago.

Address, "The Promise of Victory Over Tuberculosis," Dr. Robert Babcock, Chicago.

AFTERNOON PROGRAM.

Twenty-Minute Talks.

Monday, March 5th, 4 p. m.

"What is Tuberculosis?" Dr. Frank B. Wynn, Indianapolis.

Tuesday, March 6th, 4 p. m.

"How to Make Home Safe Against Tuberculosis," Dr. J. C. Blossom, Mt. Summit, Ind.

Wednesday, March 7th, 4 p. m.

"Tuberculosis a House Disease; It is Infectious but not Contagious," Dr. R. H. Ritter, Indianapolis.

Thursday, March 8th, 4 p. m.

"What I Saw at a Tuberculosis Sanatorium," Dr. Wm. George, Indianapolis.

Friday, March 9th, 4 p. m.

"The Sanatorium Treatment of Beginning Tuberculosis," Dr. Theo. Potter, Indianapolis.

Saturday, March 10th, 4 p. m.

"Tuberculosis Work of the Charity Organization," Dr. C. S. Grout, secretary, Indianapolis.

The total attendance was 5,128. All lectures were well attended. On Saturday night, when Dr. Klebs and Dr. Babcock spoke, and Lieutenant-Governor Miller presided, it was necessary to move some of the exhibit and place additional chairs to seat those in attendance. Ten thousand circulars concerning the prevention of tuberculosis were distributed. During the week the Indianapolis News printed two editorials upon the subject of preventing tuberculosis and gave daily illustrated accounts of the exhibit. Other papers gave good descriptions and abstracts of the addresses.

Through the influence of Mayor Bookwalter, whose heart and actions are in all good works, the City Hall was secured without rent. The forces of the city and the State Boards of Health unpacked and displayed the exhibit, a work which engaged ten men for twenty hours. The printing was given without charge by two large printing concerns, and the expenses—freight, hauling frames, burlap, expenses of speakers, etc., amounting in all to \$225—were paid from subscribed funds.

The pathological exhibit from the Medical College of Indiana, the medical department of Purdue University, attracted wide attention.

As part of the Secretary's report there is given herewith reports of the bacteriologist and chemist.

REPORT OF THE CHEMICAL LABORATORY FOR THE FIRST CALENDAR QUARTER OF 1906.

By H. E. Barnard.

I herewith submit a report of the work of the Chemical Department of the Laboratory of Hygiene since its establishment to date, together with an outline of proposed work for the coming summer and recommendations for desirable and necessary legislation.

Owing to the time spent in equipping the laboratory regular work was not begun until October, when inspectors were sent out and analytical investigations commenced. The laboratory has, therefore, been in active operation for six months. During that time we have analyzed 1,984 samples of food products and 541 of drugs. Of these analyses 2,177 have been reported in full in the November and January bulletins and need no further mention. In the last month we have examined 56 samples of molasses, 31 samples of honey, 40 miscellaneous food samples, 221 samples of drugs, such as sodium phosphate, sulphur, beeswax, etc. Of these unreported food samples 65 per cent. have been pure and 35 per cent. adulterated, and of the drug samples 38 per cent. have been pure and 62 per cent. adulterated. In passing I may observe that all the sulphur samples were adulterated, and that most of the beeswax was paraffin. So that to date the analytical work on foods and drugs has given us the following results:

Total number of samples examined.....	2,398
Total number of samples pure.....	995
Total number of samples adulterated.....	1,403
Percentage of adulteration.....	59.47

Much of our time has also been devoted to the sanitary analyses of waters, usually sent in by members of boards of health and health officers. We have examined 272 samples of water and have found 125 supplies polluted and unfit for drinking or domestic purposes. It is evident that the shallow dug well, supplied by surface water, is a menace to the health of the individual and the community. Of 113 shallow well waters analyzed 85, or 75.3 per cent., have been polluted by sewage. Many supplies were actually dangerous. Many others were evidently liable at any time to pass out of the safe class and become foci for the spread of water borne diseases. The driven or deep wells are a much safer source of supply. Our results show that 43.4 per cent. of the wells examined have been contaminated, but the large percentage of polluted supplies is in a great measure due to the fact that well owners call all bored or driven wells deep wells, when the results of our analyses indicate that they really should be classed as shallow or surface water wells.

The salary list of the laboratory for the last six months approximates \$2,100. The normal running expenses are not over \$100 a month. If, by reason of abnormally heavy expenses during the month of October incident to the collecting of 4,000 samples of food products, we set the total expense of the laboratory since it was opened for work at \$3,000, $\frac{1}{3}$ of which has been used in the water laboratory, we find that the cost of collection and analysis of each food sample has been 80.6 cents and of each water sample \$3.68. If on the other hand we credit the laboratory with the regular fees for the analytical work done, the fees paid the chemists of the Ohio Food Commission for example, it appears that the laboratory has earned:

In 301 milk analyses at \$2 per sample.....	\$602
In 2,097 food and drug analyses at \$5.....	10,485
In 272 sanitary water analyses at \$10.....	2,720
A total of.....	\$13,807

A practical saving to the State over the cost of operation of \$10,807.

Outline of Proposed Work.—We have still on hand about two hundred samples of food products collected last fall. These samples will be analyzed and the results reported in an early bulletin. We have on hand several hundred samples of drugs, chiefly tinctures, which are now in process of analysis. We also have before us the examinations of more than 200 samples of patent and proprietary medicine, such as blood remedies, catarrh and cough cures, toilet preparations, etc.

This work will soon be completed, and it will then be necessary to collect other samples. The present laboratory force can not afford to leave their analytical work to act as inspectors for more than brief periods, and it will be advisable that a deputy food and drug inspector be employed throughout the summer months. One of the most important branches of food inspection is that of dairy products. And beginning with the month of May we should endeavor to secure from cities and towns samples of milk for analysis. We shall have to rely upon local aid for making the collections, and we have already received assurances of assistance from several health officers. Unfortunately there is no adequate law now on the statutes by which we can punish the sellers of illegal milk, and we shall be forced to conduct prosecutions in local courts under local ordinances.

Many analyses of butters have shown that much oleomargarine is being sold as butter throughout the State, and investigation shows that no attention is paid by restaurant keepers and dealers to displaying the signs "Oleomargarine used or sold here." I find that there is on the statutes a law passed in 1882 which is amply sufficient to control the situation if it can be applied. There is some question as to its present legality, however, and I suggest that it be tested in court, that if necessary it may be amended so as to be operative.

I think it advisable to make a special study of the quality of the soft drinks so largely consumed in the summer months. Their composition is at least uncertain, and I believe in many cases of positive injury to the consumer.

The condition of the public and private water supplies is deplorable. While it may never be possible to eradicate completely the filthy disease producing family wells so situated as to be a cesspool for effluents from the barnyard and sink drains and privy, careful systematic inspection of public supplies is possible, and should be made in the future for the purpose of finding out the condition of the water systems. I have collected from every large town and city statistics of their public water supply, giving source, system of operation, per capita consumption and number of persons supplied. During the summer we should analyze as many of the public supplies as possible and arrange to make systematic inspections several times each year. For the isolated farmhouse well a chemical analysis is usually quite sufficient to determine the quality of the supply, but in order to arrive at a correct valuation of the purity of a public system operated perhaps under changing conditions both the chemical and the bacteriological analyses must be made.

It must be remembered that as the work of the laboratory becomes known throughout the State an increasing number of miscellaneous samples of foods, drugs and water is constantly coming in for analysis, and therefore due consideration must be given this routine work, which, while perhaps not of special importance to the public at large, is frequently of great value in impressing the worth of the laboratory upon individual citizens whose support we desire.

Suggestions for New Legislation.—The present pure food law, while admirable in its general plan is wholly useless as a means of bringing violators of the provisions of the law to justice. This is due to the fact that the penalty clause of the law was evidently "written in" by interests opposed to the bill, so that at present offenders must "knowingly sell" "articles injurious to health," thus making it necessary for the board to prove not only knowledge on the part of the seller but also the injurious composition of the goods. The bill should be simply amended so that the penalty clause will read in effect:

"All persons violating the provisions of this act shall be for the first offense subject to a fine of \$10 and costs; for the second offense subject to a fine of \$50 and costs; for the third offense subject to a fine of \$100 and costs, and three months in jail."

A specific milk law is absolutely necessary. Last fall I endeavored in two cases to secure conviction of persons guilty of selling preserved and watered milk. At Jeffersonville the grand jury refused to indict because it was so evident the offenders could not be convicted under the law, and at Terre Haute the justice of the peace before whom a case of watering was brought released the offenders because it was impossible to prove the vendor knew the milk to be adulterated. The loss of these two cases, one tried under the general food law and the other under the specific milk law, proved how futile it was to attempt to convict an offender under the present food statutes.

At the present time the supervision of the State Board of Health over public water supplies is limited and productive of small results. With a water laboratory at its disposal the board should be given control of all public supplies. If a law which has been in successful operation in Massachusetts for some years could be enacted, giving the supervision

of all public waters to the board, with authority to grant improvements and extensions after due examination of the conditions, not only would the quality of the present supplies be improved but waste of money and endangered health would be prevented.

The disposal of sewage, household and manufacturing wastes is also a problem capable of being efficiently attacked by means of the laboratory, and prompt measures are necessary if we are to conserve the purity of the streams and ponds which are the natural source of water supply.

While I realize the limitations placed upon the board in the matter of increasing the salary of the chemist, because the amount to be paid is fixed by statutes, yet I venture to suggest to you for your consideration the following facts:

First—\$1,500 per year is wholly inadequate compensation for the services required of your chemist.

Second—He is in charge of two laboratories, food and water, as either department is sufficient to command his undivided attention. The Board of Health of Massachusetts employs two chemists as heads of their food and water laboratories, paying each of them \$2,800 per year.

Third—He accepted this position with your board with full knowledge of present conditions, yet to do so refused a position as head of the government import laboratories at \$2,000 per year, for he received the assurance of your secretary that he would strive to have the salary increased at the earliest opportunity, and had faith that the board would be able to secure the necessary legislation.

The work required of the Laboratory of Hygiene is bound to increase rapidly as its availability and value become known, and the expense of operation will thereby become greater. As already suggested, food inspectors are necessary. A food law without inspectors to see that it is enforced is bound to become crippled and to lose its value. While I do not believe in a corps of deputies, I do think that we should have at least one competent man on the road all the time and the funds available for another if he is needed. We also must have funds to conduct prosecutions, for we can not always rely on local prosecutors to convict offenders. It is evident that more money is needed for the successful operation of the laboratory if it is to attain to its fullest usefulness, and I beg to suggest that an increased appropriation of \$5,000 be asked of the incoming legislature.

REPORT OF THE BACTERIOLOGICAL LABORATORY FOR THE FIRST CALENDAR QUARTER OF 1906.

By T. Victor Keene.

The Bacteriological Laboratory was put into commission January 1, 1906, although much work had been done previous to the formal opening of the laboratory. Since the laboratory has been opened a great deal of our time and energy has been spent in devising a systematic method of keeping a record of the work done, as well as devising methods of technique.

Method of Keeping Records.—It was early seen that it would be necessary to devise some method of keeping the records so that they

could be readily referred to. All the records are now kept as follows: We have one card containing a full history of the case. This history card gives the clinical history of the case and the record of when the specimen was sent to the laboratory, when it was received, when the report was mailed, and of course the results of the finding. This one card contains full information regarding the case. These cards are kept in consecutive order, each card being given a number. It is very obvious that the persons most liable to refer to this record are the physician in the case and the patient, so we have a cross-index system containing the name of the patient, the nature of the specimen, result of the examination and the file number of the card giving the complete history. This file by patients is kept alphabetically. Each physician of the State who submits for examination a specimen of any variety is given a separate card in our index file of physicians, and on this card we have a record of the date on which we made the examination for him for typhoid fever, diphtheria or tuberculosis. This card also refers back to the card containing the complete history of the case. The index to the physicians and patients is alphabetically arranged.

As a further aid in completing our cross-index we have a set of cards giving the name of both the physician and the patient, arranged by counties, so that at any time we can refer to any individual county and in a few seconds know just how much work and what variety of work the laboratory has done for any particular section of the State. This method of keeping the records is an original one. The idea of course is the card system in common use in many lines of business. These records are referred to much oftener than would be supposed. We have on a few occasions had physicians complain that reports had not been sent to them. Reference to the record shows at once the exact date the report was made. We have on two occasions had physicians allege that examinations made in our laboratory gave certain findings, while examinations made by other physicians gave entirely different findings. Referring to our record we are able at a glance to tell just exactly what our findings had been, and in both cases they were exactly similar to the findings reported by other physicians.

Letter to Medical Societies.—It has been very obvious for some time that the physicians throughout the State at large did not know about the laboratory. While the health officers of the State have been informed regarding the same, it seemed to us that they had failed to inform the physicians of their respective communities regarding the laboratory, as it was an almost daily occurrence for physicians from various parts of the State visiting Indianapolis to drop into the laboratory and express great surprise at the existence of the same. Various means of acquainting the profession of the existence of the laboratory, its scope of work, etc., were discussed, and it was finally decided to address a letter to the secretary of every medical society of the State apprising them of the fact that the laboratory was now ready to receive specimens and advising them how to ship the same, etc. We further asked the secretary to bring up the matter before the society and extend to the society an invitation to submit specimens to the laboratory. We have received answers from nearly half of the letters sent out, and nearly all the answers received seemed to show

that the writer had not been aware of the existence of this laboratory. However, this work will reach only a small percentage of the physicians in the State, and I would respectfully recommend that the board authorize the issuing and sending out of a letter to every physician of the State apprising him of the existence of the laboratory and inviting him to send in specimens. The cost of such a letter need not be great. I feel certain that the expenditure would be justified, and that it will greatly increase the amount of service we would render the public.

Organization of Laboratory Proper.—There are a great many solutions, reagents, stains and varieties of culture media which have to be made up in the laboratory. We have practically spent the greater part of the time since the first of the year in getting our laboratory stocked with these things.

We have on hand at this time twelve litres of Ziehl Neilson's Carbol-fuschin, eight litres of Gabbet's Sulphuric Acid decolorizing solution, three litres of Loeffler's Methylene Blue Solution, one litre of Wright's Blood Stain; six litres of Delafield's Haemotoxylin Solution, one litre of Eosin, and numerous other stains in smaller quantities. These stains, which we have made up in such large quantities, are stains which improve as they become older, and it is always a matter of great convenience to a laboratory to have old stains to use, as they are much more reliable and certain in their results. We have the stains made up to do practically any variety of bacteriological and pathological work, although, of course, we do not have the stains made which deteriorate when in solution. In addition to the stains we have made up and ready for immediate use the various hardening and fixing solutions used for the preserving of tissues, including the Kaiserling solution for the preservation of gross pathological specimens. We are from time to time, as opportunity offers, adding or collecting interesting pathological specimens, and while we may not be able to make much of a show at this year's meeting of the Indiana State Medical Society, it is our ambition to each year have an interesting exhibit before the State Medical Society from the Laboratory of Hygiene of the State Board.

We have made up a large variety of culture media, including the various sugar broths, gelatines and agars. While we fully realize that for the time being at least research work in the laboratory must be made secondary to the routine work, we have, however, been doing such as our time would allow. Practically all the research work we have done has been along the lines of culture media.

Diphtheria Serum.—The manufacture of blood serum for diphtheria diagnosis is a difficult proposition, as the media dries up rapidly and tends to become contaminated very easily. Within the last few months Westbrook, superintendent of the Laboratory of Hygiene of the Minnesota Board of Health, published a paper advocating the use of a small amount of glycerine in the blood serum, claiming for it that such serum did not dry out so rapidly, and that the presence of the glycerine would prevent the growth of certain varieties of bacteria. This was in keeping with a well-known fact that vaccine virus if marketed in glycerine did not tend to become contaminated, as the glycerine was sufficiently antiseptic to destroy large numbers of bacteria. Westbrook further claimed that the

diphtheria bacillus was not affected by glycerine, but grew readily. It is very obvious that if his claims were warranted the glycerine serum would be much better than serum without it, so we have been experimenting with blood serum with various percentages of glycerine in it, and have found that blood serum containing 5 per cent. glycerine makes an admirable culture media for diphtheria bacilli. We expect to use this glycerine serum instead of the plain serum hereafter, as it is superior to plain serum.

Typhoid Fever.—Conrade, in the *Deut. Med. Woch.*, January 11, 1906, published a paper on the result of some observations he had been making on the early isolation of typhoid bacteria from the blood of typhoid patients. It is a well-known fact that in practically all cases of typhoid fever by the time the individual sickens with the disease the typhoid bacteria are in the blood. It is further well known that there are several features which make its isolation very difficult, the most prominent of which is the fact that shed blood is about ten times as germicidal as blood in the blood vessels, due to the coagulation of the blood and the breaking down of the white blood cells into nucleic acid. Conrade's work was as follows: He drew blood from patients into a sterile pipette, in which was a small amount of a 5 per cent. solution of ox bile, the object of the ox bile being to prevent coagulation of the blood. This blood was then put in a culture media in a broth of special formula, and the typhoid bacteria grew readily in most cases. It at once occurred to us that this could be utilized in a practical way in a public health laboratory, and we are at present working on the following hypothesis:

We know absolutely that we can get typhoid bacteria from the blood the first or second day. We know further that it is only a matter of a few hours before they have grown in sufficient numbers in the tube that we can see the actively motile bacteria under the microscope. The identity of the typhoid bacteria can be established by discovering a motile organism present, and subjecting this motile organism to the action of a typhoid bacteria it will agglutinate; if it is not the typhoid organism it will not agglutinate, so the plan we have in mind for utilizing these observations in this laboratory was as follows:

We would put out an outfit composed of a small sterile pipette, sealed at both ends and having in its bulb some of the ox bile solution. The physician would be instructed to break off both ends of the pipette, which would of course allow the bile solution to flow out, but a sufficient amount would adhere to the walls to prevent the blood from coagulating. He would then draw his blood under aseptic precautions and inoculate a tube of media of the variety needed. This he would ship to us and we would incubate it, and at the end of twelve hours examine the culture to determine whether or not there were any motile organisms present. If there were any motile organisms present we would test the organism with a known typhoid serum, and if the same agglutinated we would be certain that the organism was a typhoid organism. The difficulty in the way of making the test lies in the fact that the postal regulations do not allow the shipping of liquid media, so it is necessary to devise some variety of solid media which would work. We have spent a great deal of time working with various modifications of gelatine and agar, all of

which we have found unsatisfactory. We are at this time working on a culture media the solid part of which will be composed of a low melting paraffin, the idea being that this being a solid media it will conform with the requirements of the government in regard to shipping, but being a low melting paraffin it will at once become a fluid media when put into the incubator. The practical advantage of this work, if after experimentation it is found to be as practical as it seems to be in theory, we will be able to arrive at a diagnosis of typhoid fever at the very beginning of the disease, as early as the first or second day; whereas with the Widal Reaction, which we at present use, and which is in common use in public health laboratories, we are only able to arrive at a diagnosis not earlier than the fifth day, and usually about the seventh or eighth day.

Below is subtended a statistical table of the amount of work done in the laboratory since the first of the year per county:

TUBERCULOSIS.

<i>County.</i>	<i>No.</i>	<i>County.</i>	<i>No.</i>

The following circular letter from Surgeon-General Wyman was presented for action:

March 15, 1906.

J. N. Hurty, M. D., Phar. D., Secretary State Board of Health, Indianapolis, Ind.:

Sir—In accordance with the provisions of section 7, act of Congress approved July 1, 1902, I have to inform you that the Fourth Annual Conference of State and Territorial Boards of Health with the Public Health and Marine Hospital Service will be held at the New Willard Hotel, Washington, D. C., on Wednesday, May 23, 1906, at 10 o'clock a. m.

Your board will be entitled to representation in the said conference by one delegate. It is requested that your board will submit a type-written report of any State or municipal health legislation enacted during the past year in relation to public health, sanitation or kindred subjects. This report will be for publication in the transactions and will not be read at the meeting.

A program of the subjects to be discussed will be announced in a subsequent communication.

I would request that I be informed in advance of the name of the delegate who will represent your Board.

Respectfully,

WALTER WYMAN,
Surgeon-General.
J. W. K.

After consideration it was ordered that the Secretary should be the delegate to represent the Board at the said Conference.

Ordered, That an annual health officers' school be held each year the last Thursday and Friday of June, and the Secretary to prepare programs.

Ordered, That Drs. Tucker and McCoy represent the Board as delegates to the annual meeting of the National Association for the Study and Prevention of Tuberculosis, which would be held May 17th, 18th and 19th in Washington, D. C.

Ordered, That copies of the following circular be sent to the presidents of all county medical societies:

CIRCULAR.

Dear Doctor—It will be appreciated if you will call the attention of your Society to the fact that the Bacteriological Department of the Laboratory of Hygiene, of the State Board of Health, is in good working order and ready to receive specimens for examination. We have already received a great many specimens for examination from various parts of the State, but we have not received as many from your locality as we expected to receive.

There is enclosed herewith a circular of directions as to the manner of shipping specimens. We are permitted by law to undertake only such work as is related to public health, and to this end we examine sputa submitted for examination for tubercle bacilli; samples of blood from suspected typhoid fever patients for the Widal Reaction, and cultures made from sore throats, suspected to be cases of diphtheria.

We are prepared also to undertake practically any laboratory examination that might be desired by the physician, provided, of course, the same is a matter of public health administration. We will examine urine for tubercle bacilli, although we do not make a chemical examination of urine nor examine for any other elements than tubercle bacilli. We will mail to any physician, requesting the same, a full set of outfits for the collection and shipping of specimens intended for examination to the laboratory. We shall be glad to send you an equipment of the same, should you desire it.

We hope to make the Laboratory a power for good in the State, and are desirous that the physicians of your Society and section of the State become as interested and use the Laboratory as freely as the physicians of other sections of the State have already done.

SPECIAL MEETING.

May 18, 1906.

Special meeting called to consider the sanitary surveys of certain schoolhouses and to take proper action,

Called to order by the President at 2 p. m.

Present: Drs. Davis, Wishard, Tucker and Hurty.

Sanitary surveys of the schoolhouses at West Newton and Valley Mills read as follows:

SANITARY SURVEY OF SCHOOLHOUSE AT WEST NEWTON, DECATUR TOWNSHIP, MARION COUNTY.

By J. N. Hurty.

In response to an invitation of the Trustee, Mr. J. D. Sanders, and several patrons of the school, the State Health Officer made an inspection of the schoolhouse at West Newton, April 23, 1906. This schoolhouse is known as West Newton School No. 3.

Site.—The site comprises about two acres. It is high and rolling and well drained. It is in every way satisfactory.

The Building.—The building is frame, built in 1876. There are three rooms above and three below; no basement; narrow box winding stairway, heated by Ideal Heaters, which are not satisfactory. There are two fire escapes on the building. The foundation is brick and somewhat washed by water, but not dangerous, nor could it be termed bad. The steps are in bad repair; the floors are worn and very poor, yet the building can not be said to be dilapidated.

First Floor.—The building is entered by a vestibule facing the west. From the vestibule a narrow winding stairway leads to the upper story. Two doors open from the vestibule, one into the primary room and one into the room for the Sixth and Seventh Grades.

Primary Room.—It is 24x30x12, total 8,640 cubic feet, furnishing space for forty children. There are 41 seats; enrollment 41, average daily attendance 32. The light is admitted from three sides and the teacher is compelled to look into the light. Considerable space in this room is occupied by the Ideal Heater. Blackboards glossy and teachers complain of this.

Sixth and Seventh Grade Rooms.—This room is 24x30x12, total 8,640 cubic feet. Enrollment 26; average attendance 22. Floors worn, glossy blackboards. Much space in this room is occupied by the large Ideal Heater. It is lighted from three sides and the teacher is compelled to look into the light.

Third, Fourth and Fifth Grade Rooms.—This room was built on to the main building some time after first construction. It is entered by a vestibule built inside the room. The said vestibule is used as a cloak room. The room is 30x30x12, which is 9,600 cubic feet, supplying space for 48 pupils. There are 50 seats, enrollment 46, average attendance 40. Glossy blackboards, floors worn, considerable space occupied by the large Ideal Heater. The light is admitted from three sides, and the teacher is compelled to look into the light.

Second Floor.—Second floor is reached by a winding narrow box stairway, which opens into a vestibule. Vestibule is lighted by two windows and is used for a cloak room. One room opens into a narrow

hall, which has been created by building a partition through a room which is immediately above the primary room. The room partitioned off as described is used for a laboratory, is lighted from three sides, floors are worn, blackboards glossy, and is heated by the Ideal Heater in the room below.

Eighth Grade Room.—This is the high school room and it is 30x30x12, which makes 9,600 cubic feet, space for 48 pupils; enrollment 52, and average daily attendance not given. The room is lighted from three sides. Glossy blackboards, floors worn, heated by the heater in the room below. Teacher faces light.

Third and Fourth Grade Room.—This room is the second story of the addition which has before been described. It is 30x30x12, making 9,600 cubic feet, furnishing room for 48 pupils. It contains 50 seats; glossy blackboards; lighted from three sides; the floors are worn. The teacher is compelled to look into the light. Warmed by the Ideal Heater in the room below.

Remarks.—Whooping cough prevailed in the school towards spring, but no epidemic diseases. Coughs, colds and catarrhs prevalent every winter.

Opinion and Recommendations.—It is very plain that this schoolhouse is not sanitary. On account of defective lighting the eyes of both teachers and pupils are being injured, and on account of defective heating and ventilation their general health is being injured. It is very apparent that the building can not be repaired so as to make it sanitary, and I therefore recommend its condemnation.

After consideration of the above survey, and after hearing arguments from patrons for and against condemnation, which arguments were duly considered, the following order of condemnation was unanimously passed:

PROCLAMATION OF CONDEMNATION OF THE SCHOOLHOUSE AT WEST NEWTON, MARION COUNTY, INDIANA.

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at West Newton, Decatur Township, Marion County, Indiana, is unsanitary and unfit for school purposes; it is therefore

Ordered, That said schoolhouse is condemned and shall not be used for school purposes from this date, May 18, 1906, forward. And in the event of the trustee or any school teacher or any person violating this order of condemnation, then the Secretary of the State Board of Health shall duly inform the Attorney-General, who will bring prosecution as in the statutes provided.

REPORT OF SANITARY SURVEY OF VALLEY MILLS SCHOOL- HOUSE, MARION COUNTY. MAY 14.

Site.—The site is excellent in every way. It is high ground and surrounded with few trees.

Building.—The building is an old frame with a much worn foundation, holes are torn or broken in, and there are cracks in the foundation in several places. The building is one story. The plaster is off in places and there are cracks in the ceiling and walls.

Eighth Grade Room.—This room is 24x32x14 feet, making the cubic contents 10,752 feet. This supplies space sufficient for 51 pupils. The enrollment is —, and the attendance is —. The light is introduced from two sides. On the west side there are four windows and on the south there are two windows. The teacher is compelled to look into the light. Each window has eight glass lights, 12x18 inches, making the total glass area for the whole room of 72 square feet. The required amount would be 128 square feet. The room is therefore not properly lighted. The blackboards are glossy and chipped in places. The room is heated by a stove and there are no ventilating shafts.

Primary Room.—This room is 24x24x14, making in all 6,064 cubic feet, furnishing space for 30 pupils. The enrollment is —, the attendance is —. The arrangement is such as to compel the teacher to look into the light. The room is heated by a stove. There are no ventilating shafts. The floor is bad.

Outhouses.—These are well separated and are in passable condition.

Water Supply.—The water is carried from a well at a farmhouse, about one-eighth of a mile distant. The well at the schoolhouse furnishes water which is impure and is not liked by the children.

Opinion and Recommendations.—It is my opinion that this schoolhouse is unsanitary in every particular and unfit for school purposes. I recommend that the same be condemned.

After consideration of the above survey, and after hearing arguments from patrons for and against condemnation, which arguments were duly considered, the following order of condemnation was unanimously adopted.

PROCLAMATION OF CONDEMNATION OF THE SCHOOLHOUSE AT VALLEY MILLS, DECATUR TOWNSHIP, MARION COUNTY, INDIANA.

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Valley Mills, Decatur Township, Marion County, Indiana, is unsanitary and unfit for school purposes; therefore it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for said purposes from and after this date, May 18, 1906, and in the event of the trustee or any school teacher or other person using the said schoolhouse for school purposes, then the Secretary of the Indiana State Board of Health shall duly inform the Attorney-General, who will bring prosecution as in the statutes provided.

Passed by the Indiana State Board of Health in special session,
May 18, 1906.

Documents concerning the schoolhouse at Monument City, Polk Township, Huntington County, were read as follows:

MONUMENT CITY, HUNTINGTON COUNTY.

Monument City, Ind., 1906.

To the State Board of Health:

We, the undersigned, residents and patrons of School District No. 7, in Polk Township, Huntington County, Indiana, respectfully request that you make an examination of the school building in said district as to its fitness for school purposes, and that you make known its condition to the Trustee of said Township.

Geo. C. King, John Ammerman, Mathias Chrisman, Homer Dillin, David M. Prilaman, Joseph Forest, S. J. Ellis, John A. Ellis, Seth Davis, S. J. Fair, Monroe Bailey, Stephen Weeks, J. F. Vickery, C. E. Hefner.

REPORT OF SANITARY SURVEY OF SCHOOLHOUSE AT MONUMENT CITY, HUNTINGTON COUNTY, POLK TOWNSHIP.

Survey Made May 10, 1906, by J. N. Hurty, Secretary.

Site.—The schoolyard covers about one acre and is well situated. The ground is high, gravel is found a short distance beneath the surface and the natural drainage is excellent; so good, indeed, as not to require tiling.

Building.—The building is brick with a stone foundation; no basement, two stories, two rooms, built about twenty-five years ago. The walls are sound; no cracks. The entrance is by one front door, which opens into a small vestibule lighted by one window. No provision for warming vestibule.

Primary Room.—The primary room is on the first floor and is entered through a door from the vestibule. It is 36x24x12 feet, which makes 9,504 cubic feet, furnishing space for 47 pupils. The room contains 52 desks, enrollment 43, average attendance 40. The desks are of the old wooden variety, yet are of good condition. Wraps are hung on hooks which are attached to the east wall of the room. The floor is in bad repair. Light enters by six windows, three on each side. Each window contains eight panes of glass, 12x18 inches. This does not furnish enough light, for the total number of square feet amounts to 72, and if the rule of one-sixth of floor area should be in glass is followed there should be 192 square feet. In other words, there is not quite one-half as much light as sanitary science demands. The blackboards are slate and the room is warmed by a stove. There are no ventilating shafts.

High School.—The high school room is on the second floor and is reached by a narrow stairway of twenty steps, in which there is one turn. This stairway is not of the variety known as "box stairway," but is, nevertheless, such in a general way, because it is so narrow and so confined in a small vestibule. If this schoolhouse were ever to catch on fire there would certainly be a pile of corpses to count in and upon the

stairway. This schoolroom is 36x22x10, making 7,920 cubic feet, which space is sufficient for 39 pupils. There are 40 seats, enrollment is 29, and average attendance 27. Floors are worn; no ventilating shafts; blackboards are slate. The room is lighted by six windows, three on each side. Each window pane is 12x18 inches, eight in each window, making 72 square feet of lighting surface. The sanitary requirements for lighting surface for this room would be 192 square feet. The room is heated by a stove.

The Water.—The water is supplied from a drilled well, which the trustee said was 110 feet deep. From this it is fair to presume the water is potable.

Outhouses.—The two outhouses are ordinary frame and are widely separated.

Sickness.—The testimony was to the effect that no epidemics had prevailed among the school children within the last few years; but, as would be expected, coughs, colds, and acute catarrhs were all frequently reported.

Recommendations.—As the above report, measurements and all considerations show this schoolhouse to be unsanitary and not up to standards, I therefore recommend its condemnation.

After due consideration the following order of condemnation was unanimously adopted:

PROCLAMATION OF CONDEMNATION OF THE SCHOOLHOUSE AT
MONUMENT CITY, POLK TOWNSHIP,
HUNTINGTON COUNTY.

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Monument City, Polk Township, Huntington County, Indiana, is unsanitary and unfit for school purposes; therefore, it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for said purposes from and after this date, May 18, 1906. And in the event of the trustee or any school teacher or other person using the said schoolhouse for school purposes then the Secretary of the Indiana State Board of Health shall duly inform the Attorney-General, who will bring prosecution as in the statutes provided.

REPORT OF SANITARY SURVEY OF SCHOOLHOUSE AT ROCK
CREEK CENTER, ROCK CREEK TOWNSHIP,
HUNTINGTON COUNTY.

Survey Made May 10, 1906, by Trustee W. D. Cline.

Site.—The site is bad. It is low, wet and undrained, and can only be drained with difficulty.

Building.—The building is brick with stone foundation, built in 1890. It was originally a one-room building, but lately it had been made into two rooms by a rough board partition. The building is entered by a

vestibule provided with hooks for wraps. The vestibule is not warmed, and the schoolroom is warmed by stoves. There are large cracks at the angle formed by the ceiling and side walls. There is no basement.

Primary Room.—This room is 27x30x14 feet, making 11,340 cubic feet; this is only room for 56 pupils. There are 40 desks; enrollment —; attendance 27. The room is lighted by three windows on the west side and one on the north side. They are so situated as to admit light from the right side of the children. Each pane of glass is 8x22 inches, making 58 square feet. The floor area is 810 feet, and there should be one-sixth of this area in glass—this would require 135 square feet. The room, therefore, has only about one-half as much light as sanitary conditions require. The floor is in good condition. The desks are almost new and of several different sizes.

High School Room.—This room is 16x25x14, making 6,720 cubic feet, furnishing space for 34 pupils. There are 25 seats. The enrollment is —; attendance 20. The room is lighted by three windows, two on the east and one on the north; each window has twelve panes of glass, 12x22 inches, making in all 58 square feet of glass surface. The floor area is 264 square feet, and one-sixth of this, or 44 square feet of glass, is required. The lighting is therefore sufficient. The light falls from the left shoulder of the pupils. The blackboards are slate.

Opinion and Recommendations.—I am decided of the opinion that the site of this school building is damp and low and difficult to drain and should be condemned. The school building has no basement beneath. is damp, hard to heat by stoves, has no ventilating ducts, the lighting of one room is insufficient, the vestibule is not heated and is an unfit place for wraps. I recommend that this building be condemned for school purposes.

After due consideration of the above survey, the following order of condemnation was unanimously adopted:

**PROCLAMATION OF CONDEMNATION OF THE SCHOOLHOUSE AT
ROCK CREEK CENTER, ROCK CREEK TOWNSHIP,
HUNTINGTON COUNTY.**

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Rock Creek Center, Rock Creek Township, Huntington County, Indiana, is unsanitary and unfit for school purposes; therefore it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for said purposes from and after this date, May 18, 1906. And in the event of the trustee or any school teacher or other person using the said schoolhouse for school purposes, then the Secretary of the Indiana State Board of Health shall duly inform the Attorney-General who will bring prosecution as in the statutes provided.

Passed by the Indiana State Board of Health in special session,
May 18, 1906.

SANITARY SURVEY OF SCHOOLHOUSE AT KENNARD, GREENSBORO TOWNSHIP, HENRY COUNTY.

By Deputy E. H. Brubaker.

New Castle, Ind., May 4, 1906.

The building is a frame structure, which was originally one-story, consisting of three rooms and a hallway, with no basement. Then some years later the second story was added, making six rooms in all. The building is located on a lot of ample size and is reasonably well drained, with gravel walks leading up to the building from the street. The building is in a bad state of repair. On windy days the building can be felt to vibrate under the influence of the wind. On one extremely windy day the teacher felt alarmed, fearing that the building would collapse under the force of the wind. In one place the weather boarding is off, exposing the framework, which is decayed.

The blackboards are all slate and in good state of repair. The plastering is cracked and in some places is off. The rooms are all lighted by narrow windows and the north room on the ground floor is very dark, especially on cloudy days.

The rooms are all heated by stoves and on moderately cold days it is impossible to get any of the rooms warm enough, sometimes the temperature of the rooms is not above 60 degrees all day. This is especially true on windy days.

I was informed that there were many cases of colds and coughs, sore throats and pneumonia and allied ailments among the pupils and teachers, attributed to the cold and illy ventilated condition of the rooms. Many of the days the teachers and pupils wear their heavy wraps during school hours.

The stairs leading to the second floor are steep and dangerous, rising 14 feet in the same distance, and are protected by no railing. They are 9 feet wide. In all of the rooms the floors are in bad repair, with holes in same with boards and pieces of tin nailed over them.

In the lower rooms the wraps and the dinner pails or baskets are hung in the schoolrooms. Upstairs they are kept in the hall.

The desks and other fixtures are only in a fair state of repair.

The only means of ventilation is by windows.

The enrollment during the past winter was as follows: Primary room, 35; second room, grades two and three, 38; third room, grades three and four, 38; fourth room, 38; fifth room, 38; high school, 28; making a total of 215 pupils. The enrollment will show an increase for next winter. I was not able to learn the average attendance for last winter.

A large number of the patrons are complaining and are dissatisfied with the building.

The girls' outhouse is 112 feet north of the west wing of the building and the boys' outhouse the same distance north of the east wing of the school building. The two being about 100 feet apart.

The schoolhouse is in a very unsanitary and unsafe condition, the latter being enough to condemn it. I would recommend the condemnation of the schoolhouse for school purposes.

After due consideration of the above survey, the following proclamation of condemnation was unanimously adopted:

**PROCLAMATION OF CONDEMNATION OF THE SCHOOLHOUSE AT
KENNARD, GREENSBORO TOWNSHIP, HENRY COUNTY.**

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Kennard, Greensboro Township, Henry County, Indiana, is uhsanitary and unfit for school purposes; therefore it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for such purposes from and after this date, May 18, 1906, and in the event of the trustee or any school teacher or other person using said schoolhouse for school purposes, then the Secretary of the Indiana State Board of Health shall inform the Attorney-General, who will bring prosecution as in the statutes provided.

Passed by the Indiana State Board of Health in special session, May 18, 1906.

**REPORT OF SECOND SANITARY SURVEY OF SCHOOLHOUSE AT
AVON, WASHINGTON TOWNSHIP, HENDRICKS COUNTY.**

By J. N. Hurty.

E. E. Blair, Trustee.

In response to a petition from patrons, J. L. Anderson, Deputy State Health Officer, made a sanitary survey of the schoolhouse at Avon, February 1, 1906. Said survey was duly presented to the State Board of Health at a special meeting held March 7, 1906, and after due consideration of the evidence presented the schoolhouse was condemned.

Due notice of the complete proclamation of condemnation was duly posted on the schoolhouse and the trustee was formally notified by Dr. W. J. Hoadley, Health Officer of Hendricks County.

Now come Edward Mills, D. W. Carter, and C. D. Hollingsworth, composing the Advisory Board of Washington Township, Hendricks County, and present the following petition, which was received April 28, 1906:

"We, the undersigned citizens, taxpayers and patrons of School No. 6, in Washington Township, Hendricks County, State of Indiana, respectfully petition you to reconsider the action of your Honorable Board concerning the inspection of Schoolhouse No. 6, located at Avon, in said Washington Township, and for the purpose of reconsidering the matter we desire to call your attention to the following facts:

First. The building as it now stands was originally built as a two-story building and was not built as a one-story building and an additional story added thereto, as represented to you.

Second. The roof of said building is a good slate roof, and in good condition except in two places around flues.

Third. The floors of the various rooms are considerably worn, but these conditions could be remedied by reflooring.

Fourth. If the plan for heating the house is not sufficient we believe that it could be made sufficient without much expense.

Fifth. While the plastering is cracked in a few places, it is only where the leaks above referred to have damaged it, and it could be repaired with little expense.

Sixth. The outer walls of said building are apparently in as good condition as they were when first constructed. Upon careful examination we are unable to find any serious defects or cracks in the outside walls and only one small crack in the partition wall between the two lower rooms.

Seventh. There has been some drainage constructed for the schoolhouse lot, and if it is not sufficiently drained it will be a very easy matter to put in whatever amount of ditching is necessary to drain the same.

Eighth. The schoolhouse as it now stands is centrally located, and a good barn and sheds have been erected on the schoolhouse lot to accommodate the scholars and patrons of the school. Said buildings may not be entirely modern, but the same is well ventilated and lighted and if its sanitary conditions can be improved we will appreciate any suggestions you desire to make.

Ninth. As persons interested in having the right thing done we believe that this schoolhouse building is sufficient to accommodate the demands of the district in the township in which it is located, and that it can be put in the proper condition at very little expense. We also believe that it will be an unnecessary and useless burden to the taxpayers of the township to have the building torn down and a new one constructed.

We, therefore, ask you to consider the above facts and we ask you to make a careful investigation as to the true situation in regard to the sufficiency of the present building for school purposes."

D. W. CARTER,

EDWARD MILLS,

C. D. HOLLINGSWORTH,

Advisory Board.

SECOND SANITARY SURVEY OF SCHOOLHOUSE.

Upon Monday, April 30, 1906, State Health Officer made a second sanitary survey of the said schoolhouse as follows:

Site.—The schoolyard is about two acres in extent. One-third is low wet ground. Trustee E. E. Blair, upon being questioned, said that in the winter of 1905 and 1906 fully one-third of the schoolyard was covered with water for a period of many days. At one time it was necessary to wade through water two inches deep, with mud beneath, to get coal from the coalhouse immediately in the rear of the schoolhouse yard.

Mr. J. Langston, Principal, upon being questioned, said that in rainy weather the schoolhouse was very damp; the walls at times being so moist that the blackboards could not be used. At these times the atmosphere in the room felt damp.

The trolley line runs within 42 feet of the front door and the noise of the passing cars is bound to be detrimental to the school, as attention to books and recitations will be disturbed and confusion caused.

The water supply is from a dug well which is 18 feet deep and which is immediately in the center of the trolley track. The top of the well has been covered over with brick and the water piped to a pump 12 feet away. This well may become polluted at any time through the dropping of excreta upon the track from passing trolley cars.

Conclusion.—The site is unsanitary and unfit in every particular for a schoolhouse.

Building.—The building is brick with a brick foundation. No basement, two stories high, four rooms, built in 1884. Cracks were discovered to exist on all sides of the building. The roof is slate and although not waterproof at the present time, could easily be made waterproof. The building is heated by two Peck-Williamson Ideal Heaters. These heaters are in the lower rooms and take up a great deal of space. According to the plan of these heaters they receive cold air from the outside and after warming introduce it into the lower and upper rooms.

There is also an appliance by which these heaters are designed to remove the foul air from near the floor of each room. According to the testimony received from the trustee, teachers and pupils these heaters are not adequate and do not maintain a uniform or proper temperature and do not properly pump the foul air away. At this point I will say that if the heaters were satisfactory they would be the first ones of the kind that I have ever known which were.

A winding stairway, 4 feet wide with 23 steps, leads to the upper story. The outer edge of the stairway is protected by a strong banister and the entrances to the two rooms in the upper story are through two small doors, one on each side of a narrow vestibule. This constitutes a firetrap, and if the house should catch on fire while school is in session many lives would doubtless be lost upon this steep, winding, narrow stairway. If the schoolhouse is remodeled the stairway must be so constructed as to lessen to the fullest degree possible the danger from accident by fire.

The total enrollment during the last term was 135, with a daily average attendance of 104. This makes an average absence of 31, or 22.9 per cent. Much of this absence was caused by sickness, for coughs, colds, catarrhs, headaches, and rheumatism prevailed among the children. The children are reported as continually complaining of cold feet in cold weather.

A marked unsanitary feature of the present building is the fact that the cold damp halls is the only place for keeping wraps.

Intermediate Room.—On the first floor, 30x21½x12 feet, making 7,740 cubic feet in all. The room contains 38 seats, with 40 pupils enrolled, average daily attendance 26. The cubic space is sufficient. The floor is badly worn. Light falls over the right shoulders of the pupils. Blackboards are painted, but not glossy. Ceiling cracked in several places. Seats vary in size to fit pupils of different ages.

Primary Room.—On first floor, on west side, 30x21½x12, 7,740 cubic feet in all; 36 seats, 42 pupils enrolled, average daily attendance 32. There is an abundant cubic space for each pupil. Floor much worn. Blackboards painted, but not glossy. Ceiling much cracked. Seats vary in size to fit pupils of different ages.

Grammar Room.—This is the east room, in second story, 30x21½x14, making 9,030 cubic feet. The room contains 33 seats, 26 pupils enrolled, average attendance 24. There is ample cubic space for each pupil. The light falls over the right shoulders of the pupils. Blackboards painted, but not glossy. Ceiling is cracked. Floor much worn. Seats are proper size.

High School Room.—This is the west room in second story, 30x21½x14, making 9,030 cubic feet in all; 25 seats, 27 pupils enrolled, average attendance 22. Floor badly worn. Cracked ceiling. Blackboards painted, but not glossy. Light falls over left shoulders of pupils.

History.—There were four teachers in this building last year. The Principal, Mr. J. Langston, says the schoolhouse is very unsanitary. He asserts that the heating and ventilating are far from what they should be and that the almost continued dampness is a cause of rheumatic pains. One lady teacher last term quit on account of bad health after three and one-half months service. She claimed the unsanitary conditions of the schoolhouse caused her illness. The teacher who took her place taught five weeks, for she claimed her health was being injured by the unsanitary surroundings, namely, continued dampness, uneven warming and poor ventilation.

Trustee Blair reports that none of the four teachers will accept a position for the next year, although the patrons of the school especially request that they be employed again. The refusal of the teachers to teach in this school building is announced by them to be because of the unsanitary surroundings.

Opinion and Recommendations.—I am very confident that the schoolhouse at Avon is unsanitary. It is insufficiently ventilated and warmed, and in two of the rooms the light is introduced over the right shoulders of the pupils. It is also unsanitary because of its dampness and because of the cold damp halls where wraps are kept.

The water supply is not now polluted, but the well is in a dangerous situation, and may become polluted at any time, and this threatens a further unsanitary condition. The site has already been shown to be low and wet. It could be drained and filled at considerable expense.

I recommend that the former condemnation be not repealed and that it do stand.

In order to put this schoolhouse in good sanitary condition the grounds must be well drained and filled; a basement must be placed under the entire building, with foundation walls built of stone or vitrified brick or other impervious material. The said basement must have a cemented floor and an efficient heating and ventilating system must be supplied. Cloakrooms properly warmed, lighted and ventilated, must be constructed. As for the enrollment for next year, according to the estimate of the trustee, it will be 160, and so it is plain that an addition must be built to the present schoolhouse if it is remodeled, for there is not a square foot of space for more pupils in the present structure.

After due consideration of the arguments of a paid attorney and of citizens of the township, which were all duly weighed and considered, the former condemnation of this schoolhouse was unanimously reaffirmed.

REPORT OF SANITARY SURVEY OF SCHOOLHOUSE AT KENT,
REPUBLICAN TOWNSHIP, JEFFERSON COUNTY.

Made April 17, 1906:

In accordance with request of County Superintendent and several patrons of the school, I made an inspection of the schoolhouse at Kent, Jefferson County, Indiana.

Site.—The site is not a good one. It is not high and dry and yet can not be said to be wet. The schoolyard is too small and it is impossible to add more ground on account of the residence district adjoining.

Building.—The building is an old dilapidated two-story frame structure, stone foundation. The plastering has fallen off in many places and cracks are frequent. There is no basement. Both rooms are heated by stoves and there are no ventilating shafts. The windows are broken and in a ramshackle condition. On standing in the center of the room and jumping up and down the walls of the building would shake. One floor has been placed on top of another until now there are three floors in the room. The rooms are lighted by three windows on each side. The light admitted is not sufficient. Both rooms are overcrowded and complaints are frequent. The report of the teacher shows that colds, coughs, and rheumatism are frequent. There have been no reports of diphtheria or other infectious diseases. The per cent. of attendance during last term was 90.

Opinion and Recommendations.—My opinion is that this schoolhouse is unsanitary and unsafe for school purposes and I therefore recommend its absolute condemnation, and the condemnation of the present site.

After due consideration of the above survey the following order of condemnation was unanimously adopted:

PROCLAMATION OF CONDEMNATION OF THE SCHOOLHOUSE AT
KENT, REPUBLICAN TOWNSHIP, JEFFERSON COUNTY.

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Kent, Republican Township, Jefferson County, Indiana, is unsanitary and unfit for school purposes; therefore it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for said purposes from and after this date, May 18, 1906, and in the event of the trustee or any school teacher or other person using said schoolhouse for school purposes, then the Secretary of the Indiana State Board of Health shall inform the Attorney-General, who will bring prosecution as in the statutes provided.

Passed by the Indiana State Board of Health in special session,
May 18, 1906.

SANITARY SURVEYS OF SCHOOLHOUSES AT MADISON.

By J. N. Hurty.

UPPER SEMINARY.

Made April 18, 1906.

Site.—The site is a good one, but area is not quite sufficient.

Building.—The building is very old, having been built over sixty-five years ago. The front part of originally four rooms has been added to from time to time until now there are eight rooms, and their arrangement is such as to be a threat against life in case of fire or special alarm. The building is two stories, walls cracked and unsafe, no basement, worn floors, dangerous stairways, warmed by stoves, no ventilating shafts, not sufficiently or properly lighted. The facilities for the care of wraps are poor and unsanitary, and repulsive odors from the privies enter some of the rooms when windows are open. It is entirely unnecessary to make a detailed description of each room, for the whole building and every room is very unsanitary.

Recommendations.—I recommend that the schoolhouse be condemned for school purposes.

After due consideration of the above account of the Upper Seminary Schoolhouse at Madison the following order of condemnation was unanimously adopted:

PROCLAMATION OF CONDEMNATION OF A SCHOOLHOUSE AT
MADISON, JEFFERSON COUNTY, KNOWN AS
THE UPPER SEMINARY.

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Madison, Indiana, known as the Upper Seminary, is unsanitary and unfit for school purposes; therefore it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for said purposes from and after July 1, 1906, and in the event of any school officer, school superintendent, teacher or other person using said schoolhouse for school purposes, then the Secretary of the Indiana State Board of Health shall inform the Attorney-General, who will bring prosecution as in the statutes provided.

Passed by the Indiana State Board of Health in special session, May 18, 1906.

SANITARY SURVEY OF FULTON SCHOOLHOUSE AT MADISON.

Site.—The site is high, dry, naturally well drained, and good in all ways.

Building.—Brick, built in 1875. One story, two rooms. Insufficiently and improperly lighted, heated by stoves, no ventilating shafts. Entrance is through an unwarmed vestibule where wraps are kept.

Recommendations.—This is an old, damp and unsanitary building, and I recommend that it be condemned.

After consideration of the above sanitary survey the following order of condemnation was unanimously passed:

PROCLAMATION OF CONDEMNATION OF A SCHOOLHOUSE AT
MADISON, KNOWN AS THE FULTON SCHOOLHOUSE.

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Madison, Indiana, known as the Fulton schoolhouse, is unsanitary and unfit for school purposes; therefore it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for said purposes after December 1, 1906, and in the event of any school officer, school superintendent, teacher or other person using said schoolhouse for school purposes, then the Secretary of the Indiana State Board of Health shall inform the Attorney-General, who will bring prosecution as in the statutes provided.

Passed by the Indiana State Board of Health in special session, May 18, 1906.

SANITARY SURVEY OF WALNUT STREET SCHOOLHOUSE AT
MADISON.

Site.—The site is low and is liable to flood from Crooked Creek, near by. On one occasion the water was seven feet deep in the lower school-room and the washings from the privy floated around the schoolyard.

Building.—The building is stone, built in 1864. Two stories, two rooms. Insufficiently and improperly lighted by cross-lights. Building is damp at all times. Stairway to upper room narrow and of the kind known as box stairway, which is a great danger in case of fire or panic.

Recommendations.—I recommend that this school building be condemned for all school purposes.

After due consideration of the above survey the following order of condemnation was unanimously adopted:

PROCLAMATION OF CONDEMNATION OF A SCHOOLHOUSE AT
MADISON, KNOWN AS THE WALNUT STREET SCHOOLHOUSE.

Whereas, It has been shown to the satisfaction of the Indiana State Board of Health that the schoolhouse at Madison, Indiana, known as the Walnut Street Schoolhouse, is unsanitary and unfit for school purposes; therefore it is

Ordered, That said schoolhouse is condemned for school purposes and shall not be used for said purposes after December 1, 1906, and in the event of any school officer, superintendent, teacher or other person using said schoolhouse for school purposes, then the Secretary of the Indiana State Board of Health shall inform the Attorney-General, who will bring prosecution as in the statutes provided.

Passed by the Indiana State Board of Health in special session, May 18, 1906.

HEALTH OFFICERS' SCHOOL.

Dear Doctor.—The Annual Health Officers' School will be held in Indianapolis Thursday, June 28-29. The headquarters will be at the new Claypool Hotel, and all sessions will be in the auditorium on the eighth floor.

A formal summons will be sent to you about ten days before the meeting. Preserve the summons, and also secure certificate of attendance when you come, from the clerk at the auditorium door. The two documents will give you a legal claim against your Board for your expenses. An interesting and instructive program will be prepared.

Any suggestions in regard to subjects to be considered and for the conduct of the conference will be thankfully received.

This conference is for all officers—county, city and town. Remember the date, June 28-29.

Very truly yours,

J. N. HURTY,
Secretary.

By order of the State Board of Health.

REPORT OF THE INDIANA STATE BOARD OF HEALTH TO THE
CONFERENCE OF STATE AND PROVINCIAL BOARDS OF
HEALTH OF NORTH AMERICA WITH THE PUBLIC
HEALTH AND MARINE HOSPITAL SERVICE,
HELD MAY 23, 1906, WASHINGTON, D. C.

As the Legislature of the State of Indiana has not been in session since the last report of this Board, there are no new Health Laws and no changes to record.

The campaign against tuberculosis by the State Board has been actively carried on. Lectures upon this subject and the general subject of the preservation of the public health have been supplied to thirty-two teachers' institutes and farmers' institutes during the winter. Over 25,000 health circulars have been distributed. During the week beginning March 5 a tuberculosis exhibition was given in Indianapolis under the auspices of the Indianapolis Commercial Club and the Indiana State Board of Health. This exhibition was secured from the National Association for the Study and Prevention of Tuberculosis. It was held in Tomlinson Hall at Indianapolis. Lectures upon different phases of tuberculosis were given every night and every afternoon. The Governor and Lieutenant Governor of the State took active part in the work. Five thousand and one hundred and twenty-eight people visited the exhibition, and each visitor was supplied with a pamphlet treating of the prevention of tuberculosis.

During the past year the State Board has condemned twenty-eight schoolhouses as unsanitary and unfit for school purposes, and twenty-five new school houses have been constructed and three remodeled. The Indiana law gives full power to the State Board of Health in this matter. The Legislature of 1903 gave to the State Board two laboratories, which together constitute a State Laboratory of Hygiene. The laboratory con-

sists of two divisions—chemical and pathological. Each division has a skilled superintendent, with assistants. The work of the chemical division to date has been concerned mostly with making food and drug analyses, for the enforcement of the pure food and drug law. It has, however, made over 500 sanitary water analyses and has commenced the sanitary survey of White River. The bacteriological division is doing such work for the medical profession and the people generally as pertains to hygienic bacteriology and pathology. The Hygienic Laboratory has not yet finished its first year's work, but it is growing constantly, and numerous acknowledgments from citizens are received concerning its usefulness.

It is now seven years since the State Board, under a special law, has been collecting accurate mortality statistics. The statistics of births and cases of infectious diseases have not been heretofore a credit to the State, as the statutes did not permit of their accurate collection. An improvement, which is expected will be striven for by the Board, will be a law to be presented to the Legislature of 1907 which will make it possible to collect accurate birth and infectious disease records.

The Board takes pride in calling attention to the decreased death rate in 1905 as compared with the preceding five years. This decrease is 0.3. The figures show for 1905 a death rate of 14 per 1,000, and the average for the five preceding years was 14.3. This means a saving of over 700 lives. There also appears a decrease in the death rate by the same comparison in tuberculosis, typhoid fever, diphtheria, scarlet fever and pneumonia. There is a slight increase in cancer and in deaths from violence. Smallpox has been epidemic in many parts of the State, but has been mild, with very few mortalities. The total deaths from this disease for the year 1905 numbered 35. It is thought fair to conclude that at least some part of the reduction in the deaths from infectious diseases has been due to the activity of the State Health Department.

Approved and ordered forwarded as the report of the Board for the year ending May 1, 1906, to the Surgeon-General of the United States Public Health and Marine Hospital Service.

SPECIAL MEETING.

June 28, 1906.

Called to order at 12 m.

Present: Drs. Davis, McCoy, Wishard, Tucker and Hurty.

Dr. Davis stated the object of the special meeting was to consider the matter of causing the Health Officers of the State to inspect and report upon the condition of the slaughter-houses in their respective localities.

The object was thoroughly discussed, and the following order was adopted:

ORDER CONCERNING THE INSPECTION OF SLAUGHTER AND PACKING HOUSES.

The State Board of Health herewith directs that county, city and town health officers shall inspect all slaughter and packing houses within their respective jurisdictions and report their findings to the State Board. The facts of the said inspections shall be recorded upon the printed forms supplied by the Board, and all reports must be made and returned within ten days after receipt of this order and the said inspection forms. The Secretary is directed to prepare forms for the purpose set forth above and submit them to the President for his approval. When duly approved by the President the Secretary shall send said forms to all county, city and town Health Officers with a letter of instructions. The Secretary is also instructed to gather in all the reports possible, and tabulate and analyze them and report the matter at a further meeting of the Board.

The annual Health Officers' School opened the morning of the 28th, and the first session had adjourned at the hour of the meeting of the Board. Various features of the school were discussed, but no orders or resolutions were passed.

Adjourned to meet June 29, at 12 m.

ADJOURNED MEETING FROM JUNE 28.

June 29, 1906.

Called to order at 12 m.

Present: Drs. Davis, McCoy, Tucker and Hurty.

The Annual Health Officers' School adjourned at 12 m., and the meeting was to consider the work done and to allow all necessary bills. It was the general opinion that the most fruitful discussion related to the inspection of meat and of slaughter-houses, which discussion was led by Dr. A. W. Bitting, State Veterinarian. It was

Ordered, That the Secretary should prepare a full report of the school and publish the same in the Monthly Bulletin.

THIRD QUARTER.

REGULAR MEETING OF THE STATE BOARD OF HEALTH.

July 13, 1906.

AFFAIRS CONSIDERED OF THE SECOND CALENDAR QUARTER
OF 1906, AND THE THIRD FISCAL QUARTER OF 1905-1906.

Called to order by President Davis at 2 p. m.

Present: Drs. Davis, McCoy, Wishard, Tucker, Hurty.

Minutes of last regular and the special meetings of May 18
and June 28 read and approved.

Report of the Secretary for the last quarter called for and
read, as follows:

QUARTERLY REPORT OF THE SECRETARY.

The health of the State, as shown by reports to this Board,
was generally better during the quarter ending June 30 than in
the corresponding month last year. Smallpox still prevails to a
slight degree, generally in mild form. There were no smallpox
deaths during the quarter, the summary being as follows:

Cases decreased 31 per cent., deaths decreased 100 per cent.,
area invaded decreased 21 per cent.

The table presented herewith shows the data of the disease dur-
ing the quarter. No marked epidemics are to be recorded. The
work in the Laboratory of Hygiene has been going on as usual,
and it is a pleasure to report that these departments are meeting
with increased favor from the people and physicians of the State.
The reports of the Bacteriologist and of the Chemist have been
published each month in the Bulletin, and are here summarized
for the quarter. Mortality statistics have been collected, tabulated
and analyzed as usual; and the statistics pertaining to births,
contagious diseases and marriages will be collected as soon as pos-
sible.

SMALLPOX FOR QUARTER ENDING JUNE 30, 1906.

	No. of Cases Reported.	Deaths.	No. of Counties Invaded.
April, 1905.....	151	4	18
April, 1906.....	97	0	11
May, 1905.....	125	2	11
May, 1906.....	112	0	14
June, 1905.....	114	4	13
June, 1906.....	58	0	8

Notices of the condemnation of the schoolhouses at Madison and Kent, Jefferson County; and of West Newton and Valley Mills, Marion County; of Rockcreek Township and Polk Township, Huntington County, were formally made out and sent to the officers having jurisdiction on May 26, 1906. Instructions to said officers being duly given.

VISITS AND INSPECTIONS.

May 22, Monroeville.—On account of inspection of schoolhouse and to confer with town authorities in regard to general sanitary matters. The report of this survey was presented at the special meeting held June 28, and action taken.

May 28, Zionsville.—On this date, in accordance with a request from the school trustees of Zionsville, I visited the place and made a sanitary survey of the schoolhouse. I was met by the three trustees and three or four other citizens, and the schoolhouse was thoroughly inspected. I deem it unnecessary to here give all the facts secured by the inspection, because the trustees immediately agreed that all changes and improvements recommended should be made before opening the school in the fall.

May 28, Shelbyville.—I visited this city upon request of the City Board of Health, who wished to have a consultation in regard to the sanitary affairs of their city. Upon arrival I was met by the members of the Board and, together with the Mayor, we held a consultation. The authorities named desired to draw up and have passed, if possible, a local ordinance controlling the meat supply and in regard to the removal of nuisances affecting the public health. The subject was discussed for fully two hours, and then we rode over the city inspecting various unsanitary conditions. I think my visit was productive of good, for ordinances governing the subjects named above have since been passed, and

are being enforced. The Mayor of Shelbyville and the Board of Health passed a resolution of thanks for the visit and help rendered.

May 30, Michigan City.—I visited Michigan City in accordance with an invitation from the Lake County Medical Society in order to read a paper on the subject of "The Early Diagnosis of Tuberculosis," and to deliver an illustrated lecture to the public upon "Tuberculosis; Its Prevention and Cure." I was cordially received by the representatives of the association named and by the city and county health officers. I think not a little good was accomplished for the public health cause.

June 22, Richmond.—On this date I visited Richmond in order to deliver a lecture at a called meeting of citizens upon the "Prevention of Tuberculosis." A good audience gathered in the High School auditorium, and afterward the Wayne County Anti-Tuberculosis Society was organized with 96 charter members. Mr. Jesse Reeves was elected president.

The Annual Health Officers' School was held June 28 and 29. The Claypool Hotel, Indianapolis, was made headquarters, and, with the exception of two sessions, the meetings were held in the auditorium of the hotel. The following program was carried out and, in addition, a special lecture was given by the Secretary concerning "Recent Improvements in Antitoxin."

PROGRAM.

First Session, June 28.

10:00 a. m.—Called to order by T. Henry Davis, of Richmond, President of the State Board of Health.

Welcome.....Governor J. Frank Hanly
 Needed Medical and Health Legislation.....Glen Kimball, Marion
 The Weak Places in the State's Sanitary Service, and How They May
 Be Strengthened.....J. N. Taylor, Crawfordsville
 Discussion.

Second Session, 2 p. m.

The Prophylaxis of Syphilis.....A. W. Brayton, Indianapolis
 Discussion.
 Eyes, and How to Care for Them.....J. McLean Moulder, Kokomo
 Discussion.
 Slaughter-House and Meat Inspection.....A. W. Bitting, Lafayette
 Discussion.
 Question Box.

Third Session, 8 p. m.

Tuberculosis Symposium.

- The Health Officers' Opportunity in the Combat Against Consumption.....Geo. T. McCoy, Columbus
 Treatment of Joint Tuberculosis at Sea Breeze..F. A. Tucker, Noblesville
 Home and Foreign Sanatoria (Lantern Illustrations).....
J. N. Hurty, Indianapolis
 Discussion.

Fourth Session, June 29, 9 a. m.

Question Box.

- How to Manage the Milk Supply.....H. E. Barnard, Indianapolis
 Discussion.
 Widal and Diazo Tests for Typhoid Fever..T. Victor Keene, Indianapolis
 Discussion.

The attendance was 241. All city, county and town health officers were summoned. The interest and discussions were excellent. Several letters received since the meeting from various gentlemen who attended confirm the belief that the conference resulted in much good for the public health cause.

SANITARY SURVEY OF SCHOOLHOUSE AT SPICELAND, HENRY COUNTY, JUNE 29, 1906.

This building belongs to a society known as "The Spiceland Academy."

Site.—The site is satisfactory in every way. Indeed, it is a beautiful park and has excellent natural drainage.

Building.—It is an old frame building and has been painted within the last two years. It has two stories, four schoolrooms, two halls, three cloakrooms. The stairs are of easy ascent, floors throughout the building are bad; foundation is stone; no basement. There is a dugout, or hole, beneath the building in which are placed two ordinary wood stoves with galvanized iron jackets. From these jackets tin pipes conduct heat to the various rooms above. This is a makeshift furnace, receiving all its air from the dugout or hole. It is therefore true that the rooms above receive ground air and frequently damp air which has been warmed by passing over the surfaces of the stoves. This heating arrangement is unsanitary, inadequate and dangerous. In addition to this makeshift furnace stoves are placed in each room.

The building is too much shaded. Large, beautiful shade trees spread their foliage on every side, obstructing sunshine, light and air.

Primary Room.—This room is 33x33x13 feet, 52 seats, enrollment 50; lighted by eight windows; ventilation by windows alone; no ventilating ducts. There is ample space in this room for the children enrolled and the light is ample, but the teacher is compelled to look into the light. Slate blackboards.

Room No. 2.—This room is 33x33x13 feet, contains 39 seats, enrollment 36. It is lighted by eight windows, blackboard is painted on the

walls and shiny and chipped in places. Part of the blackboard is wood; the ceiling is broken and has fallen off in several places. This room is heated by a coal stove in conjunction with the makeshift furnace above described.

Room No. 3.—This room is 24x45x13; contains 50 seats; enrollment not given. It is lighted by eight windows; teacher is compelled to look into the light; blackboards are painted on the plaster walls and shiny and chipped. The room is heated by a coal stove in conjunction with the makeshift furnace above described.

Room No. 5.—This room is 33x24x14 feet, and contains 42 seats; enrollment is 46. There is ample space and light for the pupils, but the teacher is compelled to look into the light. The slate blackboards are satisfactory. The room is heated by a wood stove in conjunction with the makeshift furnace above described.

Outhouses.—There are two outhouses for the sexes, but both are old, dilapidated frame affairs in an awful condition.

Opinion and Recommendations.—In addition to what has been told above, the testimony is to the effect that in cold weather school is frequently dismissed from this building or the children hover around the stove to keep warm. Inquiry developed the fact that coughs, colds, catarrh and rheumatism prevail every winter among the students. All of this is to be expected from the survey above given. It is my opinion the schoolhouse is unsanitary in every way and it is certainly true that many children have been injured in their health in the past while attending school in it. Indeed, I have no doubt that many children have not only suffered from sickness, but also have died in after life from injuries received to their health in this damp, poorly lighted, poorly heated and insufficiently ventilated old schoolhouse.

I recommend that the above schoolhouse at Spiceland, Indiana, be condemned for school purposes, the condemnation to go into effect June 1, 1907, and that the Spiceland school authorities be ordered to make certain sanitary improvements for this winter. The following proclamation of condemnation is recommended:

**PROCLAMATION OF CONDEMNATION BY THE INDIANA STATE
BOARD OF HEALTH, FOR PUBLIC SCHOOL PURPOSES, OF
THE FRAME SCHOOLHOUSE AT SPICELAND, HENRY
COUNTY, KNOWN AS THE SPICELAND ACADEMY.**

Whereas, It appears to the satisfaction of the Indiana State Board of Health in regular session July 13, 1906, that the frame schoolhouse belonging to the Spiceland Academy, situated in the town of Spiceland, Henry County, Indiana, and used for public school purposes in said town of Spiceland, is unsanitary, causing sickness among the pupils, and is unfit for school uses; therefore it is

Ordered, That said schoolhouse is condemned and it shall not be used for school purposes the coming school term of 1906 and 1907 unless the following improvements are made, to-wit:

First. All windows shall be made easily movable for ventilation purposes and shall be provided with dark-colored shades, so light may be properly tempered.

Second. All stoves shall be provided with galvanized iron jackets and the unsanitary and dangerous jacketed stove arrangement in the hole beneath the building shall be abolished. It is recommended that a basement of proper size, with walls and cemented floor be made, supplied with efficient furnaces, taking air from the outside.

Third. Decent outhouses shall be supplied for the sexes and shall be kept clean and decent, with good walks leading to them. And it is further

Ordered, That, as the said schoolhouse at Spiceland, Henry County, Indiana, can not be made truly sanitary by repairs, and as the improvements ordered are merely temporary makeshifts intended to obviate the necessity of closing the school at Spiceland, Henry County, Indiana, the coming winter, therefore the said frame schoolhouse, belonging to the Spiceland Academy, at Spiceland, Henry County, Indiana, is finally and absolutely condemned for public school purposes and shall not be used for such purposes after July 1, 1907; and any board of school trustees, or any township trustee, or any school teacher, or any other person who shall violate this proclamation of condemnation and shall hold school in the said schoolhouse after July 1, 1907, shall be prosecuted in the courts of the State by the Attorney-General as in the statutes provided.

Passed July 13, 1906.

After discussion the above proclamation was unanimously passed as an order of the Board.

REPORT OF INSPECTION OF THE SCHOOLHOUSE AT EMINENCE.

By T. Victor Keene.

May 31, 1906.

Approaches.—The only approach to the school building is a gravel road. There are pieces of an old wooden sidewalk remaining, but the gravel road is the approach commonly used. This is a good roadway, but in rainy weather it is certain to be muddy. The schoolhouse is located ten feet off this road. Leading from the road to the entrance of the building is a wooden walk about six feet wide and in fairly good repair.

Grounds.—The ground is located on a high point, with excellent drainage. The entire area of the ground is about one acre. The building is located on the roadside of the ground at about its center, thus dividing the ground into two play lots—one for the boys and one for the girls. It is fairly well sodded and well drained. On the grounds are two closets of the type ordinarily seen in country schoolhouses, but both are in a very dilapidated and dirty condition. One closet is 75 feet from the driven well, from which the water supply for the school is taken, but the drainage from the closet is away from it instead of towards it.

Description of School Building.—The schoolhouse is a two-story brick building, with brick foundation and no basement. The building occupies an area of about 50x25 feet, with a small hall in front, about 12x10 feet. The building is in a very dilapidated condition; the walls bulging, and in some places to such an extent that it can be readily seen with the

naked eye. Efforts have evidently been made from time to time to strengthen the weakened walls, for there are numerous bolts and braces present. The interior consists of four rooms, about 25x25 feet. The rooms are all of the same dimension and general height. Each room has five windows, 2½x6 feet. The windows were in good condition, every window in the building being easily raised and lowered, and the glass plates were all intact. Each room was heated by a stove, which was not surrounded by protective screen. I was told that in the winter time those children sitting near the stove suffered because of the heat, while those far removed from the stove were always complaining of lack of heat.

The blackboards in all the rooms were made by painting the plastering with a heavy black enamel paint and were glossy and very hard on the eyes. In many places they were cracked and chipped. The ceilings were all of painted wood and were 15 feet high. The plastering on the side walls was loose and in many places had fallen off. The floors were all shaky and unsafe. In one room, owing to the bulging of the brick wall, the joists had slipped out of the sockets in the brick wall and the floor in that part of the room sagged three inches. In places the bricks in the wall were so loose that they could be picked out with the hand.

The primary room was much too small. This room was about 25x25 and accommodated 67 pupils. The seats were old fashioned straight-back ones, and owing to the bad condition of the floor many of the seats were not level; in some instances one of the seats would be two inches lower than the other, although the desk in front would be perfectly level. The desks were old and were of different sizes and models. This primary room was always overcrowded, according to the statement of the teacher. Leading from one side of this primary room was a cloakroom, 18x6. The cloakroom did not have enough hooks to accommodate the number of pupils in the school. It was necessary for a child before entering the cloakroom to pass into the schoolroom, as the only entrance was by way of the schoolroom. This is a very bad condition.

Although the roof had apparently been shingled very recently and was in good repair, the statement was made to me that every time it rained or stormed water leaked into the room, and I know this to be a fact, because it was raining at the time the writer was inspecting the school, and in one portion of the rickety floor was a puddle of water, and water could be seen dripping down the wall. The blackboards in this room were in bad condition, being glazed. The seating capacity of this room was much less than its floor area would seem to indicate, owing to the fact that the heating was by a stove, which caused a loss of considerable floor space. The other room on the ground floor was of much the same type as the one just described—had the same glazed blackboards, the same number of windows and window arrangement, the same heating plan, the same variety of desks, the same cloakroom arrangement, except that the area of this cloakroom was about 12x6 and contained a small round window about 18 inches in diameter. Only 30 pupils are in this room, it being used for pupils from eight to fifteen years of age. This room was in a worse condition than the one previously described, for the reason that the floor was less solid and the brick wall less safe.

It would have been a very simple matter to have picked out part of the wall with the hands, the bricks were so loose.

Halls.—From the downstairs hall a set of winding steps about six feet wide lead to the second story. This stairway was solid, but in case of fire, if there would be any resulting panic, it is hard to see how it would be possible to avoid injury to pupils on this stairway. It is, however, well lighted.

On the second floor there are two rooms of the same size as the ones just described.

Water Supply.—The teacher of the school informed me that all the drinking water used was obtained from a driven well, which is said to be 101 feet deep. There were no water buckets or cups at all in the school, the children going to the well and drinking freshly drawn water. There were two cups on chains attached to the pump.

Surroundings.—There are no houses nearer than 250 feet.

Managing Board.—Mr. J. C. Blunk, of Littlepoint, is trustee, and Mr. H. A. Blunk and H. K. Lee, of Hall, R. R. No. 2, are the members of the Board of Education.

Local Feeling.—There seemed to be considerable local feeling against the use of the building. Several citizens told me that whenever a storm came up they immediately went to the schoolhouse and removed their children; that in several instances the teacher had taken it upon himself to dismiss the school because of a storm. Mr. H. A. Blunk, a member of the Board, stated that it was his desire to repair the building to such an extent as to make it safe, which he admitted was not the case at the present time, and to then, later, if possible, secure the abandonment of several small district schools by uniting them into one large school, and then erecting a modern building at an expense of from \$16,000 to \$20,000. Mr. J. C. Blunk, Trustee, would not express an opinion regarding the situation. He admitted that the building was unsafe, but seemed to think the building could be repaired and made so. He stated that he personally did not think it advisable to repair the building for at least a year, for it could probably be done cheaper later than at the present time. However, he expressed himself as perfectly willing to do anything that seemed desirable. Mr. H. K. Lee did not express any opinion.

This schoolhouse is the property of the township, and the township will be the body that will have to build a new building or repair the old one. The township at this time is nearly out of debt, according to the statement of the Trustee, and is in a position financially to do anything which may be indicated.

I recommend that this building be condemned, as in my judgment it is impractical to attempt to repair it.

After discussion this school building at Eminence was condemned.

REPORT OF INVESTIGATION OF TYPHOID FEVER EPIDEMIC
AT GREENCASTLE.

By Dr. Helene Knabe.

The undersigned was sent to Greencastle, Indiana, April 10, to investigate an epidemic of typhoid fever which has appeared there.

Upon my arrival I conferred immediately with Dr. W. M. McGaughey and Dr. Hutcheson, the local and county Health Officers. Fifteen cases had been reported, one of whom had died April 7. The majority of the cases were children, some in school, others below six years. Only a few adults were sick at the time.

There were a few cases known to have a little fever during the preceding weeks, but none of them had been diagnosed typhoid fever. The physicians in whose practice the cases occurred gave me their addresses and I obtained specimens of blood from all of them. I was also fortunate in meeting four persons who had not been under a physician's care at all, but in every case enough of a history could be obtained to suspect typhoid fever, and here also I took blood for Widal tests. Other cases had been diagnosed lagrippe, nervousness, remittent fever, etc.

Of the twenty-two specimens of blood to which I applied the Widal test every one showed a pronounced reaction, thus clearly demonstrating that the infection is now widespread in Greencastle.

The universal belief among the citizens of Greencastle was that the infection had come through milk obtained from the Forrest Hill Dairy, owned by Mr. J. W. Lemmink. Two sons of this family were sick for a short time in March, though not diagnosed typhoid fever, and as most of the patients had been taking milk from this dairy they suspected it first of all. Careful consideration of the circumstances, however, seems to show that a cause other than milk was at work here, for some of the families in which typhoid fever has appeared use no milk; others do not get it from the Forrest Hill Dairy.

An investigation of the sanitary conditions in Greencastle reveals defects enough to account for the spread of typhoid fever, or any other infectious disease. The town has about 5,000 inhabitants and its location is near the river. Part of the streets are macadam and reasonably dry; others are not improved and in very bad condition.

Greencastle has no sewer and many dwellings are provided with surface privies, which do not often require cleaning, since after a rain the soft earth absorbs nearly all of their contents; at the same time water appears in many a cellar in town. Not infrequently I found people who stated that their cellars were damp during the greater part of the year.

The cleaning of streets is not given sufficient attention. Many of the alleys are in a very bad condition, for instance, the alley on Vine street, behind W. L. Deuman's property, is a regular dumping ground. Center street, bordering the campus of De Pauw University, is strewn with all kinds of filth. On Water street, very near to the point where it crosses Washington street, I saw a large accumulation of waste from a grocery store, decaying vegetables, etc. Besides these places mentioned there are many others equally as bad.

Very unsanitary is a contrivance which I now wish to describe. A

part of the hotels and residences are supplied with cesspools, from which a line of tiling is laid, eventually draining at some point in an open gutter on the streets. These drains in warm weather give rise to a condition that is no credit to any town. The day of my visit to these places was cool and damp, and the heavy rain had washed away most of the contents of these cesspools, still there hovered the strong odor of urine about the outlets of the drains. Residents of the place declared it was not at all uncommon during the summer, after a rain sufficient to overflow the cesspools, to find their contents lying in the gutter, covered with flies and emitting a most unpleasant odor.

One place standing in sore need of betterment is in the rear of Florence Hall, which is used for a boarding house for De Pauw students. The untidy back porch, with its dirty uncovered barrel, half filled with waste from the kitchen; the outhouse a short distance away, which drains its foul contents into a shallow ravine after a rainfall, where a tiny stream of water washes away some of the filth, to distribute it where the ravine extends in the immediate vicinity of dwellings; these are conditions which, if not changed very soon, will surely give trouble in the coming warm season. There are also several cesspools in this location. One of them is leaky, the seepage appearing on the slope at the side of the ravine; the other two were filled to the brim, when I saw the place, one of them having run over the week before on account of heavy rains.

An old well is also to be found in this vicinity. The brick with which it is built over is crumbling away, and as it is on the level with the grass, with no railing there to hinder any one from walking right into it, there is reason to suppose that some one may come to his death by drowning. The well should at least be fenced in.

Water Supplies.—Greencastle receives a large part of its water from water works. The filters are laid in the bed of ——— Creek. A large open well receives the filtered water. From here it is pumped into a standpipe over thirty feet high, and thence passes into the general pipe system. The water has been of good quality until a year ago, when it began to be muddy after heavy rains. Nothing was done, however, to get at the root of the trouble. Since the present epidemic of typhoid fever appeared the Health Officer sent some of the water to the State Laboratory and the examination showed the water to be badly polluted.

When I visited the water works I noticed that there was an intake from the creek. I suggested that there might be the source of the trouble. The engineer stated that it was sealed, however, but when the water in the creek was high he could see the muddy water come in from the filter, an evidence that the filter was damaged.

At the present time I am certain of 37 cases, four of which may be accounted for by direct contact, because they developed subsequently to nursing a patient in their house. In eleven instances two cases occurred in the same family, but seven of them came so near together that I could not positively determine whether or not one of the patients had been infected from the other. I am inclined to believe the infection in the majority of these cases occurred at the same time. In one family three cases occurred at the same time. Two of the little patients are in school; the oldest sister, age sixteen, at home. These three cases were diagnosed

as remittent fever. I did not have a chance to get blood from the younger children, and they are not included in the above number. If the statement of the attending physician—"all three had the same trouble"—is to be taken as correct, the number of cases rises to thirty-nine, for the blood of the older sister gave a positive Widal reaction. Three other cases of whom I was unable to get any blood on account of temporary absence were children, two of whom had been with their mother in Muncie four or five weeks ago and when there a short time became sick. The diagnosis was "indigestion." Now the mother is in bed with fever and her blood shows positive Widal reaction. (Mrs. Maxwell.) The third case is Mrs. Detro's little boy. She stated that he had been sickly and is now very anemic. Mrs. Detro has been under a physician's care for "nervousness." Her blood shows also a typhoid reaction.

Of thirty-nine cases (omitting the three last mentioned) twenty-four have the city water as their house supply and seven drink it every day in school. Four cases, including the deceased, had their places of employment down town, and probably used the city water there. In six of the houses where typhoid fever is now present the water supply is from a dug well; in three cases cistern water is used.

The first case which appeared this winter was that of a teamster, Mr. Gladwell, and he stated that he had been drinking almost anywhere around the country, from little ditches, etc., so that there is a probability of his having been infected outside of the city. The other case, Irving Brown, age seven, at watercress which he and several boy friends were picking at a branch outside of the city. This branch of water is known to receive sewage, and the child fell ill on the fourteenth day after eating the cress.

Taking it altogether, the water and general unsanitary conditions seem to me the most potent factors causing this epidemic.

Summary—

Number of cases reported.....	15
Cases diagnosed by Widal reaction.....	22

INSPECTION OF DAIRIES AT GREENCASTLE.

In connection with the investigation of the epidemic of typhoid fever at Greencastle I inspected the following dairies:

De Pauw farm dairy, owned by Mr. Harry Nugent and Dr. Bence. This dairy does not supply many customers; ten milk cows are kept. The stable is not very well arranged, providing also shelter for the horses. The floor on which the cows stand is covered with boards; walls and ceilings are not as clean as they ought to be. The stable also held many chickens. The water is used for washing the cans and is taken from a spring. This spring is covered by a small stone house. Bottles and milk cans are kept outside.

Dairy of Mr. Sidener: Thirty-five cows. The barn floor is partly wood and partly clay, which was very soft on the day of my visit. I happened to get there during milking time. Neither the man who did the milking nor the cows did look very clean. The milk can was kept in the stable during milking time. Harness and other utensils were hanging in the same barn. One cow was sick, probably hurt, having horned itself a week before with other cows.

Dairy belonging to Mr. Paul Tucker: Twenty-five cows. Barnyard very dirty. The dung from the stables had not been hauled away for several weeks and was heaped up around the barn so that it was troublesome to get inside without wading through it. The cows did not look very clean, neither did the inside of the stable. The milk is taken into the house, down a small, dingy stairway into a kitchen in the basement. There it is strained and filled into cans or bottles. This kitchen was clean when I saw the place. The trough around the cistern pump contained chloride of lime. Filtered cistern water is used for cleaning and scalding cans, etc.

Forest Hill dairy, owned by J. W. Lemmink: On account of the suspicion which people had regarding the spread of typhoid fever from this place I made a thorough examination of the whole place. The dairy is several miles away from town, in the open country, with buildings situated on a little hill. A large barn accommodates the cows. About one-quarter is utilized for the horses, but they are far removed from the cows, and between them is a high board wall. The floor is made of clay and is dry and hard. A wooden gutter behind the cows is kept very clean, and everything is in good condition. I saw this dairy at milking time, and dare say it was done in the cleanest way in which I have yet observed. The air in the stable, both doors of which were open, was very good, and the cows were very clean. Mrs. Lemmink, who did the milking, used a two-quart cup to receive the milk. When half filled this was emptied into a bucket which stood covered in the barn door. The straining was done on the side porch, where a table, bottle rack, etc., were provided for this purpose. Cans, strainer, etc., as well as the table and small tubs in which the bottles were scalded, were scrupulously clean. Some of the bottles were kept in the bottle rack, mouth downward, others in boxes provided with oilcloth cover, and all very clean.

The milk is rich and of good quality, as shown by the examination made in the Laboratory of Hygiene, which showed 5 per cent. fat. The house in which Mr. Lemmink and his family live is old, but the rooms are kept clean and tidy. A privy vault at the side of the house opposite from the porch where the milk is handled is not in good condition, and Mr. Lemmink stated that he was preparing to remove it and make a new one further away. Its drainage does not come near the house, nor could it go into the spring from which the water is used. This spring is quite a distance from the house and also from the barn, but some seepage from the barnyard is evidently getting into it, as shown by analysis of the water which was made a short time ago in the Laboratory of Hygiene. When I saw the place the barnyard was clean and dry. Mr. Lemmink stated that the cows were kept in the barn only at milking time, except in very cold winter. One case of typhoid fever occurred in this house

two years ago; other cases have been found in town more or less at all times. There were also several cases in town before the two children, Charles and Lawrence, were sick this winter. Both children had no symptoms to make any one suspect typhoid fever, and as Dr. Hutcheson, who is the family physician, verified the statements made by Mr. and Mrs. Lemmink in every particular I have no doubt that they were true. Dr. Hutcheson's books showed that he was called only once, because the children were sick with acute symptoms, having had a very hearty meal the day before, and twice after that time some members of the family came to the doctor's office for medicine.

There is, of course, no doubt that both of the children had a mild case of typhoid fever, because their blood gave a positive reaction to the Widal test.

The foregoing investigations I have carried out to the best of my ability, taking great care not to be biased by any opinion advanced by persons with whom I came in contact.

HELENE KNABE, M. D.

Renewal of Permits.—After consideration of applications, the renewal of permits to the J. T. Polk Co., Greenwood, and to the plants of the American Tin Plate Company at Elwood, Anderson, Muncie and Gas City, were ordered, and the Secretary was directed to notify the parties concerned.

It was ordered that H. E. Barnard should represent the Board at the National Association of State Dairy and Food Departments, to be held at Hartford, Conn., July 17, 18, 19, 20, 1906, his expenses to be allowed.

FOURTH QUARTER.

REGULAR MEETING OF THE STATE BOARD OF HEALTH.

October 12, 1906.

THE AFFAIRS OF THE FOURTH FISCAL QUARTER AND OF THE THIRD STATISTICAL OR CALENDAR QUARTER CONSIDERED.

Called to order by President Davis at 2:30 p. m.

Present: Drs. Davis, McCoy, Tucker, Wishard, Hurty.

Minutes of last regular meeting of July 13, 1906, read and approved.

QUARTERLY REPORT OF THE SECRETARY.

I have to report that the work of the various departments has gone on without interruption and without friction during the quarter.

The Secretary made twenty visits during the quarter, as follows:

July 2, Spiceland, on account of inspection of schoolhouse, at request of citizens.

July 9, Frankfort, account of inspection of tuberculosis conditions and conference with city Health Officer.

July 25, South Bend, account of tuberculosis exhibit and lecture to public audiences.

July 30, Kennard, account of inspection of schoolhouse, at request of citizens.

July 31, Petersburg, on account of inspection of schoolhouse, at request of citizens.

August 6, Kokomo, to meet the County Superintendent and Trustees of the county to consider the subject of school hygiene.

August 8, Greensburg, on account of tuberculosis exhibit, and to lecture to Teachers' Institute and to public audiences at night.

August 20, Decatur, on account of tuberculosis exhibit and to lecture to Teachers' Institute, and to lecture to popular audience at night.

August 27, Merom, to lecture before the Merom Chautauqua upon the subject of "The Prevention of Disease."

August 30, New Castle, to consider school hygiene before the Teachers' Institute, and to meet the County Superintendent and Trustees.

September 5, Noblesville, to lecture before the County Teachers' Institute upon the subject of "School Hygiene," and inspect schoolhouse.

September 7, Monticello, to lecture before the County Teachers' Institute and meet with the County Superintendent and Trustees to consider school hygiene.

September 16, Ottawa, Ill., to visit the Ottawa Tent Colony, and to study the outdoor treatment of tuberculosis as practiced at that place.

September 20, Madison, on account of tuberculosis exhibit, and to make public lecture on the subject.

September 25, Columbia City, to appear before the Whitley County Medical Society, read a paper upon "The Prevention of Disease," and to deliver a public lecture in the evening.

September 26, Peru, to lecture upon the work of the Board of Health and the prevention of disease before the Y. M. C. A.

September 28, Richmond, to meet Prof. Sackett and Dr. Davis to consider the proposed employment of Prof. Sackett to make a sanitary survey of White River.

October 2, Rochester, to meet with the Fulton County Medical Society to present the subject of "Disease Prevention," and to lecture in the evening upon the "Prevention and Cure of Tuberculosis" before a popular audience.

October 8, Muncie, to lecture before the State Charities Conference upon the subject of "Tuberculosis."

October 10, Muncie, to read a paper before the Indiana State Federation of Women's Clubs, title, "What Can the Federation Do to Help Forward the Public Health Work."

October 11, Winona, to read a paper before the Women's Federation of Literary Clubs, title, "Tuberculosis; Its Prevention and Cure."

TUBERCULOSIS. MEETING AT SOUTH BEND.

On July 25, upon invitation of the St. Joseph Medical Society and the health authorities of South Bend, I visited that place, carrying with me the tuberculosis exhibit of the Board. Upon arrival said exhibit was promptly put into position, and at 2 o'clock a lecture upon the "Prevention of Disease" was delivered to an audience of about five hundred persons. In the evening the exhibit was visited by one thousand persons, and when gathered in the audience chamber I made an illustrated address upon the "Cure of Tuberculosis in the Incipient Stage." The following day, July 26, another audience inspected the exhibit and further addresses were made. The South Bend daily papers published full accounts of the meeting and the addresses, and gave editorials upon the subject. It is believed that this visit was attended with good results, and was many times worth the work and expense given to it.

SCHOOLHOUSE AT KENNARD.

The school building at Kennard was condemned by the State Board of Health last fall, and the authorities were in dispute as to the location of the new building. The controversy ran high, and at last all concerned agreed to abide by the decision of the Secretary. Accordingly I visited the place, met the committees of citizens, inspected the various proposed sites, and made my recommendations. I have since learned that a second compromise was effected, and the old site was adopted.

PETERSBURG SCHOOLHOUSE.

The schoolhouse at Petersburg is brick, a very old structure, and unsanitary in every respect. The people of the city know this to be true. Several letters were received from citizens asking the State Board of Health to make inspection of the building. All of these represented that the majority of the patrons were afraid of the present schoolhouse because of its cracked walls and general unsafe condition, and also because it was unsanitary. They were told to petition the State Board of Health in regard to the building to show that the people were in favor of action. Accordingly the following petitions were received. The first one was dated May 11, the second August 3, accompanied by a letter signed by the Treasurer and Secretary of the School Board:

PETITION.

Petersburg, May 11, 1906.

State Board of Health:

Gentlemen—We, the undersigned patrons of the Petersburg public school, do hereby petition you to visit this place and make an examination of the school buildings here. In our judgment the building is unsafe and unsanitary and should be condemned.

DR. T. W. BASINGER,
Ex-Secy. County Board of H., and 69 others.

Petersburg, August 7, 1906.

We are enclosing you a certified copy of the petition gotten up here in the last few days relative to the building of a new schoolhouse. Mr. Nichols, president of the School Board, is out of town and will not be home for ten days. His absence accounts for his not joining us in the affidavit herewith attached.

The original petition is kept here to file with the clerk of the town, to which officer you are referred if you deem it advisable for further information. The petition is to be brought before the Town Board for the purpose of securing a permit in accordance with the law to proceed to the erection of a school building.

In the last town election there were 489 votes polled. Since then, owing to the closing down of the glass factory, about eighty voters have gone from here, leaving at this time about 409 voters in the corporation. As you will observe, there are 351 signatures to the petition, making almost 86 per cent. of the present voting population of the town. Some voters are out of town and were not canvassed. In all there are not more than twelve or fifteen voters in the corporation opposed to the plans of the School Board, and they are under the direct influence of interested parties.

J. R. CHEW, Treasurer.

H. H. TISLOW, Secretary.

PETITION.

Petersburg, August 3, 1906.

We, the undersigned taxpayers and patrons of the Petersburg, Indiana, public schools, knowing the unsanitary and dangerous condition of the public school buildings in said town, and further knowing the said school buildings are inadequate to properly accommodate the large number of school children in said town, hereby ask that a new and commodious school building be erected at the earliest possible date.

I. H. LAMAR, M. D., and 350 others.

On account of these petitions the Secretary visited Petersburg on July 31. A delegation of citizens, headed by the members of the School Board just named, and accompanied by the entire town board, accompanied the Secretary to the building. A very casual inspection shows it to be unsafe, for the walls on every side

are cracked. It is braced with iron rods running through the building from all four directions. The floors are in bad repair, every room improperly lighted, insufficiently ventilated, and insufficiently warmed. The stairway leading to the upper story is boxed part of the way, narrow and steep. It is unnecessary to here detail the size of the rooms with the lighting facilities, because the whole building is so bad from every point of view. There are closets for the sexes in the basement which are hardly possible. They have cemented floors, but are dimly lighted by windows which enter just above the ground level. The entrances to said closets are from the rear of the building, and the children must walk from the front around the building to use them. As said above, every feature of this building is unsanitary, and it is also unsafe. I, therefore, urgently recommend its absolute condemnation for school purposes. The building is occupied at this time, has had some repairs and further bracing, and it perhaps would be best not to close the building, but to let it be used this winter, and to pass an order of condemnation to take effect June 1, 1907. It is to be regretted that the petition could not be attended to sooner. Had it been possible for the Secretary to make the survey soon after the first petition was received, which was May 11, the condemnation might have been early enough to secure a new building for this winter.

KOKOMO.

On August 6 I visited Kokomo to meet the County Superintendent and Trustees of the county to consider the subject of school hygiene. Two hours work was consumed in discussing what could be done to better the sanitary surroundings of the school children in the country schools of Howard County. The fact in regard to the prevalence of imperfect vision in school children was presented, and a sample of Snellen's vision chart was shown. The Trustees were urged to purchase a supply of these charts, and to direct their teachers to watch the children closely and examine the eyes of all who wrinkled their foreheads when looking at their books and who would be discovered glancing at their work at various angles. They were urged also to require that the teachers examine the ears of children who seemed dull

and would ask to have questions repeated. The Trustees were unanimous that they would attend to this. Further recommendations were given in regard to ventilation and lighting the school-rooms, also in regard to keeping them clean. Prof. E. E. Roby, County Superintendent, formulated the recommendations in writing, and they were agreed to by all present. I am confident this conference with the Trustees of Howard County was attended with excellent results.

Meeting of County Commissioners.—Finding that the County Commissioners were in session, I called upon them with the secretary, Dr. R. H. Smith. In a general conversation upon the care of the public health the facts of the relations of the County Board to the work were fully brought out. All three of the Commissioners were deeply interested, and a formal meeting of the County Board of Health was called. An order was issued authorizing the County Officer to have circulars printed upon the prevention of various diseases and circulated throughout the county. An order was also passed that the Secretary should also employ a deputy when necessary for the disinfection of houses which had been occupied by cases of infectious diseases. It is certainly true that this conference with the County Health Board resulted in much good.

GREENSBURG.

On account of an invitation from the Decatur County Medical Society and the County Superintendent of Schools, I visited Greensburg August 8. Dr. Knabe accompanied me to aid in the management and presentation of the tuberculosis exhibit. We had two meetings, one in the afternoon and one in the evening. The tuberculosis exhibit was placed in position in one of the large rooms of the high school building, and during the day was visited by several hundred citizens and all of the teachers, numbering 210. A lecture upon school hygiene was delivered before the teachers in the afternoon; and in the evening, the hall being crowded and overflowing, an illustrated lecture upon tuberculosis was given. A vote of thanks was offered for the instructions, and also a vote of confidence and approval of the general work of the State Board of Health.

DECATUR.

I visited Decatur August 20 in answer to an invitation of the citizens of the city and the county superintendent. The tuberculosis exhibit was taken along and placed in position in the lecture room of a church where the teachers' meetings were held. This exhibit was visited by several hundred citizens and all of the teachers. In the afternoon a lecture upon school hygiene was delivered before the institute, and in the evening a popular illustrated lecture upon the prevention and cure of tuberculosis. The audiences in both instances were large. In the evening all who applied could not be admitted. As in former instances of this kind, resolutions of thanks and confidence and approval of the work of the State Board of Health were passed.

MEROM.

On August 22 I visited Merom, Sullivan County, to lecture upon disease prevention and the public health at the Merom Chautauqua. This Chautauqua Assembly has become quite celebrated. The grounds are situated on the east bank of the Wabash River, overlooking vast areas of beautiful country, the Wabash being visible in its windings for many miles. It is a beautiful spot, and a fit place in which to study the questions which are usually presented at assemblies of this kind. The audience numbered about fifteen hundred, and close attention was given to the teachings which were offered.

NEW CASTLE.

August 30 I visited New Castle to address the annual Teachers' Institute upon the subject of school hygiene and the general prevention of disease. The conference was held in the court room of the county court house. Two hundred and fifteen teachers were present, and probably one hundred citizens. The address, which was along the usual lines, was well received, and a warm resolution of thanks was passed.

NOBLESVILLE.

September 5 I went to Noblesville to lecture upon school hygiene and the general prevention of disease before the County Teachers' Institute. Over three hundred teachers were present

and a number of citizens. This is the third time the Secretary has been invited to Noblesville, and he thinks this indicates that the people of that county have become deeply interested in disease prevention work. Much of this interest is undoubtedly due to the work of Dr. F. A. Tucker, who has persistently made known to the public the advantages to be derived from the ounce of prevention. Close attention was given to the lecture, and a resolution of thanks was passed.

The Britton Schoolhouse.—This schoolhouse is in Delaware Township, Hamilton County. I visited this schoolhouse to make a survey of the same in company with Dr. F. A. Tucker, September 5.

Site.—The site is satisfactory, having good natural drainage but no artificial drainage, which hardly seems necessary.

Building.—The building is an old dilapidated frame, stone foundation, no basement, and only one room. This room is 30 x 24 feet. It contains 48 desks and has an enrollment of 17. The floor is bad; ceiling is broken in places, and has fallen off; no cloakroom; heated by stoves; ventilation only by windows and doors; roof is in bad condition. Windows are six in number, three on each side, and furnish sufficient light, but are objectionable on account of cross-lights. The chimney is cracked and rests upon the joists which support ceiling. The chimney is unsafe. Further evidence in dilapidation lies in the fact that the paper is coming off.

Outhouses.—These are separate for the sexes, but dilapidated, and in places in awful condition.

Conclusion.—This schoolhouse is unfit for school purposes, and I recommend that it be condemned.

MONTICELLO.

September 7 I went to Monticello to lecture before the County Teachers' Institute. The meeting was held in the audience room of the high school building. Early in the spring the old high school building at Monticello was abandoned, thus necessitating the construction of a new one. The new building is beautiful, well built, and every attention has been given to sanitary features. The audience numbered over three hundred, and the usual lecture

was received with attention and respect, and the usual vote of thanks was passed, containing a clause expressing confidence in the work of the State Board of Health and approval of what it had done.

OTTAWA, ILL.

I visited Ottawa, Ill., September 16, in order to become acquainted with the work being carried on there in the cure of tuberculosis in the Ottawa Tent Colony. This institution was founded three years ago by the Illinois State Medical Society in order to make plain to the people that incipient tuberculosis was curable in the climate of this region. The institution started with three patients, an ordinary frame dwelling for an administration building and an old frame structure for surgical and general purposes. In three years the institution has grown until there is now found upon this beautiful site a large administration building, which cost thirty thousand dollars, and seventy-five tents, all arranged in streets. The site of the colony is on the high western banks of the Illinois River. The view from the administration porches is very beautiful. The winding river and the fertile bottoms to the north and woods and meadows to the south. The grounds are laid out with curved paths and flower-beds, and the shrubbery has been tastefully placed. Dr. J. W. Pettit is the presiding genius, and is aided by Dr. Butterfield. There were fifty-seven patients at the time of my visit, and five nurses. The treatment of the patients is the well known out-door life, with an abundance of plain, well cooked food given at regular intervals and under rational directions.

The bathhouse, which is a separate building, furnishes every facility required in such a building. Life is entirely out of doors, the tents simply sheltering the patients from the dews and rain. At night when they are in bed the flaps at both ends are opened, and the air blows over their faces and their bodies all night. All tents have wooden floors and are very simple and plainly furnished. Dr. Pettit is a master in this work, for he has built up this institution from nothing until it has become known all over the United States as one of the best conducted and most successful of private sanatoriums for consumptives. I secured sets of blanks used at this institution, also took copious notes in regard

to the management of patients and in regard to diet, entertainments, and the various points used in the cure of the disease. This visit was most satisfactory, and the benefit derived can not be expressed in a few words.

MADISON.

In conjunction with Dr. Geo. T. McCoy I visited Madison September 20 in order to hold a tuberculosis symposium. The tuberculosis exhibit was carried along, and was shown in one of the rooms of the high school building. Many hundred people visited the exhibit, and Dr. McCoy and myself explained its various features. Addresses were delivered in the afternoon and the evening. In the afternoon the audience was small, but attentive and appreciative. In the evening it was large and overflowing the high school. It is certain that this visit to Madison was attended with good results. Many citizens expressed their approval and offered their services in procuring proper legislation in pushing onward the general health cause.

COLUMBIA CITY.

In response to a cordial invitation from the Whitley County Medical Society, I visited Columbia City on September 25. In the afternoon I read a paper before the Society entitled, "The Preparation of Antitoxins, Methods of Purification and Notes Upon Its Administration." The paper was given mostly to a consideration of diphtheria antitoxin. Its history was perfectly reviewed, and its preparation was entered into quite minutely. Special attention was given to the purification and concentration of the remedy as discovered and invented by Dr. Gibson of the New York Board of Health. The notes upon the administration were kindly received and thoroughly discussed. In the evening, under the auspices of the society, a public meeting was held in the Methodist Church, where I gave my usual illustrated lecture upon the prevention and cure of tuberculosis. Close and appreciative attention was given, and a cordial vote of thanks was passed.

PERU.

On September 26 I visited Peru to deliver an illustrated lecture upon "Tuberculosis; Its Prevention and Cure" before the Y. M. C. A. I was greeted by a large audience, which filled the hall to suffocation. The effort was certainly appreciated, for a unanimous vote of thanks was passed, and several speakers offered congratulations and confidence upon the work which was being done by the State Board of Health.

RICHMOND.

I went to Richmond September 28 to confer with President Davis and Prof. Sackett in regard to making a sanitary survey of White River. The object of the survey was to determine the degree and amount of pollution which this stream receives, so that authoritative data could be presented to the coming Legislature in regard to the matter.

Upon arrival I first met Dr. Geo. H. Grant, County Health Officer, who expressed himself as highly concerned in regard to the typhoid existing in the city. He reported seventeen cases in September, and at the time of the visit there were eight in the City Hospital. Many mild cases had existed, as was proved by blood examinations made in the State Laboratory. Mr. Barnard, Chemist of the Board, had visited at Richmond and made a survey of the water works, and numerous analyses were made, and his report is inserted herewith. A review of this report shows that the Gorman gallery had certainly received water from the river. Subsequent examinations by workmen discovered a large hole, probably four inches in diameter, leading through the bank, thus confirming the work of the chemist. This hole was stopped up, and appropriate cement walls built along the river's edge at the said gallery. This has completely shut off the river, and analyses since these improvements show the gallery water to be without fault. It is now believed that the Richmond supply is satisfactory in every respect. It is very probable that not a little of the typhoid was spread by the public water; yet it is certain that very many cases were caused by polluted wells. Together with Dr. Grant I visited the homes of six of the patients lying in the hospital with the fever. All of these homes might well be termed

typhoid homes. They all had shallow wells with dirty backyards, and open, reeking outhouses. None of the families were of that degree of cleanliness and neatness which is necessary to keep typhoid at a distance. While two of the patients whose homes were visited might have secured their disease from the public water supply, it is more than probable that they caught it at home.

In the evening, with Dr. Davis, I called upon Dr. Charles Bond, City Health Officer, and there the typhoid situation was thoroughly considered. Reports of the facts obtainable, together with the opinions of several physicians, pointed to the conclusion that the outbreak had passed its height and was now on the decline. It has not been deemed necessary to recommend to the people that the water from the public water supply be boiled, because only one of the galleries was found to be suspicious, and the source of its supply was so quickly corrected.

It was arranged with Prof. Sackett to commence the survey of White River as soon as he possibly could, and he would be paid from the general funds of the Board at the rate of \$250 per month.

REPORT OF EXAMINATION OF THE RICHMOND WATER SUPPLY.

H. E. Barnard, Chemist.

In response to a request from Dr. T. Henry Davis, health officer of the city of Richmond, and Howard Dill, superintendent of the Richmond Water Works Company, on August 27, 1906, I visited the various sources of supply, collected suitable samples for chemical and microscopical analysis. The results of the examination are as follows:

The water supply of the city of Richmond is furnished by the Richmond Water Works Company, and consists of a double system, employing both direct pressure on the mains and gravity system with reservoir. The water is taken from two sources, one the Cooper well, so called, and the other a chain of gallery wells sunk along the bank of the East Fork of the Whitewater at varying distances from the river.

THE COOPER WELL.

The Cooper well is situated near the center of a natural basin having a watershed two and one-half square miles in area. This watershed is largely cultivated land, and consists of several farms, each with a group of buildings, and has an approximate population of thirty persons and a large number of cattle and hogs. None of the farm yards or buildings are nearer than forty rods, and none are so located that drainage flows

in the direction of the well. The well consists of a large bricked basin covered and protected. The basin is about twenty feet deep and fifteen feet in diameter, and contains normally ten or twelve feet of water. The well is sunk in a bed of gravel overlaid with two feet of black loam. The gravel is fine and the bed evidently covers the entire area of the watershed, and is, in fact, a large natural filter. The well is supplied with water from this gravel bed, a surface or shallow well water derived from the rains falling upon the watershed and modified by slow filtration and oxidation of organic matter. The temperature of the water is nearly constant at 52 degrees F. throughout the year. An analysis of the water shows a normal water containing a small amount of iron, which slowly precipitates when the water is exposed to light and air. Pathogenic and sewage bacteria are absent. The water from the Cooper well flows by gravity through a 16-inch pipe to the pumping station, being carried over the eight feet of elevation at the crest of the basin by a syphon, and there enters a receiving basin, is mixed with gallery water and pumped directly to the mains, the overflow going to the reservoir

THE WHITE GALLERY.

The White gallery, so called, is simply a well which extends under the ground horizontally for some hundred feet. It is arched over with brick laid in cement and built upon a stone foundation, and so constructed that water can enter only from the bottom. The gallery is 100 feet from the bed of the river, and derives its supply from the watershed extending above and away from the river for an eighth of a mile or more, and from infiltration from the East Fork of the Whitewater. The analysis of the water shows no pollution whatever. The water is of the same composition as the river water, except that a more complete oxidation has taken place, as is shown by decreased albuminoid ammonia content, the absence of nitrites and increased nitrates.

It is evident that the earth bank, 100 feet or more in thickness, between the gallery and the river is acting as an efficient filter and is removing entirely all of its undesirable characteristics that are present in the river water itself.

THE HILL GALLERY.

The Hill gallery, so called, is constructed like the White gallery, being a brick arched gallery 600 feet long, some 150 feet from the bed of the river, which it parallels. The composition of the water is excellent and is identical with that from the White gallery.

THE GORMAN GALLERY.

The Gorman gallery, located along the river bed some twenty-five feet from the bank, and the nearest gallery to the pumping station, is constructed like the other galleries. It receives water from the Hill gallery, and under usual conditions delivers a mixed supply. The sample analyzed was taken at the lower end of the gallery after the supply had been cut off from the Hill gallery, and represents as nearly as possible

the water which collects in the Gorman gallery. The composition of the water is very similar to that of the raw river water. The albuminoid ammonia is higher than in the other gallery samples, the nitrates lower; nitrites are present, and the sample examined showed *B. coli* present in both 5 c. c. and 1 c. c. samples. It is evident that the Gorman gallery is receiving water from the river that is not fully oxidized, and that the twenty-five feet of earth between the river and the gallery is insufficient to purify properly the water.

THE RESERVOIR.

Under ordinary conditions the water service is by direct pressure on the mains, but, as an auxiliary supply, a reservoir is provided with a capacity of 8,000,000 gallons. The reservoir is twenty-five feet deep, covering an area of two acres, and has a cemented bottom and sloping sides built of stone laid up with loose joints. The interstices between the stones are filled with mud and sludge, and afford a foothold for algae and grasses. The composition of the water in the reservoir, as is indicated by the several analyses made of samples collected on different days, is practically constant and is an average of the supplies from the Cooper well and the other galleries. There is a decided increase in albuminoid ammonia and nitrite contents, together with lowered solids and hardness. The increased ammonia contents are due to the presence in the supply of decomposing organic matter, and the lessened solids to the precipitation of iron and calcium salts in the form of sludge, due to the continued exposure of the water in the reservoir to the sun and air. A bacterial examination of the water made on a sample kept at ordinary summer temperature for twenty hours showed but 31 per cc., after forty-eight hours' growth, a very favorable showing indeed. There is a perceptible odor to the water at the reservoir, which becomes pronounced after the water has stood in a closed receptacle or is heated. The odor is due to the decomposition of a plant of the order "characeae," known as "chara." The characeae are plants which occupy an intermediate position between the algae and the higher cryptograms. The plant has a distinct stem, with whorls or branches at regular intervals. These branches are sometimes spoken of as leaves, and at the lower end of the stem assume a root-like form which fastens the plant to the mud and gives it stability. This characteristic of the plant makes it impossible to eradicate it except by taking away its means of support. This can be done by cementing the walls of the reservoir. The characeae injure the water only by rendering it unpleasant to the taste and smell. This species possesses the property of secreting calcium carbonate, and properly serve in a measure to soften the water in the reservoir.

SUMMARY.

The water supplying the city of Richmond is of excellent quality, free from an excess of organic matter and iron. The water from the Cooper well is slightly harder than that from the galleries, and contains a slight amount of iron that precipitates out on standing.

The White and Hill galleries provide a supply of pure, well-filtered water, probably largely derived from the East Fork of the Whitewater. The filtration is perfect, and the distance between the galleries and the river insures continued efficiency of the intervening earth well as a filter.

The Gorman gallery receives water from the river which has not been thoroughly purified. It is of practically the same composition as the river, containing high albuminoid ammonia, nitrites and the bacilli coli communis. The Gorman gallery is located too near the river, for while all sediment is removed, the filtration is not sufficient to remove pathogenic bacteria, and oxidation of organic matter is not completed as in the case of the other galleries. The reservoir is well located, protected against outside contamination, and, except for the presence of the chara, in good condition. The chara can best be eradicated by drawing off the water, cleaning out the interstices between the stones forming the sides and washing with a strong cement, so that the crevices are filled and no lodgment provided for mud and sediment. It is not necessary to put a cement floor on the side of the reservoir, as has been done to the bottom, as a comparatively inexpensive wash will serve the same purpose.

In enlarging the capacity of the system, water taken from the basin near the Cooper well or from gallery wells located at least 100 feet from the river bank will be entirely satisfactory, free from the possibility of present or future pollution, and of a moderate hardness and well adapted to the uses of a public water supply.

*Decided musty. †Very slight.

ROCHESTER.

On October 2, in response to an invitation of the "University Association of Rochester," I visited this place to give my illustrated lecture upon the "Prevention and Cure of Tuberculosis."

I was surprised to be made the honor guest of a dinner by Dr. Shafer, who had invited the physicians of the county to said dinner in his new sanatorium. The occasion was most enjoyable, and the communication with these practitioners of the county was surely beneficial to the public health cause.

In the evening my lecture was delivered in church, that was filled and overflowing. Upon arrival I was unable to get in at the front, and was compelled to enter through a rear door. Mr. Bidder, editor of the Rochester Republican, manipulated the lantern, and among the audience was Senator Stephenson and Mr. Barnhart, editor of the Rochester Sentinel. The superintendent of the schools, the mayor and the president of the Rochester College, with teachers and citizens, were present. A resolution of thanks and approval, also commendation of the work of the State Board of Health was passed.

MUNCIE.

On October 8 I visited Muncie to deliver the usual illustrated lecture upon "Tuberculosis; Its Prevention and Cure," before the meeting of the citizens with the State Charities Association. Attorney-General Miller presided, and State Senators Kimbrough and Hendee, together with prominent citizens, were present in the audience. Gen. Miller, as presiding officer, made an address in which he approved and urged others to help in the work of creating a State health farm for consumptives. My lecture was followed with fifteen minute remarks by Dr. Hugh Cowing, Health Officer of Delaware County, and the same time was given to "The Social Aspect of Tuberculosis," by Mr. Fagg, of Evansville. This meeting was a very great success, and doubtless much good was accomplished.

MUNCIE.

October 10 I visited Muncie to lecture before the Indiana Federation of Women's Clubs. The lecture was entitled "What Can the Women Do to Help On the Public Health Cause?" The exercises were held in the Commercial Club rooms, the same being crowded to overflowing. The lecture called the attention to the fact that almost one thousand mothers in the ages of eighteen to forty died annually of one disease, and this is a preventable

disease; that their sisters, the women of the State, could certainly do a great deal to bring before the people the importance of preventing tuberculosis. Many of the well known methods now practiced in this work were reviewed and detailed, special stress being laid upon the point that "success lay in education." Resolutions of thanks were adopted on account of the lecture, and expressing confidence and approval in the work of the State Board of Health.

DEATHS AND DISEASES DURING THE QUARTER.

Total deaths 8,812. In same quarter last year 8,525. There was more smallpox than in same quarter last year, and fewer deaths, but other infectious diseases show no diminution.

The following table gives the smallpox comparisons:

	No. of Cases Reported.	No. of Deaths.	No. of Counties Invaded.
July, 1905	31	3	6
July, 1906	18	1	6
August, 1905	10	0	5
August, 1906	40	0	3
September, 1905	19	0	8
September, 1906	51	2	10

Typhoid fever seems not to have prevailed as extensively as in the corresponding quarter last year, as the table makes plain:

	No. of Cases.	Counties Invaded.	No. of Deaths.
July, August, September, 1905.....	2,167	74	403
July, August, September, 1906.....	1,633	49	254

In September many letters from physicians spoke of the prevalence of mild typhoid fever, and blood tests in the laboratory have given the Widal reaction in instances where the disease was not suspected.

PROSECUTION OF BUTCHERS.

The prosecuting attorney of the Indianapolis district was duly informed of the adulteration of sausages and chopped meats found in the Indianapolis Market. The attorney thereupon began direct prosecution in the Marion County Criminal Court in July, 1906. Fourteen meat dealers were arraigned, their names appearing below in the report of the Chemist. The first case tried was

against Harry Matzke, charged with using sodium sulphite as a preservative and color keeper in Hamburg steak.

The trial attracted much public attention, for the defendants brought expert witnesses from Chicago and other places to testify to the harmlessness of sulphite of soda in food as a preservative. The trial extended over three days, and evidently the jury was not convinced that sodium sulphite was injurious to health, for it stood seven to five for conviction.

Upon consultation with the prosecutors, it was decided that as all the dealers promised not to use preservatives hereafter, that it would be best not to bring the accused to trial, and accordingly the cases were dismissed. Following is the record of the dealers and the articles adulterated.

Food samples collected by H. E. Barnard and Norris Thompson on the East Market in Indianapolis, Indiana, Tuesday, June 19, 1906, with the results of analyses made in the Chemical Division of the Indiana State Laboratory of Hygiene:

Article—Hamburger steak, purchased from A. Stuckmeyer, made by A. Stuckmeyer. Preserved with sodium sulphite, containing .173 per cent. of the same.

Article—Hamburger steak, purchased from F. Filtz, made by F. Filtz. Preserved with sodium sulphite, containing .147 per cent. of the same.

Article—Hamburger steak, purchased from F. W. Hebble, made by F. W. Hebble. Preserved with sodium sulphite, containing .164 per cent. of the same.

Article—Hamburger steak, purchased from William Grund, made by William Grund. Preserved with sodium sulphite, containing .429 per cent. of the same.

Article—Hamburger steak, purchased from Sam Davis, made by Sam Davis. Preserved with borax, amount not determined.

Article—Hamburger steak, purchased from Sam Davis, made by Sam Davis. Preserved with sodium sulphite, containing .226 per cent. of the same.

Article—Hamburger steak, purchased from Steinmetz Bros., made by Steinmetz Bros. Preserved with sodium sulphite, containing .482 per cent. of the same.

Article—Hamburger steak, purchased from Harry Matzke, made by Harry Matzke. Preserved with sodium sulphite, containing .260 per cent. of the same.

Article—Hamburger steak, purchased from Thos. Dietz, made by Thos. Dietz. Preserved with sodium sulphite, containing .101 per cent. of the same.

Article—Sausage, purchased from J. Deschler, made by J. Deschler. Preserved with sodium sulphite, containing .121 per cent. of the same.

Article—Sausage, purchased from Hilgemeier & Bro., made by Hilgemeier & Bro. Preserved with sodium sulphite, containing .106 per cent. of the same.

Article—Sausage, purchased from Steinmetz Bros., made by Steinmetz Bros. Preserved with sodium sulphite, containing .295 per cent. of the same.

Article—Sausage, purchased from Harry Matzke, made by Harry Matzke. Preserved with sodium sulphite, containing .090 per cent. of the same.

Article—Bologna, purchased from F. Filtz, made by F. Filtz. Preserved with sodium sulphite, containing .147 per cent. of the same.

Article—Weinerwurst, purchased from F. W. Hebble, made by Albert Worm. Preserved with borax, amount not named.

Article—Weinerwurst, purchased from Sindlinger Fresh Meat and Provision Co., made by the Sindlinger Fresh Meat and Provision Co. Preserved with sodium sulphite, containing .025 per cent. of the same.

Article—Veal loaf, purchased from Harry Matzke, made by Harry Matzke. Preserved with sodium sulphite, containing .135 per cent. of the same.

Food samples collected by H. E. Bishop and Philip Brodus on the East Market in Indianapolis, Indiana, on Tuesday, June 19, 1906, with the results of analyses as made in the Chemical Division of the Indiana State Laboratory of Hygiene:

Article—Hamburger steak, purchased from Chas. Mock, made by Chas. Mock. Preserved with sodium sulphite, containing .131 per cent. of the same.

Article—Hamburger steak, purchased from W. H. Heckman, made by W. H. Heckman. Preserved with sodium sulphite, containing .501 per cent. of the same.

Article—Hamburger steak, purchased from Fred Wuster, made by Fred Wuster. Preserved with sodium sulphite, containing .026 per cent. of the same.

Article—Hamburger steak, purchased from Geo. Woessner, made by Geo. Woessner. Preserved with sodium sulphite, containing .170 per cent. of the same.

Article—Hamburger steak, purchased from Thos. Castor, made by Thos. Castor. Preserved with sodium sulphite, containing .144 per cent. of the same.

Article—Hamburger steak, purchased from A. L. Heckman, made by A. L. Heckman. Preserved with sodium sulphite, containing .014 per cent. of the same.

Article—Hamburger steak, purchased from E. F. Overman, made by E. F. Overman. Preserved with sodium sulphite, containing .030 per cent. of the same.

Article—Hamburger steak, purchased from Henry Coleman, made by Henry Coleman. Preserved with sodium sulphite, containing .319 per cent. of the same.

Article—Hamburger steak, purchased from J. G. Schilsa, made by J. G. Schilsa. Preserved with borax, amount not determined; preserved with sodium sulphite, containing .015 per cent. of the same.

Article—Hamburger steak, purchased from Joe Cook, made by Joe Cook. Preserved with sodium sulphite, containing .298 per cent. of the same.

Article—Sausage, purchased from H. W. Heckman, made by H. W. Heckman. Preserved with sodium sulphite, containing .160 per cent. of the same.

Article—Sausage, purchased from Geo. Woessner, made by Geo. Woessner. Preserved with sodium sulphite, containing .258 per cent. of the same.

Article—Sausage, purchased from Chas. Weeksler, made by Chas. Weeksler. Preserved with sodium sulphite, containing .188 per cent. of the same.

Article—Sausage, purchased from Meier-Meuser Packing Company, made by Meier-Meuser Packing Company. Preserved with sodium sulphite, containing .063 per cent. of the same.

Article—Sausage, purchased from Meier-Meuser Packing Company, made by Meier-Meuser Packing Company. Preserved with sodium sulphite, containing .045 per cent. of the same.

Article—Veal loaf, purchased from Joe Cook, made by Joe Cook. Preserved with sodium sulphite, containing .279 per cent. of the same.

Article—Frankfurter, purchased from Meier-Meuser Packing Company, made by Meier-Meuser Packing Company. Preserved with sodium sulphite, containing .050 per cent. of the same.

COLLECTED JUNE 23, 1906.

Article—Hamburger steak, purchased from L. Nageleison, made by L. Nageleison. Preserved with sodium sulphite, containing .141 per cent. of the same.

Article—Sausage, purchased from L. Nageleison, made by L. Nageleison. Preserved with sodium sulphite, containing .240 per cent. of the same.

Article—Hamburger, purchased from Henry Coleman, made by Henry Coleman. Preserved with sodium sulphite, containing .054 per cent. of the same.

Article—Sausage, purchased from Henry Coleman, made by Henry Coleman. Preserved with sodium sulphite, containing .076 per cent. of the same.

Article—Hamburger, purchased from Jos. Parent, made by Jos. Parent. Preserved with sodium sulphite, containing .083 per cent. of the same.

Article—Hamburger, purchased from Steinmetz Bros., made by Steinmetz Bros. Preserved with sodium sulphite, containing .068 per cent. of the same.

Article—Sausage, purchased from H. Matzke, made by H. Matzke. Preserved with sodium sulphite, containing .214 per cent. of the same.

Article—Veal loaf, purchased from H. Matzke, made by H. Matzke. Preserved with sodium sulphite, containing .234 per cent. of the same.

Article—Hamburger, purchased from H. Matzke, made by H. Matzke. Preserved with sodium sulphite, containing .194 per cent. of the same.

Article—Hamburger, purchased from Jos. Fischer, made by Jos. Fischer. Preserved with sodium sulphite, containing .039 per cent. of the same.

Article—Hamburger, purchased from Chas. Cherdon, made by Chas. Cherdon. Preserved with sodium sulphite, containing .201 per cent. of the same.

Article—Sausage, purchased from Chas. Cherdon, made by Chas. Cherdon. Preserved with sodium sulphite, containing .075 per cent. of the same.

Article—Hamburger, purchased from William Grund, made by William Grund. Preserved with sodium sulphite, containing .430 per cent. of the same.

Article—Sausage, purchased from Meier-Meuser Packing Company, made by Meier-Meuser Packing Company. Preserved with sodium sulphite, containing .040 per cent. of the same.

Article—Hamburger, purchased from Sindlinger Fresh Meat and Provision Company, made by Sindlinger Fresh Meat and Provision Company. Preserved with sodium sulphite, containing .402 per cent. of the same.

Article—Sausage, purchased from Sindlinger Fresh Meat and Provision Company, made by Sindlinger Fresh Meat and Provision Company. Preserved with sodium sulphite, containing .312 per cent. of the same.

INSPECTION OF SLAUGHTER HOUSES.

In July Dr. Davis directed that an inspection of slaughter-houses in the State be made. Accordingly a blank was prepared and supplies of the same sent to all city and town health officers. Of the 390 officers of this class, 351 promptly replied by making surveys of the slaughter-houses furnishing meats in their jurisdictions. Upon review of the records it appears that of 460 slaughter-houses inspected 77 per cent. were exceedingly unsanitary, 16 per cent. passable, and only 7 per cent. in good condition. Some of the terms used in describing the conditions were: "revolting," "horrible stench," "rotting blood and entrails," "indescribably awful," "sickening."

In August letters were sent to the authorities of cities and towns where unsanitary slaughter-houses were reported, calling attention to the necessity of correction. It was recommended that an ordinance be passed excluding meats from any slaughter-house which was not sanitary according to the definition laid down in said ordinance. The ordinance read as follows:

An Ordinance Regulating the Meat Supply, Prescribing the Sanitary Conditions of Meat Shops, Butcher Shops, Slaughter Houses, Fish Markets, and Public Eating Houses; Prescribing How Meats and Carcasses of Animals Intended for Human Food Shall Be Handled, Empowering Officers for the Enforcement Thereof, and Repealing All Ordinances in Conflict Therewith.

Section 1. Be it ordained by the Mayor and Council of the City of _____, That it shall be unlawful, within the corporation of the City of _____, to sell, barter or give away the flesh of any animal intended for human food, which animal has not been slaughtered and the carcass prepared and kept and handled according to the regulations given in this section; and, the carcass of any animal offered for sale for human food within the corporation of the City of _____, which has been prepared otherwise than according to said regulations, is hereby declared to be unclean and is condemned as unfit for human food and it shall be the duty of the City Police, and of the City Health Officer and his Deputies, and the power is hereby given to said officers to summarily seize and drench with kerosene oil any animal carcass or parts of a carcass which they may discover within the corporation of said City, when to their knowledge the carcass or parts of a carcass have not been slaughtered, prepared and handled according to said regulations, and, any person convicted of selling such carcass or parts of a carcass shall be fined in any sum not less than twenty-five nor more than one hundred dollars.

REGULATIONS.

- (1) The animal shall be absolutely healthy and sound.
- (2) All slaughter houses or abattoirs in which slaughtering is done shall have water-tight, hardwood, asphalt or cement floors, be well lighted, thoroughly ventilated and drained, supplied with an abundance of pure water, windows and doors provided with screens, ceilings, side walls, posts, pillars, partitions, etc., shall be frequently whitewashed or painted, or, when this is impracticable, they shall, when necessary be washed, scraped or otherwise rendered sanitary. When floors or other parts of slaughter houses, abattoirs or butcher shops, as tables, racks, trucks, trays, counters, refrigerators, meat blocks, etc., or other parts of the equipment, are so old or in such a condition that they can not be readily made clean and sanitary, they shall be removed and replaced or otherwise put in a condition approved by the City Health Officer. And, all equipment shall be kept clean and in a sanitary condition at all times.
- (3) All slaughter houses or abattoirs shall be provided with tanking apparatus for tanking and making all offal into fertilizer, which apparatus shall be in rooms separate from the killing rooms, but said tanking apparatus is not required if all offal is buried, cremated, or hauled away for tanking elsewhere. Said slaughter houses or abattoirs shall also be provided with ample cold storage facilities and all carcasses shall, as soon as properly dressed, be placed in cold storage until taken away, or said carcasses may be immediately removed elsewhere to cold storage. Said slaughter houses or abattoirs shall also be provided with proper facilities for rendering lard and tallow, and said facilities shall be in a room devoted exclusively to said purpose.

(4) All employes of said slaughter house, abattoir or butcher shop shall be clean in person, and, when at work shall wear aprons or smocks made of a material that is readily cleansed and kept sanitary, and the same shall be cleaned daily, if used; and spitting upon the floor or urinating thereon or other befoulment is absolutely forbidden.

(5) Said slaughter houses, abattoirs and butcher shops shall be provided with proper facilities for washing hands and also with proper water closet facilities, which shall at all times be kept clean.

(6) Swine shall not be fed on offal at the said slaughter houses, abattoirs and butcher shops, and the surroundings shall be kept clean at all times. The carcasses of swine fed upon offal are hereby declared to be unclean and are condemned and if offered for sale or are given away and are discovered within the corporation of the City of _____, the same shall be seized and drenched with kerosene oil, as heretofore set forth and commanded.

All carcasses and parts of carcasses intended for human food, during transportation from the slaughter houses or abattoirs, shall be carefully covered with canvas or white cloth so as to exclude all dust, dirt and flies or other insects, and such canvass or cloth covering shall be kept clean by frequent washings.

(7) It is provided that nothing in this section shall prevent the sale of animal carcasses, or parts of carcasses, or meats, which have been shipped into the City of _____, from any other point where the slaughtering houses or abattoirs are subject to inspection by the United States Government; and it is further provided that nothing in this section shall prevent any farmer or other person not regularly engaged in the sale of meats, from selling in said City any surplus meats he may have from his family supply, unless said meats upon inspection prove to be of diseased or injured animals or spoiled, or have been prepared or kept under unsanitary conditions, and in such instances the penalties and disposal as has heretofore been described shall be enforced.

Sec. 2. All butcher shops, meat markets and fish markets within the corporation of the City of _____, shall, from the first day of May until the first day of November, be provided with self-closing wire screens to all doors and windows, and said screens shall be close fitting and kept in good repair. Said shops and markets shall at all times be kept clean and free from all foreign and noxious odors, and all blocks and tools used in said places shall be kept clean and free from taints. All meats and fish intended for human food shall be so kept and handled as to not allow dust from the streets to settle thereon.

Sec. 3. Every hotel, restaurant, inn, tavern, boarding house and public eating house within the corporate limits of the City of _____ shall be kept clean and free from all offensive or unwholesome substances. Every such hotel, restaurant, inn, tavern, boarding house and public eating house shall, from the first day of May until the first day of October of each and every year, be provided with self-closing wire screens to all doors, windows and other outside openings, and all such screens shall be close fitting and kept in good repair so as to exclude flies and other insects. The kitchen connected with any such place shall be kept clean, well ventilated and well lighted and in a sanitary condition. The tables,

table linen, dishes, cooking utensils and all other articles used in and about such place shall be kept thoroughly cleansed and free from all taints and foreign odors. All persons employed in or about any such place shall keep themselves and their clothing clean. All parings, refuse, vegetables, fruits, meats and other waste matter, together with all slops, shall, within a reasonable time, be promptly removed from within such hotel, restaurant, inn, tavern, boarding house or public eating house, and deposited in the proper receptacle outside the building occupied by such establishment. All cellars and other places used by any such establishments as places for storage for fruits, vegetables, meats or other articles intended for human food shall be thoroughly disinfected whenever required by the Board of Health of said City, and shall be kept clean and free from all decayed matter of every description; and every such cellar or place of storage shall be so constructed as to exclude rats, mice and other vermin. All such hotels, restaurants, inns, taverns, boarding houses and public eating houses shall be subject to inspection by the Board of Health of said City at any and all times during business hours, and it is hereby made the duty of the members of said Board and of each of them, to make frequent inspections of all such places and to promptly enforce the provisions of this ordinance.

Sec. 4. It shall be unlawful for the proprietor or manager of any hotel, restaurant, inn, tavern, boarding house or public eating house within the corporate limits of the City of _____, either in person or by or through any employe, to serve to any customer or patron any watered milk, or any milk which has been "skimmed," or from which any of the cream has been taken before the milk is so served, unless there shall be posted in a conspicuous place in such public eating house a card stating in the English language that the milk served in such place is skimmed milk. And it shall be unlawful to place any preservative in any milk served to any customer or patron of any such place. All milk and butter intended to be served to customers and patrons of any such hotel, restaurant, inn, tavern, boarding house or public eating house shall be stored in some clean wholesome receptacle, separate and apart from all meats, fish, fruits, vegetables, and where it will not come in contact with the odors arising from the kitchen, or other odors of an injurious nature. The proprietor or manager of every such hotel, restaurant, inn, tavern, boarding house, or public eating house, shall, upon demand, deliver up to the Food Inspector of the City of _____, samples of the milk served to customers or patrons of such place, and it is hereby made the duty of said Inspector to make analyses of such milk and to file with the Common Council, once each month, a written report of the analyses.

Sec. 5. Any person, persons, company or corporation violating any of the provisions of this ordinance shall, upon conviction thereof, be fined, except as otherwise herein provided, for each offense, in any sum not less than one (\$1.00) dollar nor more than fifty (\$50.00) dollars, and each day's violation shall be deemed a separate offense.

Sec. 6. This ordinance shall take effect and be in force from and after its passage and publication once each week for two consecutive weeks in the _____, a daily newspaper printed and published in said City of _____, Indiana.

Very few replies to our "ordinance letter" were received, but it has been learned that several cities and towns passed the law either entire or modified. Among these places are Newcastle, Monticello, Auburn, Warsaw, Marion, Logansport and Sullivan.

THE SECOND ANNUAL MEETING OF THE NATIONAL ASSOCIATION FOR THE STUDY AND PREVENTION OF TUBERCULOSIS.

Washington, D. C., May 16-18, 1906, Reported by Geo. T. McCoy, M. D., Member of the Indiana State Board of Health, Columbus, Indiana.

To the President and the Members of the Indiana State Board of Health:

Gentlemen—As your representative I attended the second annual meeting of "The National Association for the Study and Prevention of Tuberculosis," which convened in Washington, D. C., May 16, 1906.

The first meeting was held in conjunction with the Association of American Physicians, and was addressed by Dr. Simon Flexner, of New York, on the subject of "Immunity in Tuberculosis." The meeting was presided over by Dr. Frank Billings, of Chicago. There were 500 delegates present at this first meeting, showing the interest the public is taking in the crusade against tuberculosis. Dr. Edward L. Trudeau, of Saranac Lake, New York, also addressed the meeting, detailing some of his results in preventive inoculation among animals. Dr. Trudeau was encouraged from his success to predict that the same results would ultimately be accomplished in treating human beings.

The general attendance of the meetings was something less than the first meeting, in 1905, but the character of the papers presented was beyond the standard then obtained.

The scientific work this year was grouped in five sections, two new ones (surgery and tuberculosis in children) having been added.

Many important and timely subjects were discussed. "Tuberculosis Nostrums" was the title of a characteristic paper by Samuel Hopkins Adams, of New York. He finds cause for the encouragement in the fact that the whole matter of nostrum control is under adjustment. Patent medicine bills have been agitated in many State Legislatures and the press of the country is taking a more commendable stand upon the subject.

"Three Cases of Placental Tuberculosis," illustrated by lantern slides, was the subject of a very interesting paper by Dr. Alfred Scott Warthin, of Ann Arbor. In the discussion Dr. W. H. Welch, of Johns Hopkins University, stated that the evidence is becoming stronger and stronger that conveyance from mother to fetus is at least not so very extraordinary, and is probably far more frequent than is commonly supposed. Twenty cases of placental tuberculosis have been reported. Dr. Welch regards the question of placental lesions as a subject of really fundamental importance in the etiology of tuberculosis. That tuberculosis in the new born does not more frequently develop has been explained in two ways: first, that the bacilli get in late, and hence there is no time for tuber-

culosis to develop; and, second, that the fetus is relatively insusceptible. The fetal blood may be filled with tubercle bacilli, and no localized lesion be developed. There is abundant evidence to show that the fetus may harbor tubercle bacilli for weeks without the development of lesions.

"The Serum Diagnosis of Tuberculosis" was presented by Drs. Kinghorn and Twitchell, of Saranac Lake. The results of their experiments seem to show that it is not a specific sign of the presence of tuberculosis, and that it is of no value in the early diagnosis of the disease. ("The Serum Prognosis of Tuberculosis" is attracting much attention, and is likely to become a valuable aid to the clinician.) The same may be said of the Opsonic Index of Wright and Douglas, especially in its relation to the treatment of tuberculin.

"The Therapeutic Use of Tuberculin Combined with Sanatorium Treatment of Tuberculosis" was the subject of an exhaustive report by Dr. Trudeau, in which he presented a summary of the impressions gained from its use at Saranac Lake since 1890. Tuberculin is a powerful agent and must be used with care. Fever reaction is not necessary, and every effort should be made to avoid its production; hence very minute doses are to be used in the beginning. The danger from tuberculin lies wholly in its faulty administration. Six months are almost always necessary for the treatment, and in many cases a year would be better. The reaction of the patient is of more value in determining the dosage than is the Opsonic Index. As a result of his experience Dr. Trudeau still holds to the opinion formed years ago, namely, that tuberculin aids in the sanatorium treatment of tuberculosis, but he regrets that there is no standard strength for the preparation, and that there is so little known positively about the action and the strength of the dose that would give the best results. Therefore its use must be left largely to the skill and judgment of the physician in each individual case.

One of the most important sessions was that devoted to "Tuberculosis in Children." A number of valuable papers were presented in this section, and the discussions were the most spirited of any during the entire meeting. In the absence of Dr. A. Jacobi, Dr. David Bovaird, of New York, presented the subject of "Sources of, and Portal Entry of, the Infectious Agents in Tuberculosis of Infants and Young Children." Dr. Bovaird has had a large experience in autopsies on children, and was well qualified to speak of the sources of infection as displayed in post-mortem findings. He said that while there were records of cases of local infection, tuberculosis of the skin, bones, the eye, etc., where there was no doubt that the infection came from contact of tuberculosis material with the part affected, they are so rare as to form an almost negligible quantity in the general consideration of the subject. The results of autopsies showed that infection came almost solely from two sources, the inhalation of the tubercle bacilli, or its ingestion with food. In this connection it is remarkable how few cases of intestinal tuberculosis are found even when the lungs are seriously affected, and where the patient must have been swallowing millions of tubercle bacilli every day. Reasoning from this standpoint, the drinking of milk from tuberculosis cows is not attended with very grave dangers, but the apparent protection of the intestinal glands in those having the disease in the lungs, may not extend

to the non-tubercular. He did not advocate any relaxation in the stringency of milk laws on this account. Tuberculosis of the intestinal tract is much more common among children in English, German and French hospitals than in American hospitals.

"Protection of Infants and Young Children from Tuberculosis" was the subject of a paper presented by Dr. John Lovett Morse, of Boston. This is an exceedingly difficult problem, especially in the crowded environment of tenements, and after such diseases as measles, whooping cough and influenza. The danger of infection of the children is greatest on account of their association with tuberculous parents. The parent should not be allowed to keep and handle the child; they should be separated at the earliest possible moment if the child is to escape infection. The establishment of as many playgrounds and places of outdoor exercise and entertainment as is possible should be urged upon those in authority, the results largely depending upon the amount of money that the public is willing to spend in its campaign of education and in making provision by means of sanatoria and other institutions for the care of less fortunate individuals.

Surgeon General Wyman addressed the Association in its last session on the methods employed by the Government for the prevention of the spread of consumption among Government employes. General Wyman related that in accordance with the resolution passed by the Association last year, the President had appointed boards of inquiry to determine the best method to be followed in the sanitation of public buildings, and the conduct of the employes in relation to tuberculosis. Under the terms of the executive order the public buildings under the War and Navy Departments will be inspected by boards of medical officers appointed by the respective Surgeons General of these two departments. All other public buildings will be inspected by boards appointed by the Surgeon General of the Public Health and Marine Hospital Service. The reports of these boards will be made under two distinct heads: first, unsanitary conditions immediately remediable; and, second, unsanitary conditions requiring structural changes. A start has been made in the City of Washington, and with the experience gained there the inspections will be gradually extended throughout the United States. The organization of this great work, as outlined above, has been most carefully considered, and it is confidently expected that great good will result.

In the absence of Dr. Herman Biggs, President of the Association, the annual address was delivered by Dr. Lawrence F. Flick, of Philadelphia, Vice-President. Dr. Flick spoke of the good work accomplished by the Association during the past year, prominent among which is the establishment of tuberculosis exhibition meetings throughout the country, and the bringing to this country the "International Tuberculosis Association" in 1908. The local exhibitions held in a number of cities of the country during the past winter accomplished a great deal of good in educating the people. The program is to be extended to other cities and towns. The advisability of establishing permanent exhibitions in the large cities is to be considered. For the Congress he urges the raising of a fund of \$100,000 for expenses, and the early opening in Washington City of an office for arranging the details of the meeting. Dr. Flick asserted that

the strength of the National Association lay in the fact that its ambition to eradicate consumption could be gratified. He advocated the establishment of hospitals, sanatoria, convalescent farms, public dispensaries, where the poor could be served, and the scientific care of the afflicted in their homes. He with others criticises the medical schools for turning out graduates unacquainted with the best methods of diagnosis, and the best means of combating the disease. To create a more widespread interest in the subject of the prevention of tuberculosis, he recommended the establishment of a lecture bureau, providing speakers to visit every part of the country, and disseminate knowledge of how to combat the disease successfully.

The emblem of membership of the National, State and Local Tuberculosis Associations was declared to be the double red cross.

It would be impossible in a report of this kind to more than mention the many excellent papers presented, and the earnest discussions following the reading of each paper. One must have been there to appreciate the great work accomplished at this meeting. The attendance at each session was remarkably good, and the best of attention was given to the reading and discussion of papers. The coming and going of members during the reading of papers, that is often so annoying at large meetings of this kind, was not noticed.

Besides the pleasure of listening to the reading and discussion of papers, the mingling with the delegates and listening to the words of wisdom from the lips of the great men in the profession in quiet conversation was a pleasure that one can scarcely forget. The whole meeting seemed to be pervaded with an atmosphere of earnestness and deep learning.

It was with much chagrin that your representative noticed the marks of evident surprise upon the countenances of inquiring members when the statement had to be made that the great State of Indiana, one of the foremost States of the Union, had no plan to care for her unfortunate consumptives.

Ordered, That Secretary's report be spread of record.

PETERSBURG SCHOOLHOUSE.

After full consideration of the report of sanitary survey of the Petersburg Schoolhouse as presented in the Secretary's report, the following proclamation was adopted:

PROCLAMATION.

Whereas, It is satisfactorily proven to the State Board of Health that the schoolhouse at Petersburg, Pike County, Indiana, is unsafe and very unsanitary; therefore it is

Ordered, That said schoolhouse is condemned as unfit for school use and purposes, the said condemnation to be in effect on and after June 1, 1907, and all school authorities and all teachers are commanded under pain of prosecution not to use said schoolhouse for school purposes on or

after said date, June 1, 1907. Unanimously passed this 12th day of October, 1906, in regular session of the Indiana State Board of Health, all members being present.

Attest: Pres.
Secy.

NEW BRITTON SCHOOLHOUSE.

After full consideration of the report of sanitary survey of the Britton Schoolhouse, as appears in the Secretary's report, the following proclamation was adopted:

PROCLAMATION.

Whereas, It is satisfactorily proven to the State Board of Health that the schoolhouse known as the New Britton Schoolhouse, situated in Hamilton County, Delaware Township, Indiana, is old, dilapidated and unsanitary; therefore it is

Ordered, That said schoolhouse is condemned as unfit for school uses and purposes, and shall not be used for school purposes after this date, October 12, 1906. And any school authority, teacher or other person or persons who shall violate this condemnation order shall be prosecuted as in the statutes provided. Any person who tears down, mutilates, disfigures or destroys this card without due authority from the State Board of Health shall be prosecuted.

Passed this day, October 12, 1906, in regular session of the Indiana State Board of Health, all members present.

Attest: Pres.
Secy.

Ordered, That the Secretary subscribe for the clippings as furnished by the United Press Association of Indianapolis at the rate of \$5 per month until January 1, 1907.

DR. T. VICTOR KEENE.

The President read the following letter:

Dr. T. Henry Davis:

Dear Sir—I hereby tender my resignation as Superintendent of the Laboratory of Hygiene, to take effect November 30, 1906, as it is my intention to re-enter the practice of medicine.

Very respectfully,

T. VICTOR KEENE.
 September 24, 1906.

After due consideration of Dr. Keene's resignation the following resolution was adopted:

Resolved, That the resignation of Dr. T. Victor Keene, as Superintendent of Laboratory of Hygiene, to take effect November 30, 1906, be accepted, and in accepting said resignation the Board wishes to convey to Dr. Keene its sincere thanks for the very competent way in which he has conducted the work of the Laboratory and that its best wishes for his success go with him in his future work.

The following letter from Lederle Antitoxin Laboratories was read:

October 5, 1906.

State Board of Health, Indianapolis, Ind.:

Gentlemen—We beg to submit the following proposition for supplying the local Boards of Health throughout the State of Indiana with diphtheria antitoxin for the free treatment of those in the State too poor to otherwise procure antitoxin. This is the same plan that is now in force in Ohio and which is working out very satisfactorily there.

We are sending you, under separate cover, by mail, a package of antitoxin as we prepare it for the Ohio State Board of Health. You will notice we have a special label for them. We enclose herewith a clinical report blank, one of which is enclosed in each package of antitoxin shipped to the Ohio State Board of Health. We propose to prepare the packages for your State Board in the same manner as we prepare those for Ohio. We will ship you a stock of the various doses required, 1,000, 2,000, 3,000, 4,000 and 5,000 units, together with memorandum sheets in triplicate similar to the set enclosed marked number one. Upon shipment of a lot of goods to any Board of Health in your State one of these blanks properly filled out should be mailed to us, another to the Board of Health, and the third copy kept for your own file. Upon receipt of this memorandum we will forward bill for the goods from this office and take care of the account in future.

It is not customary with us at the figures we quote on these goods to exchange them, but in order to promote the use of antitoxin we will permit the return to you of unused antitoxin by your local boards within a period of thirty days from its receipt. This gives the local board ample opportunity to know whether there is likelihood of the remedy being required and at the same time permits of the antitoxin being used in another locality, as during the period named its efficiency has not been affected. We enclose blanks, marked set number two. Upon receipt of any return goods from a local Board of Health you will have a set of these blanks filled out, mailing one to this office, keep one for your file, and the third send to the local Board of Health. Upon receipt of this blank we will charge your stock account with the amount of goods you have reported received from the local Board and will credit the account of the local Board with the necessary amount.

From time to time you may order from us such stock as may be required to keep your own in good condition, making a point, however, of always shipping your oldest stock first. At the end of each month a stock statement will be rendered you from this office. This will be made up of all the stock shipped you during the month, plus such as you have received from local Boards less such as our memorandums show has been shipped from your office to Boards of Health. The balance shown on this statement should agree with your stock on hand at the end of the month. This you can have checked up and return to us with your O. K.

We will supply this antitoxin to the Boards of Health throughout your State at the following prices:

1,000 units.....	\$0 75
2,000 units.....	1 25
3,000 units.....	1 75
4,000 units.....	2 25
5,000 units.....	2 75

We will pay any transportation charges on these goods to your office and also such expenses as you may have in shipping the goods to local Boards of Health. Each week or month, as you prefer, a bill of expense for transportation charges may be furnished us.

We enclose a copy of a circular which Dr. Probst used in instructing the Boards of Health in his State concerning the arrangement he had made with us. You may find some suggestions in this that you will care to make use of.

We believe that we have covered fully the plan as is at present in operation in Ohio, and should you have any suggestions which you feel will promote its better working out in your State, we shall be glad to entertain them. We believe we can have this plan in operation within a week or ten days after receiving a favorable report from your Board.

Very truly yours,

LEDERLE ANTITOXIN LABORATORIES.

By L. D. Bell, Secretary.

After consideration the Lederle letter was laid upon the table for the present.

FIRST

ANNUAL REPORT

OF THE

State Laboratory of Hygiene

Year Ending October 31, 1906.

There are two Departments:

Department of Bacteriology and Pathology.

Department of Chemistry.

REPORT
OF
The Chemical Department
LABORATORY OF HYGIENE

Year Ending October 31, 1906

H. E. BARNARD, B. Sc.,
Chief of Department of Chemistry.

H. E. BISHOP, B. Sc.,
First Assistant Chemist.

NORRIS THOMPSON,
Second Assistant Chemist.

FIRST ANNUAL REPORT OF THE WORK OF THE CHEMICAL DEPARTMENT OF THE LABOR- ATORY OF HYGIENE.

By H. E. BARNARD, B. Sc.

At the opening of the chemical department of the laboratory several fields for investigation were waiting, each one of which deserved immediate attention. The public and private water supplies of the State, hitherto unguarded and uncontrolled by other than local watchfulness, were in great need of inspection, and the food and drug laws, which had been on the statute books in one form and another for many years, and which had never been put into operation because of lack of facilities for the necessary laboratory work, were waiting enforcement. The question of pure water is primarily one of health, that of pure foods and drugs is concerned both with disease prevention and the suppression of economic fraud. The health and wealth of citizens are each equally to be safeguarded.

The chemical laboratories were, therefore, equipped for both lines of work and separate rooms fitted up, one for water and one for food and drug analysis. This division was made necessary because of the impossibility of making water analyses in a laboratory used for other work. The division of effort thus outlined has operated admirably in practice. The laboratories, though devoted to entirely different uses, are so arranged that work can be carried on in each simultaneously by the same corps of chemists.

During the year Harry E. Bishop, B. Sc., Assistant Chemist, has had charge of most of the work of the water laboratory and of the department in the absence of the chemist. He is a skilful and resourceful analyst and has filled the position with entire satisfaction. Since the first of January Norris Thompson has been on the analytical force and has done much valuable work in connection with food and drug analyses. During the summer months Jack Hinman assisted in the food laboratory, and although he was drawing no salary for his services he did much work that is to be

commended. To Mrs. E. T. Coney, clerk of the department, is due much credit for the conscientious and thorough manner in which she has performed the work of the office.

But little attempt has been made to enforce the food law through the courts. In November, 1905, several cases involving the sale of adulterated milk were presented to the Grand Jury of Clark County, but since it was impossible to prove the knowing violation of the law necessary under the present statute no indictments were returned. Milk cases were also brought in a justice's court in Terre Haute, but it was impossible to convict the defendants for similar reasons. In June of this year a number of cases were brought against dealers in meats in the city of Indianapolis who were selling products preserved with antiseptics in violation of the food laws. One case only came to trial, that of the State vs. Matzke, before the Criminal Court of Marion County. The case involved the necessity of the State proving the drug employed to be poisonous, a fact well established by elaborate investigations of the United States Department of Agriculture and physiological experts, but not easily shown except by expensive expert testimony. The jury was unable to agree as to the verdict to be rendered and no further steps have been taken to dispose of the case.

The experience gained in these few cases is sufficient to show the need of some changes in the present food law that will make it possible to punish violations by fine and imprisonment whenever such measures seem necessary to secure a proper observance of the law.

In the following report is summarized the result of a year's work. Special studies have been made of the public water supplies, private supplies, cistern and deep well waters in the water laboratory, and of many cases of foods and drugs in the food and drug laboratory.

THE PUBLIC WATER SUPPLY.

When this country was entirely agricultural, and the population widely scattered, the family water supply was of necessity the farmhouse well; but as the crossroads settlement grew to a village and with the passing years attained a city's attributes, the well became

unsafe and the supply inadequate. Water became more and more a necessity; the few gallons that sufficed for the daily needs of the early settler would no longer satisfy the householder, who must have running water in kitchen and bathroom, sewer connections and lawn sprinklers. So public water supplies were sought and built either by private capital or public funds. Many cities and towns built their own water systems and sold the service at cost to the consumer; many other supplies were constructed by companies or corporations looking for profitable investments. The service has extended until at present there are but few communities that do not have a water supply. Fire protection alone makes an adequate supply a necessity even where the water is not employed for domestic uses. With the rapid development of public water systems, there has not always been manifested the wisdom in a selection of a source of supply that is desirable. To the early settler, water was water, a fair conclusion where there could be no pollution; so it was that the first corporations building reservoirs and sinking wells consulted primarily the cost of installation and but secondarily the character of the supply. That policy did provide water-works, but as the years have passed by, one system after another has been abandoned at heavy loss and new ones constructed.

The water supply, furnishing as it does water for drinking and domestic purposes, becomes an important factor in determining the health of a community. Indeed it is the most important of all the agents which administer to healthful life. Certain diseases are largely water borne, particularly diseases of the intestinal tract, such as cholera and typhoid fever, and the quality of water supplied to perhaps 90 per cent. of a town's population, is of first importance. This is realized more and more and the consumers today refuse to drink water that a few years ago was used without the slightest fear. Whenever typhoid fever is reported in a community, the water supply, whether it be from a well or the public main, should at once be brought under suspicion. And more than that, the water supply should be investigated before fever breaks out. It is not enough to lock the stable door after the horse is stolen, though that practice is the one usually followed. Water supplies should be constantly subjected to rigid inspection. Their source should be of known purity,

and every condition surrounding the distribution of the water such that contamination is impossible. It is the province of the health boards to control the water supply of cities and towns. Their powers in this direction are almost unlimited. The so-called police powers of common law which give them the authority to protect the public health, authorize every action that may tend to prevent disease.

A prominent feature of the work of the Laboratory of Hygiene is to assist local health officers in determining the character of the local water supplies. But before satisfactory and reliable assistance can be given, a thorough knowledge of conditions is necessary, and, therefore, one of the first steps in our work was to obtain a full report of the various public supplies of the State. In order to obtain this information the following blank was sent to every health officer and superintendent of water companies:

PUBLIC WATER SUPPLY.

Town or City.....County.....
 Does your town own or operate a public water supply?.....
 Are there any private companies supplying water for public use?.....
 If so, give corporate name of such.....

 When were the works built and by whom?.....

 Is the source of supply a pond, stream, spring, or well?.....
 If from a pond, state area, average depth, kind of bottom, etc.....

 Give approximate area of watershed; wooded or cleared land; and number of inhabitants thereon.....

 Are the shores of the pond frequented by picnic parties, or occupied by summer cottages?.....

 If from a stream, give approximate volume of water flowing under normal conditions
 Does the stream receive any sewage or waste from manufacturing operations above the intake of the supply?.....
 If so, state approximate amount.....
 If from springs or wells, give depth, quantity of water flowing, character of soil, subsoil, and underlying strata, etc. Are wells bored, driven or dug?

Is the water supplied by gravity, or pumped to standpipe or reservoir?....

 If standpipe, give capacity; if reservoir, give capacity, area and depth....

 Does the supply ever develop an unpleasant odor or taste?.....
 If so, of what character?.....
 Is the supply a soft or hard water?.....
 How many miles of distributing mains are in use?.....
 What kind of pipes are used for the mains?.....
 What kind of pipes for service pipes?.....
 What is the average daily consumption in gallons?.....
 Has the water ever been analyzed? If so, by whom and when?.....

 State percentage of population using public water supply.....
 State number of families using the supply described.....
 Are there many private wells still in use within the radius reached by the
 public supply?.....

 (Signature)
 (Postoffice address).....
 (Date)
 REMARKS. (Here give any facts or information relating to the subject
 not incorporated in above answers).....

From the records obtained, the following figures concerning the public water supplies of the State of Indiana are compiled. One hundred and forty-one cities and towns are provided with water systems; 84 cities and towns own their own supply; 51 are under the control of private corporations. The ownership of six other small supplies could not be determined. Seventy-five systems are supplied with driven wells; 9 small systems employ dug wells; 7, springs; 3, flowing artesian wells over 1,200 feet deep; 29 supplies are obtained from rivers, of which the Ohio supplies 5 cities, the White River and forks 5, and the Wabash 2. All of these river supplies receive sewage in large quantities, and but three of the systems depend upon filtration to purify the water. It is evident that this unsanitary condition will eventually result in serious epidemics. Ten supplies are from lakes, Lake Michigan furnishing the water for four cities. All of these cities empty their sewage into the lake and occasionally complain that the water supply is polluted. Ninety-three of the supplies are gravity systems, while 41 are operated by direct pressure upon the mains; 56 systems have standpipes and 31 reservoirs as storage basins.

Nine of the supplies are filtered either by the slow sand filtration process or after chemical treatment. Nine of the supplies are used wholly for fire and hydrant purposes and are not used for drinking. Six of the supplies are reported as bad, one as sometimes bad, and one fair. The rest of the supplies, in the opinion of the informers, are of good quality. One thousand, seven hundred and thirty miles of distributing mains are in use; 1,711 miles of these are of cast iron and 19 miles of wood. Eight hundred and ninety-one thousand people use the water from public supplies for drinking purposes, while 1,757,000 people are wholly dependent upon private wells for their water; or two-thirds of the entire population of the State depend upon the private supply, while one-third uses public waters. A reasonable estimate allows one well to every five persons. There are, then, 351,000 wells in use in this State, the majority of which are so located as to be liable to pollution by household and by barnyard sewage.

It is of course impossible for the State Board of Health to examine all these private wells. It can, however, exercise a rigid control over the purity of the 141 public systems and as well, through the aid of local health officers, condemn annually a large number of the polluted private supplies.

Of the 141 supplies of the State which furnish the water for 891,000 inhabitants, or 33.3 per cent. of the population, we have been able to obtain information as to the sanitary character of but 41 systems. It is the desire of the Laboratory to develop eventually a system of inspection that will record at least four times a year the sanitary condition of every public water supply in the State. In no other way can the public health be safely guarded and purity of the water supply be assured.

Three factors determine the value of a water supply: First and of most importance is freedom from disease germs; second, the supply must be so abundant that it will furnish sufficient water to check the most extensive fire; and, third, it must be of a character that adapts it for use in domestic economy, such as for toilet and laundry purposes, and for industrial use in boilers and as wash-water in mechanical operations. The water which most clearly satisfies these requirements is a so-called surface water, water which falls to the ground as rain, and flowing over uninhabited areas, collects in natural basins as lakes or rivers. The

water as it reaches the earth is as pure as it is found in nature. As it flows over the surface of the ground it dissolves mineral matter from the rocks and soil and takes up organic constituents from decayed leaves and grasses. When it reaches a resting place in a natural basin, all suspended particles are gradually precipitated and the chemical action of light and air rapidly oxidizes and destroys the dissolved organic material accumulated in the rush through forests, over meadows, stony pasture lands and cultivated fields.

Surface water supplies are usually soft and palatable, and whenever properly protected against pollution furnish the safest of potable waters. The water supplied New York, Boston and Chicago is of this class.

When surface water reaches a river it flows rapidly away from its origin and is exposed to all forms of pollution. Rivers have wrongly enough been considered the sewers of industrial activities rather than arteries bearing the great necessity of life, and they are continually subject to contamination. They receive the untreated and unpurified sewage of cities, and the offal of manufacture, so that in an unpurified state, river water is no longer to be considered suitable for public supply. When no other supply is obtainable it is possible to so purify a sewage laden stream that it again becomes suitable for consumption. The process of purification removes disease germs as well, and depends upon sedimentation, filtration, nitrification and oxidation of organic matter to accomplish this. Some river waters like the Ohio and Missouri carry large quantities of silt, silica in suspension, that it is with great difficulty removed by filtration. If given time, however, the silt subsides and as it precipitates it carries down with it most of the injurious bacteria, and the water so purified again becomes suitable for use. Other waters are more advantageously treated by allowing them to flow onto beds of sand and gravel through which they slowly percolate. Gross impurities remain on the top of the filter, while organic matter, bacteria, etc., passing slowly over the surface of the grains of sand as a thin film, is subjected to the action of countless millions of so-called nitrifying bacteria and is changed from its organic to an inorganic and harmless state. The slow sand filtration system of purification is employed with much success by many cities of this country. Lawrence, Mass., was one

of the first cities to adopt the system on the heavily polluted Merimac River water. In 1890, before the installation of the filter, the typhoid death rate was 123 per 100,000; after the filtration system was placed in use there was a rapid decrease in the death rate until in 1903 it was but 33 per 100,000.

The deep well supply is very popular with many cities and water companies. Deep well waters, that is, waters that come from strata lying in or below an impervious layer of stone or clay, in this State the limestone formations, are not liable to be contaminated by sewage and are more easily obtained and distributed than surface waters which have to be brought miles from their source or purified at great expense. Deep well waters are not desirable as public supplies for several reasons. In the first place the supply is always limited. If the watershed is large or if the wells are sunk in a valley which conveys underground waters flowing off an extensive watershed, the supply may be ample. But if the watershed is not large, the supply of water underlying it will be limited, and no number of wells can obtain the necessary amount of water. It is inevitably the case that the deep well system gives out as the demand increases. Deep well waters are usually hard and frequently contain much iron. Hard waters are not desirable for domestic or laundry purposes, and when used for making steam, have to be "broken" or softened before they are suitable for use. The deep well supplies now in use in Indiana are for the most part furnishing a safe water at the present time, and some of the systems are supplied with an abundance of water. But as far as the majority of the systems are concerned, it is inevitable that sooner or later the supplies will prove inadequate.

The composition of the public waters of Indiana, as determined by analyses made during the past year, is illustrated by the following tables:

CONDITION OF PUBLIC WATER SUPPLIES IN INDIANA 1906

In all, the water from 146 public supplies has been analyzed, and of this number 74 supplies were of good quality, 43 were bad, and 29 were of such character that they were classed as doubtful. Most of the bad waters were taken from shallow or driven wells located in the public square or by the side of the street where they were exposed to all sorts of pollution. In order to better illustrate this point we have made another classification based on the source of the sample. Of the 57 deep or subsurface waters used as public supplies, 42 were entirely free from pollution, ten were classed as bad, and five were of doubtful quality. Several of the bad and most of the doubtful waters were so classed because of the high content of ammonia, chlorine, and iron present, and not because there was any evidence of pollution by sewage. Certain waters, especially from the coal and gas belt, have a high chlorine and ammonia content, which renders them undesirable for drinking or domestic use, although there is no claim that such waters are capable of producing disease. Of the shallow or surface wells but 11 could be passed as pure, while 20 were undoubtedly bad and 9 were evidently in a transition stage from good to bad. If we class these last wells as bad, a condition they will doubtless reach eventually, we find that but 11 out of the 40 shallow wells used as public supplies were above suspicion. But 6 of the 18 stream supplies were pure; 2 were undoubtedly bad and 10 were receiving sewage either directly or as the runoff from cultivated and inhabited ground. None of the 8 pond supplies were bad, although 3 were of doubtful quality. Of the 23 springs, 10 were good, 11 bad and 8 of doubtful quality. It is not probable that these bad springs were true spring supplies. They were evidently waters draining off inhabited areas and breaking out at some fault a short distance below the surface, rather than deep ground waters.

PRIVATE WATER SUPPLIES.

At least 2,000,000 citizens of Indiana are dependent upon wells for their water supply for drinking and domestic purposes. In country districts no community system is possible and in many small villages the expense of installing a public supply is as yet sufficiently prohibitive to compel the continued use of the well.

In pioneer days the first desideratum for home-making was an

abundant supply of pure water, and a flowing spring was quite as attractive to the early settler as fertile acres. When springs were not found the dug well supplied the family with an abundance of pure wholesome water. Unfortunately the conditions of early days, when pumps were not obtainable, made it advantageous to dig the well as near the kitchen door or barnyard as possible, thus saving the task of carrying water long distances by hand or with the aid of the shoulder yoke. The same wells still supply later generations, but instead of furnishing pure water, they now all too frequently are but pools of filtered sewage, the effluents of the barnyard, kitchen sink or adjacent privy, liable at any time to bring sickness to the user, or an epidemic to the community.

It is usually thought that if a well is thirty feet from a contaminating source it is safe from pollution; that if, perchance, any seepage does take place, the effluents will have been made as pure as water from the skies, in the mysterious laboratory of the earth. Such reasoning has long been proved false. If a well is freely used, so the level of the water is below that of the water in the surrounding earth, inflow will take place for a distance of one hundred feet laterally, and in the direction from which the ground water flows for a much greater distance. Hence, ordinarily a source of filth, in order to contaminate a well, must be within one hundred feet, or, in extreme cases, two hundred feet, except in the direction from which the ground water flows. But this is not the whole truth, for the original source of filth may be much farther removed and have gradually defiled the soil in the direction of the well, until it has extended within its influence. Cesspool filth has been known to seep through the soil for a distance of two hundred yards and poison wells.

In a small rural village the supply of water may have been of unexceptionable quality for an indefinite time, but as the place grows, population becomes more dense, the ground water is drawn on in excess of the supply, the drainage area of the well is increased and the water becomes less pure, both from this cause and from the increased amount of sewage returned to the soil, which is sure to be saturated with organic matter beyond its power of oxidation, and pollution of the wells is inevitable.

During the past year we have made a large number of analyses of water from private wells. In many cases the samples were not

submitted for analyses until illness, usually typhoid fever, aroused the family, or more frequently the family physician, to question the purity of the supply. The blind faith in the purity of well water, especially when it has been used by several generations of the same family, is one of the chief reasons why typhoid fever so constantly ravages country districts. The honor of the family well is held as inviolate as the honor of the family name, and any hint or suggestion of possible impurity is met with a laugh of scorn. We have heard time and again the statement, "My well water is the best in the county or State," and have found by analysis that it was but little better than raw sewage; clear and cool perhaps, but nevertheless reeking with the putrefactive bacteria of the privy vault and filthy hogpen.

The condition of the private well is best illustrated by graphic representation, and the following charts indicate clearly the results of a year's work and as well hint what will have to be done before the character of the water used by the country householder is as good as that supplied the residents of cities and towns where public water systems are in use.

If these charts are summarized we find that 492 private well waters have been analyzed, of which 236 were pure, 202 bad and 54 of doubtful quality. If we class the doubtful waters as bad, since they will eventually reach this condition, we see that 256, or 52 per cent., of the private well supplies are of such quality as to be unsuitable for drinking and domestic use. If this figure holds good throughout the State we can readily see why the typhoid returns from the country districts are always high. Making another classification based on the source of the waters, we find that of 150 deep well waters analyzed but 25 were bad, while 111 were of good quality. The deep well is evidently a satisfactory private supply if it is derived from true second water. Of 342 shallow wells, 177 were undoubtedly bad, 125 were good and 40 were of doubtful quality. It is not surprising that many wells are polluted, because the universal custom of grouping the house, barn and water supply within easy reach of each other has made the well the center of drainage area for all household sewage and farmyard waste. Great numbers of these old wells are still in common use, and, save where analysis has proven the water to be a filtered sewage, of good repute in the community. The impor-

CONDITION OF PRIVATE WATER SUPPLIES IN INDIANA

1906

tance of an analysis of these well waters can not be over estimated. In some towns where public sentiment has been aroused, a series of analyses has shown that hardly a single well in the thickly settled village was suitable for use, because of the presence of sewage effluents. Where such conditions exist, and our results convince us that they are by no means uncommon, a water supply brought from some uncontaminated source becomes a public necessity.

THE CHEMICAL ANALYSES OF SOME SO-CALLED CISTERN WATERS.

When suitable ground or surface water is not obtainable the collection and storage of rain water is resorted to. In some parts of the world no other water is used for drinking purposes. This has been the case in the city of New Orleans until continually recurring epidemics of yellow fever spread by mosquitoes bred in cisterns and water tanks forced the introduction of a municipal water supply. Indiana has an abundance of both ground and surface waters, but, since in some cases the water is not suitable for use and more particularly because of the adaptability of rain water to domestic and laundry purposes, cisterns are common in all parts of the State. Cistern water is rain water collected from a flat surface, usually a roof, and stored in vaults, generally underground but sometimes built in cellars. The character of the water is entirely dependent on the condition of the roof which is washed by the rains and the suitability of the storage reservoir. The roof of a house, exposed as it is to the dust from the streets, excrement from birds, fallen leaves and mossy growths, is not an attractive nor sanitary place from which to collect drinking water, and the gutters and down pipes should be so arranged that the first water which falls is not allowed to flow into the cistern. After the roof is well cleansed the subsequent rainfall may reach the cistern in a fair degree of purity.

A question of first importance in considering a rain water supply is the material out of which the walls of the storage cistern are to be made. Slate and stone are the most suitable materials but are not often available except for small cisterns. Brick walled cisterns lined with cement are by far the most

common, and though the hardness of the water is somewhat increased by the solubility of the lime salts in the cement, they are easily built and at low cost and if properly constructed, well adapted for the purpose. Tanks of wood make good cisterns provided they are kept full, but if there is fluctuation in the water level, organic development will occur and impart a disagreeable taste and odor to the water. Cement or concrete cisterns are rapidly coming into use and, aside from increasing its hardness, do not injure the quality of the water. Cisterns so constructed are very desirable and are to be preferred above all other kinds where a large volume of water is to be stored. One form of cistern that is frequently built has a partition wall across it making a chamber that is filled with charcoal or other filtering material. When new this construction furnishes a water with a less pronounced "cistern" taste than is obtainable from the ordinary form. This arrangement is not desirable because the water is simply strained, never purified, and the filter or retaining basin rapidly becomes filled with filth that can not be readily removed. The suitable location of the cistern is of first importance in determining the quality of the water it furnishes. Frequently it is in the back yard, exposed to drainage and seepage from garbage piles, accumulated filth and open privy vaults. During the past year we have analyzed the water from 27 cistern supplies. Of the entire number we found but 13 that could be classed as potable; in all the other cases the cisterns had evidently received water from the surrounding ground as well as from the roof. Several samples, notably numbers 56, 294 and 396 (see p. 149), were nothing but sewage effluents, and were dangerous waters for use.

A good cistern water should be soft, free from sediment and vegetable growths, and its chemical composition should be practically that of rain water. It should be free from chlorine and nitrates and low in solids. The following tables show the composition of some of the cistern waters analyzed during the past year and are sufficient condemnation of the average cistern supply as a source of water for drinking and domestic purposes.

THE INTERPRETATION OF WATER ANALYSES.

The problems of the water analyst are many and varied. Every new sample submitted for examination brings with it its own peculiar conditions, and must be considered, not in relation to other analyses, but as an original study. The evidences of the mound builders are passed unnoticed by the casual observer, and an up-turned flint bears no story, but the skilled eye and trained knowledge of the patient student gives to each a meaning that reveals the history of prehistoric days. Water, like clay and stone, bears evidence of its previous history no less intelligible to him who can read the records. To a chemist each determination in the course of a water analysis has its value, and the sum of these, when added to a knowledge of surroundings, reveals the purity or the pollution of the water, conditions which are so often falsely interpreted.

In the course of our work we are frequently asked to explain the results of our analyses and to tell why, in the case of two analyses apparently similar, we have classed one supply as pure and condemned the other as polluted. We also meet with prejudiced opinion, born of a mistrust of the chemist's ability to judge of a water's purity, a condition of mind unfortunately too often the result of experience with some dabbler with test tubes who made snap judgments based upon imperfect analyses of unsuitable samples, or again with men who believe that the less an analyst knows about the sample at hand the more free from prejudice will be his opinion concerning it. We even more frequently suffer because of that admiration for chemical knowledge and belief in chemical clairvoyance which expects us to decide from a sample, while you wait, if a certain water caused the death of a person a year since, in a distant town, under unknown conditions, a mark of appreciation very trying to a man who knows his own limitations. Hardly a day passes but we receive from some anxious person or a physician who should be better informed, a vest pocket sample of water or a perfume bottle containing traces of its original contents, whisky flasks, catchup bottles, piccalilli jars, marked sample 1 and sample 2, and a request for immediate examination. With a view to dispelling some of these illusions and placing the

work of the water laboratory more clearly before its patrons it will be well to discuss in untechnical phrases just what is meant by water analysis and the conditions that make it necessary.

The correct interpretation of analytical results requires a knowledge of the source of a water, its surroundings, geological horizon and past history. Every water has its own characteristics. The presence of any given element of its composition is interpreted according to the kind of water under consideration. Spring water is, of course, colorless; river water of equal purity is probably colored and turbid; pond water may contain considerable amounts of organic vegetable matter without becoming unusable, which, if present in a well water would place it in the polluted class. Deep well water normally may contain large amounts of chlorine, while an equal amount in a surface or dug well would be a mark of sewage pollution.

In the examination of a water we classify the substances found in it as mineral and organic. This distinction is not altogether a permanent one, for the mineral and organic conditions are dependent on one another, and in part pass into each other. The mineral constituents are usually potash, soda, lime, magnesia, iron and alumina, in combination with chlorine and sulphuric, silicic, nitric and carbonic acids. The organic constituents are, first, living organisms—animal and vegetable; second, the products of organic life, such as albumen, urea, tissue, etc.; third, products of the decomposition of organic matter.

The ordinary methods of analysis determine the form and amount of these constituents at the time the water is analyzed. It is usually not necessary to determine the mineral constituents, but only those factors which are influenced by the presence of sewage or contaminating material. Sewage is very rich in organic matter, chlorine and solids, and so a determination of these components will give us the information we desire. The organic matter contains large amounts of nitrogen, which analytical processes enable us to determine with great accuracy in four forms, namely, as organic nitrogen, as ammonia, as nitrous acid and as nitric acid. This order represents the order of change from organic nitrogen to its most highly oxidized condition. If we find ammonia present in the last form, that is, as nitric acid, we know that

whatever organic matter was present has been oxidized or destroyed, and the source of danger removed; but if we find much ammonia or nitrous acid present we see that oxidation is not complete, a proof that the source of pollution is not far from the supply, and therefore the water must be regarded as unwholesome.

It must be understood that the various constituents determined in a water analysis are not of themselves injurious; they are but indexes of pollution, and the factors found are valuable only as they are comparable with factors predetermined on a water of known purity of the same class. That this important fact may be perfectly understood, below are given detailed analyses of both good and bad waters of several classes:

SPRING WATERS.

	POTABLE.	POLLUTED.
Odor	Slight vegetable.	None.
Color	0.0	0.0
Turbidity	Slight.	Very slight.
Sediment	White flocculent.	Very slight.
Free ammonia	.0010	.0046
Albuminoid ammonia	.0014	.0260
Nitrates	.0500	2.4000
Nitrites	.0001	.0003
Chlorine	.3000	5.0000
Total solids	30.00	35.00
Fixed solids	25.40	31.20
Hardness	13.80	13.80
Iron	.0000	.0000

DEEP WELL WATERS.

	POTABLE.	POLLUTED.
Odor	None.	None.
Color	10.00	0.0
Turbidity	None.	Very slight.
Sediment	None.	Much red.
Free ammonia	.0056	.0310
Albuminoid ammonia	.0000	.0048
Nitrates	.0000	1.0000
Nitrites	.0001	.0040
Chlorine	.2000	8.5000
Total solids	37.60	131.80
Fixed solids	32.50	104.60
Hardness	11.80	27.20
Iron	.0440	.0400

DUG WELL WATERS.

	POTABLE.	POLLUTED.
Odor	None.	None.
Color	0.0	0.0
Turbidity	Slight	Slight.
Sediment	Much red.	None.
Free ammonia	.0010	.0030
Albuminoid ammonia	.0000	.0560
Nitrates	.0100	.0300
Nitrites	.0000	.0800
Chlorine	.2000	12.8000
Total solids	35.00	98.10
Fixed solids	31.40	75.50
Hardness	15.50	22.50
Iron	.0500	.0000

CISTERN WATERS.

	POTABLE.	POLLUTED.
Odor	Vegetable.	None.
Color	5.0	5.0
Turbidity	Very slight.	None.
Sediment	None.	Very slight.
Free ammonia	.0060	.0050
Albuminoid ammonia	.0100	.0126
Nitrates	.0000	.1200
Nitrites	.0000	.0020
Chlorine	.1000	3.5000
Total solids	2.60	54.00
Fixed solids	1.10	45.00
Hardness	1.00	9.40
Iron	.0000	.0000

In every analysis given above the polluted samples were of better appearance than the pure waters, and when subjected to ordinary physical examination would have been accepted as pure. The high ammonia, nitrate, nitrite and chlorine factors obtained showed that on the contrary the supplies were heavily polluted with sewage and absolutely unfit for drinking or domestic use.

Bacteriological examinations, that is, the determination of the number and kind of bacteria present in water, are necessary in many cases, but a single bacterial analysis is so subject to experimental error that the results obtained are of small value. For the purpose of judging the efficiency of filter beds and water purification systems, bacterial tests are most valuable; the filtered water may be changed but little from raw water so far as chemical analysis can determine, and yet bacterial tests may show that a source of danger is largely or entirely removed. Clark and Gage say:*

"In the examination of samples of spring water collected in the

*Am. Pub. Health Ann. Report, Vol. xxix.

proper manner the degree of purity is shown almost absolutely by chemical analysis. The complete analyses of samples from a large number of domestic wells show that polluted waters that might become unfit for consumption at any moment are more plainly indicated by a single chemical analysis than by a single determination of *B. Coli*. The presence of *B. Coli* at the time of examination may indicate actual danger to health, and its absence even in the most polluted of these waters, chemically, may indicate lack of imminent danger, but the chemical analyses are certainly the most decisive."

Water analyses are desirable whenever the supply is subjected to probable pollution because of unfavorable location, or when sickness occurs of a type usually communicated in a water supply. We receive many samples for analysis collected from sources known to be polluted. Such examinations are unnecessary. It does not need extensive chemical analyses and a dozen plate cultures to prove the presence of filth in a stream that is used as a sewer for a city, nor is it necessary to waste time over the water from a dug well that by reason of its location must be a cesspool for household wastes or barnyard washings.

The Public Water Supply of the State of Indiana

BY

H. E. BARNARD, B. Sc.

WATER SUPPLY OF INDIANA.

ADAMS COUNTY.

Berne.—No public supply. Water is obtained from private wells and cisterns. The town is located directly on the Mississippi and St. Lawrence watershed.

Geneva.—This town is supplied for the most part by private wells. Most of the wells are driven; two or three open wells. A few cisterns are in use.

ALLEN COUNTY.

Fort Wayne.—This city has its own water supply, built in 1879. The water comes from wells bored 60 to 150 feet through soil, gravel, sand, blue clay, hardpan into rock. It is pumped into a reservoir that has a capacity of 3,000,000 gallons. The water is hard and at times has a metallic taste. There are 100 miles of distributing mains in use, and the service pipes are lead. About 3,500,000 gallons are used daily by about 90 per cent. of the population. There are about 10,000 taps.

Monroeville.—Water supply is from private wells.

BARTHOLOMEW COUNTY.

Columbus.—The water system is owned by the city and was built in 1870. The water is taken from East Fork of White River just below the junction of Flat Rock and Driftwood Fork. The water is obtained from a gallery well which extends diagonally across the river. Sewage enters the river a short distance below the intake of the water supply. The supply is insufficient and must soon be increased. The water is moderately hard and flows through twenty miles of cast iron mains. The service pipes are of wrought iron. There are about 2,500,000 gallons used daily by about 890 families. Very few families use the water for drinking or domestic purposes, getting the water for that purpose from private wells.

Elizabethtown.—The supply of this town is from both dug and bored wells, depth from 30 to 100 feet, through substrata, gravel and limestone. There are three deep public wells. Hard.

Hartsville.—Six public wells. The water is hard. Nearly half the families have private wells, some of which are dug and some drilled, the wells being from 18 to 100 feet deep.

Hope.—Private wells and cisterns. Most of the wells are drilled.

Jonesville.—From private wells, driven 18 to 24 feet deep; free flow. Soil is sandy loam, subsoil is sand so deep it is not known what the character of the underlying strata is.

BENTON COUNTY.

Boswell.—Two town wells, the rest private. About ten persons use the water from the town wells. Wells are driven from 50 to 220 feet. One of the town wells is shallow.

Earl Park.—No public supply. Private wells nearly all deep and bored to an average of 100 feet.

Fowler.—The Fowler Utilities Co. was built about 1895 by the Seckner Contracting Co., for the town of Fowler, but is now under private control. The supply is from four driven wells, two 600 feet deep, and two 200 feet. The water is pumped to a standpipe with a capacity of 1,000,000 gallons, and 75,000 gallons per day are pumped. The wells are driven through black loam soil, clay subsoil, rock and gravel at a depth of 100 feet and so on down. The water flows through five miles of cast iron mains into galvanized iron service pipes. About 98 per cent. of the people, or 400 families, use the water. The water is considered pure, although it contains a large per cent. of iron. Practically no wells in the town.

Otterbein.—Private wells about 40 feet deep, extending into the gravel.

Oxford.—Town owns the lease of the public supply, which consists of three driven wells 143, 159 and 175 feet deep, driven into gravel. It is supplied by gravity. There are $3\frac{1}{4}$ miles of cast iron distributing pipe and the service pipe is galvanized iron. About one-sixth of the population, or 153 families, use the water.

BLACKFORD COUNTY.

Hartford City.—Hartford City owns its own public water supply, which was built in 1894, and consists of seven driven wells 260 feet deep. This water is pumped into a reservoir with a capacity of 385,000 gallons and then goes through 17 miles of cast iron mains. Lead and galvanized iron service pipes are used. There are 950 service lines, but there are several families on some of these lines. The daily consumption is about 400,000 gallons and about 65 per cent. of the people use the water. The water is hard.

Montpelier.—The Montpelier Light and Water Co. supply the water for this city. Their plant was rebuilt in 1905 by the above named company. Their supply consists of deep wells and a spring in old quarry basin of approximately one-half acre in area. The wells average 200 feet in depth in rock, and are drilled. The water is pumped through about six miles of cast iron distributing mains. The service pipes are lead and galvanized iron. One-half million gallons consumed daily. About 75 per cent. of the population, or 200 families, use the water. There are also private wells in use.

BOONE COUNTY.

Jamestown.—The water of this town is apparently pure. The supply is from driven wells owned by the different families, and ranging in depth from 40 to 120 feet.

Lebanon.—The water supply of this town was built in 1894 by Bynum, Brenton & Fall. The supply is from wells; one is 42 feet deep, another 230, another 90. They are driven through black loam, subsoil, stiff clay, blue clay into gravel. The watershed is wooded and cleared land. The water is pumped to a standpipe holding 189,000 gallons. The water is hard and when heated gives off the odor of decayed leaves. There are 15½ miles of cast iron mains. The service pipes are lead. About 65 per cent. of the population use 300,000 gallons a day, and there are 900 taps in use.

Thorntown.—No public water supply. Private dug and driven wells.

Zionsville.—No public supply.

BROWN COUNTY.

Nashville.—The water supply is altogether from wells, mostly dug, although there are quite a number of driven wells. The soil is sandy, with a gravel subsoil and underlying strata of clay.

CARROLL COUNTY.

Delphi.—The city purchased their supply in 1902. It comes from three springs flowing from gravel, underlying strata and blue clay. The water runs to the reservoir by gravity and from there is pumped to the standpipe, which holds 27,000 gallons. The reservoir is 60 feet in diameter and 14 feet deep, with a capacity of 350,000 gallons. There are $4\frac{2}{3}$ miles of mains. Wooden pipes are used to reservoir and the rest are iron, with lead and iron service pipes. Four hundred and twenty-five families, or about 85 per cent., used about 250,000 gallons daily. The water has been analyzed.

Flora.—Springs and wells furnish the water supply. Some wells are driven, and these go through black subsoil, blue clay and into hardpan just before striking water.

CASS COUNTY.

Logansport.—Logansport owns its own water supply, which was built in 1875. The water comes from Eel River. This stream averages about five feet in depth and 250 feet wide. There are several picnic grounds above the city and along this stream, and also a park just at the city limits. The water is pumped into iron mains, and lead and iron pipes are used for service pipes. The water is soft and is muddy. About one-half of the people use this water, the rest getting their supply from private wells. The city water is considered to be badly polluted.

CLARK COUNTY.

Charlestown.—The water supply in Charlestown is from private wells, two springs and private cisterns. The water is clear, ample and is considered pure.

Clarksville.—Supply from driven and dug wells.

CHEMICAL ANALYSIS OF WATER FROM SYSTEM OF LOGANSPOUT PUBLIC SUPPLY.

Jeffersonville.—The Jeffersonville Water Supply Co. furnishes the water for this city. This was built in 1887 by S. R. Bullock & Co., and the water is taken from the Ohio River. The water receives a large amount of sewage or waste, mostly from a distance, the nearest point being the city of Madison, 50 miles above. A standpipe 15 feet in diameter and 150 feet in height has the water pumped into it. The water is soft. There are 12 miles of cast iron mains, galvanized iron being used for the service pipes. Twenty-five per cent., or 600 families, use daily about 1,000,000 gallons. The Water Company is installing a water supply system from driven wells, the quality of which is excellent.

Sellersburg.—Wells and cisterns furnish the supply for Sellersburg. Some of the wells are from 12 to 35 feet in depth, and are through clay, subsoil, slate, cement rock and limestone. Some few wells pass into sand and gravel. Much of the water is of inferior quality, and little else than surface water.

CLAY COUNTY.

Brazil.—This city owns a public water supply of drilled wells, but when there is a fire the water has to be pumped from a mud pond. The inhabitants on the watershed number about 1,000, and the land is cleared. The water is hard and is pumped direct in cast iron mains, with lead and iron service pipes. About 500,000 gallons are used daily, but is not used for domestic purposes except after boiling, as most of the drinking water is obtained from private wells. The city is putting in more drilled wells and expects soon to have sufficient water from this source to serve all purposes.

Bowling Green.—Supply from dug wells.

Carbon.—Supply is from wells. Water is of good quality.

Center Point.—Water supply from wells driven and dug; depth from 16 to 60 feet through soil, yellow clay $1\frac{1}{2}$ to 2 feet, subsoil, white clay, blue clay, black jack, slate and coal. The water at times has a mineral, sulphur, sweetish and vegetable taste and is very hard as a rule. The supply is not the best in the shallow wells.

Clay City.—Families have own wells, dug through clay and subsoil with an underlying strata of rock and coal.

Staunton.—The water used in Staunton is from private wells usually about 17 feet deep. Probably 80 per cent. of these wells go dry one or more times a year. Water is good when supply is plentiful.

CLINTON COUNTY.

Colfax.—All private wells. Some are driven, and range from 27 feet to more than 100 feet deep. Dug wells are different depths, some not more than 12 feet.

Frankfort.—The Frankfort Water Works Co. supplies this city with water from driven wells. The wells are 85 feet in depth, through 20 feet of an impervious blue clay into a gravel strata from which water is taken at 30 feet. The reservoir is 20 feet deep and covered and is filled by direct pressure. Capacity 300,000 gallons. The water is hard and about five years ago became unpleasant to taste or smell. There are 16 miles of mains of wrought iron laid and lined with cement, and the service pipes are galvanized iron. There are 1,650 connections with mains, and 75 per cent. of the people use this water. The daily consumption is about 1,000,000 gallons.

Kirklin.—No water supply but private wells.

Michigantown.—Private wells bored, driven or dug from 10 to 50 feet deep.

Rossville.—Both dug and driven private wells furnish this water supply. The greatest menace to health is a number of false wells dug in the bottom of cellars for purpose of drainage. Many of them reach down to the strata of sand from which the private wells get their water.

CRAWFORD COUNTY.

Alton.—Cistern water used altogether. Sometimes during a drouth or low water, water from the Ohio River is used.

English.—The English Water Company which was built in 1895 by W. L. Luckett and Jno. V. McCoy, furnishes the supply for this town. The water comes from three springs with a capacity of 1,000 barrels a day. There is one mile area of wooded watershed, about 1,000 inhabitants living thereon. The water is supplied by gravity, and there are four miles of iron mains

in use. Galvanized iron is used for the service pipes. About 1,500 gallons per day are used by six hundred families, or 100 per cent. of the population.

Leavenworth.—The water for this town is supplied by the Leavenworth Water Co. from bored well, pumped into a reservoir, size 60x80x10. This plant was established in 1896. The well is 77 feet deep through sand and gravel. There is a bad taste occasionally caused by decayed leaves that have blown in the reservoir. There are 7,140 feet of cast iron mains and galvanized iron service pipes; 2,700 gallons are used daily, and 10 per cent., or about 16 families, use the water. There are also two public wells and quite a number of private wells and cisterns.

Marengo.—Grant & Davis Water Co. supply this town. The company was established in 1904. The supply is from a spring in limestone, with a capacity of 5,000 to 10,000 gallons per hour. Water is pumped into closed reservoir that holds 1,200 barrels in form of cistern. The water is hard. Cast iron is used for the mile and a half of mains, and gaspipes, usually black, are used for service pipes. Fifty families, or 30 per cent., use the water, and about 6,000 gallons daily is consumed. There are also private wells.

Milltown.—Private wells and cisterns supply this town. Dug wells run 30 feet in depth and bored wells run 200 feet through soil, lime and clay, subsoil soapstone, under this sand, gravel and deeper limestone rock.

DAVIESS COUNTY.

Elnora.—The only public water supply in this town is from three driven wells on the streets, and this is supposed to be pure and wholesome. Private wells are generally driven, and have an average depth of about 15 feet. Soil and subsoil is sandy, and underlying strata is gravel. The water is hard.

Montgomery.—There are two public wells 20 to 25 feet in depth. As this is very shallow there is no way of accounting for the lack of typhoid fever. One well most used is within three feet of an uncemented street drainage pipe. The private wells are dug from 15 to 40 feet deep, but generally they are 20 to 25 feet. Supply is small and is almost entirely exhausted during dry weather. The soil is clay. The entire corporation of Montgomery

is a watershed drainage north, south, east and west. There are 700 inhabitants on this cleared land, and 25 per cent. of the population use the water from the public wells in dry weather.

Odon.—Odon is built in a slight depression between two areas of upland, each several miles in extent. There is no public water supply. The private wells are dug from 12 to 20 feet in depth. Some wells in the lower part of town are contaminated with surface water in wet weather, which causes a bad taste. The water is both hard and soft.

Washington.—The City Water Co., established in 1887 by C. E. Gray, supplies the water for this town. The supply is pumped from a stream to the standpipe, which holds 240,000 gallons of water. The water sometimes becomes muddy and has a bad odor and taste. Ten miles of iron distributing mains are in use, with service pipes of the same material. About 400 families use the water and the average daily consumption is 1,500,000 gallons. A new filter is being put in.

DEARBORN COUNTY.

Aurora.—The City of Aurora Water Co., a private company which in 1904 had the Phoenix Construction Co., of Chicago, build their plant, furnishes this city with their water supply. The water is pumped from the Ohio River into a reservoir holding 280,000 gallons. No sewage or waste above the intake nearer than Cincinnati, which is 28 miles above Aurora. The water is purified by the N. Y. Continental Jewell Filtration Co.'s system. The water is soft and flows through 8 miles of 10-inch cast iron distributing mains. Galvanized iron is used for the service pipes. About 200 families are now using the water at the rate of about 150,000 gallons per day. This system was completed during the past year.

Lawrenceburg.—The supply for this town is from driven public wells ranging in depth from 40 to 70 feet, private wells and cisterns. The water is supposed to come from the Great Miami River.

Moore's Hill.—No public supply. Private wells are dug from 20 to 35 feet deep. Water is from 8 to 15 feet deep. The soil is clay with limestone strata. During dry falls the water in the wells gets very low.

DECATUR COUNTY.

Greensburg.—A private concern called the Greensburg Water Co., supplies Greensburg with its water. This was established in 1889 by the Ludlow Valve Manufacturing Co. The supply is from bored wells going through yellow clay and limestone into rock. The water is pumped direct. There are about 14 miles of cast iron mains with galvanized iron service pipes, which supply about 400,000 gallons of water per day. About 500 families, or 40 per cent., use this water. There are also private wells in use.

Millhausen.—Supply from private dug wells. They range from 24 to 40 feet in depth. Water first class.

Westport.—Bored and dug wells, and cisterns supply Westport with water.

DEKALB COUNTY.

Auburn.—In 1898 the Arbuckle-Ryan Co., of Toledo, Ohio, built the water-works for the city of Auburn. The water comes from five 10-inch drilled wells 94, 224, 234, 238, 242 feet deep with a pumping capacity of 1,000,000 gallons every 24 hours. The water is pumped direct into the mains, of which there are $9\frac{1}{2}$ miles of cast iron pipe. The service pipes are lead and galvanized iron. About 600,000 gallons daily are consumed by 50 per cent. of the population, or 460 families. There are also private wells.

Garrett.—In 1896 the City of Garrett built its own water plant and gets its water supply from bored wells. These wells are bored 150 feet through blue clay into gravel, and the water is pumped direct into the mains. About eight miles of mains are used in distributing the water, and the service pipes are of galvanized iron and lead. There are about 500 families using the water, or 90 per cent., and the average daily consumption is 600,000 gallons.

St. Joe.—No public supply.

Waterloo.—The Waterloo Water & Light Co. was built in 1902 by the Olds Construction Co., of Ft. Wayne. This plant furnishes the water supply for the city. The wells are drilled 768 feet in depth, the water is pumped in a reservoir with a capacity of 105,000 gallons, and 8,500 feet of mains are used, made of cast

iron with galvanized iron service pipes. About 20,000 gallons are used per day, but only a few of the people use the water, about 20 families, or 1 per cent. of the population.

DELAWARE COUNTY.

Albany.—Six years ago the Albany Water & Light Co., using a system of drilled wells, began supplying the city of Albany with water. The wells are drilled 165 feet, and the water is supplied by direct pressure. About five miles of cast iron pipe distribute the water. The service pipes are of cast iron, and 75 per cent. of the population use this supply.

Eaton.—About a dozen families in Eaton are supplied with water piped from a deep well. This water is pumped into an elevated tank by a gas engine. Private wells supply the rest of the town.

Muncie.—Muncie is supplied with water by the Muncie Water Works Co., a private concern. The water is taken from deep wells and White River and Buck Creek. The watershed of Buck Creek is 15 square miles. In the summer there are frequently picnic parties along White River above the intake. Each stream at point of intake has an inflow of 5,000,000 gallons daily. There is no waste or sewage received in the stream other than that from the oil wells, and that is equal to 15 per cent. of the flow of the stream at low water. The wells are drilled about 100 feet and the supply comes from rock. The water is pumped direct into the mains, which are of cast iron. Wrought iron and lead are used for the service pipes. The water from White River has an unpleasant taste of salt and oil. About 3,500,000 gallons are used daily. An auxiliary pump house has now been erected on Buck Creek and line run to filter plant at main pumping station to deliver water to filter, from which it is pumped to consumers.

Selma.—All private wells. About half of them range in depth from 65 to 125 feet, and the rest of them from 20 to 40 feet. A few cisterns are used for supplying the drinking water.

DUBOIS COUNTY.

Birdseye.—Private wells and cisterns supply this town.

Huntingburg.—In 1893 Huntingburg established a public water supply. The water is obtained from a pond covering 20 acres, and

6 feet deep, with a mud bottom. The watershed is about 500 acres in extent, and is partly wooded and partly cleared, with about 20 inhabitants thereon. The water is pumped from the pond into a standpipe that has a capacity of 125,000 gallons. At times the water develops an unpleasant odor and taste as of decaying vegetable matter. This water is soft. Four and one-half miles of mains are used, and these are made of iron with galvanized iron service pipes, 166,664 gallons of water being used daily, and about 600 families, or 75 per cent., use the water. The city is building a new pond or lake in addition to the present one, which will have an average depth of 20 feet, and cover from 40 to 50 acres. The watershed will be the same as the old pond, the new one being immediately below the old. The old pond will be used as a catch basin.

Jasper.—The town of Jasper built its water supply about 10 years ago and uses the water from the Patoka river. The water is pumped into a reservoir, and from there flows through about four or five miles of distributing mains or iron. One thousand families use this supply. The water is soft. In the spring the water is not clear, but otherwise is fine water. There are two reservoirs in Jasper, but only one is in use.

ELKHART COUNTY.

Bristol.—There is no public supply in Bristol.

Elkhart.—The Elkhart Water Company, a corporation mainly owned by Chicago capitalists, was built in 1884. This supply consists of five dug wells 34 feet in depth, in gravel mostly. The water is medium soft and gets yellow after a fire. The mains are of iron and the service pipes lead. About two-thirds of the population use the water.

Goshen.—In 1880 the city of Goshen built a public supply. There are two open wells 40 feet in diameter and 35 feet deep, with a sand bottom, and this water is pumped to a standpipe. The water has an iron taste. About 27 miles of distributing iron mains with iron and lead service pipes are in use. About 3,000,000 gallons are consumed daily. Probably only 100 families use the water, as wells are plentiful and that water is used. The public supply is good.

Nappanee.—This town owns a bored well 160 feet deep. The water is pumped into a tank 20 feet in diameter and 24 feet deep, with a capacity of 75,000 gallons; from this the water flows through six miles of iron mains. Very often an unpleasant odor and taste develops. About 300 families, or 50 per cent. of the people, use the water, and there are 200,000 gallons used daily. There are also many private wells in use.

Middlebury.—There is no regular public water system in this town. There are three wells from which six or eight families get their water, but the majority of the people have their own wells. Some of these wells are driven, a few are drilled, and there are still a few open wells in use.

Millersburg.—Every one in this town owns their own well, most of them being the tubular wells. There may be a very few open wells still in use. The wells go through sand and clay loam one foot, yellow clay two feet to eight feet, sand and gravel 10 to 20 feet, and water is reached 12 to 20 feet from the surface.

FAYETTE COUNTY.

Connersville.—In 1869 the city of Connersville had a public water system built by the Holly Water Works Co., of Massachusetts. This water comes through a hydraulic canal which is fed by the west fork of Whitewater river and is pumped from the canal into the city mains. The watershed consists of 250,000 acres, partly wooded, partly cleared and having about 6,000 inhabitants thereon. The flow of the stream is about 5,000,000 gallons daily. The water at times develops an odor of decaying mosses and grasses and is soft. Fifteen to eighteen miles of distributing mains are in use. These are of iron, with lead and iron service pipes. The supply is ample for fire purposes, but is not good for drinking purposes, and nearly all the people use well water for domestic supply. About 1,000,000 gallons per day of the city water is used.

FLOYD COUNTY.

Georgetown.—Four dug wells supply this town with its water. These wells are 43 feet, 41 feet, 37 feet and 28 feet deep and are all seep wells. One of them develops a sulphur odor and taste at

times. The water is hard. One of these wells fills up by an underground supply about 10 feet from the top at every large rain. About 50 per cent. of the population use this supply.

FOUNTAIN COUNTY.

Attica.—In 1889 Attica rebuilt her public water supply. The supply is from bored wells 100 feet deep and bored through loam, gravel, water, clay, hard pan, into the gravel and sand containing the water used. This water is pumped to a covered reservoir 200 feet above pump, which has a capacity of 500,000 gallons. The flow of the water is 1,000,000 gallons per 24 hours. There are six or seven miles of cast iron mains in use, with galvanized iron service pipes, and 600 families or about 98 per cent. of the population use the water, the average daily consumption being 275,000. There are but few private wells in use.

Covington.—The Covington Light and Water Co. built in 1893 and owned by a corporation, furnishes the water in this town. There are two springs which are fed by large streams of water. The springs are about 15 feet deep and 18 or 20 feet square. The water is pumped to a standpipe about 100 feet high and about 16 feet in diameter. There are eight or ten miles of cast iron mains. The service pipes are white metal. About 50,000 gallons per day are used, and about 80 per cent. of the people use the water. The water has been analyzed several times and has always been found to be a pure supply.

Hillsboro.—Private wells, which are driven from 70 to 85 feet deep furnish the water supply at this place.

Veedersburg.—The town of Veedersburg owns a system of two bored wells which was built in 1898. These wells are 36 feet deep, going through sandy soil, gravel, subsoil, while the underlying strata is shale, and 65,000 gallons of water are used each day. The water is pumped to a standpipe holding 90,000 gallons, from which the water flows through two and one-half miles of cast iron mains. Service pipes are of galvanized iron. About 33 per cent. of the inhabitants use this supply. The area of the watershed is eight acres, with about 25 inhabitants thereon.

Wallace.—No public system. Private wells dug from 22 to 40 feet and natural springs supply the water. Town is well drained by natural waterway.

FRANKLIN COUNTY.

Brookville.—Brookville owns its own public water supply. It was built in 1891 by Thomas Hardman and the water comes from a stream. It is pumped to a reservoir. At times it becomes muddy and fishy, but in winter is clear and good. Four-inch, 8-inch and 10-inch cast iron mains are used, with galvanized iron for service pipes. Seventy-five per cent. of the families use the water, but it is not used for cooking. All the people use cistern water for drinking and domestic purposes.

Laurel.—There are several town wells in Laurel, and these with private wells furnish the supply. Most of the wells are driven, going through gravel and alluvial deposit. In the main part of town water is found at a depth of 21 feet, and in the upper part of town at 30 to 40 feet. One dug well which belongs to the town is 48 feet deep. The dug well in the main part of town is the one mostly used. Both these wells are sealed with cement.

Mt. Carmel.—No public supply.

Oldenburg.—No public supply.

FULTON COUNTY.

Kewanna.—Supply for Kewanna is from private wells from 65 to 90 feet deep. Water hard, containing much lime.

Rochester.—In 1893 the town of Rochester built its public water supply. The water is taken from a lake three and one-half miles square. It is about 20 feet deep, with muck and sand bottom, and is fed by springs and Mill creek. The watershed consists of seven square miles of cleared land and about three square miles of wooded land, with 200 inhabitants living thereon. There are many picnic parties along the shore of the lake. The water is pumped to a standpipe that holds 105,000 gallons. The water has an unpleasant odor, like steam from heated, stale rain water, and is very soft. Ten miles of iron mains are in use and the service pipes are of lead and galvanized iron. About 150 families, or 25 per cent., use on an average 400,000 gallons per day. This is not used for drinking at all, as every family has a private well.

GIBSON COUNTY.

Ft. Branch.—No public supply.

Hazleton.—Wells, cisterns and springs furnish the water for this town. Land is well drained.

Oakland City.—In the fall of 1903 a private stock company built the water system which furnishes Oakland City with its supply. The water is taken from a pond covering about 19 acres and with an average depth of 12 feet. This has a mud bottom. The watershed is about 70 acres in extent with nine inhabitants living on it. The water is pumped to a standpipe having a capacity of 60,000 gallons. In the summer a slight odor is noticeable. About four miles of cast iron mains are in use, having galvanized iron service pipes. About 200 families, or 40 per cent., use 50,000 gallons per day. The water is soft.

Owensville.—No public supply.

Patoka.—Most of this water supply is driven wells from 10 to 28 feet deep. Sandy soil with gravel underlying.

Princeton.—The Princeton Water & Light Co., a private company, was built in 1893. The water is taken from the Patoka River. The watershed consists of 350 square miles, 75 miles of which are timbered lands and the balance cleared. Population averages 30 to the square mile. The normal flow of the Patoka River is about 4,800 gallons per second. There are several small towns located above the water station and sewage is received in the river above the intake. A standpipe with a capacity of 120,000 gallons is used. The water is soft and has an unpleasant odor and taste at times. Ten miles of cast iron mains with galvanized service pipes are used. Three hundred thousand gallons per day are consumed. About 200 families, or 30 per cent., use this supply, but there are also 600 wells in the town.

GRANT COUNTY.

Fairmount.—Fairmount owns its own supply, which was built in 1894 by the Howe Pump Co., of Indianapolis. This supply consists of six artesian wells, from 40 to 100 feet in depth. These wells are bored through black loam, subsoil, blue clay, underlying strata limestone. The water is pumped by suction and forced through mains by pressure. The water is hard. They have five

miles of cast iron mains, with galvanized iron service pipes. Four hundred and seventy-five families, or 10 per cent., use the water, and there are many wells in the town.

Gas City.—In 1898 the Seckner Contracting Co., of Chicago, built for Gas City its water supply. This is bored wells 300 feet in depth, through sandy loam with sandy subsoil. The water is forced from wells into reservoir by air compression. The reservoir has a capacity of 4,500 barrels, and is 45 feet in diameter and 12 feet deep. There are 10 miles of cast iron mains and galvanized iron service pipes. Four hundred and forty taps are in use, or 66 2-3 per cent. of the population use the water. There are also private wells used.

Marion.—Wells from 120 to 200 feet deep bored into stone furnish the water supply for Marion, and are owned by the city. The reservoir which holds the water has a capacity of 900,000 gallons, and the new one when completed will hold 2,000,000 gallons. This water has an odor and taste of gas. Twenty-five miles of mains of cast iron, with galvanized service pipes, are used. Twenty-six hundred families, or 75 per cent., of the population, use this water and about 1,500,000 gallons per day are consumed. The water from one of the wells is of a medicinal character.

Upland.—The Upland Water Works Co., a private corporation, furnishes the water supply for this town. The works were built in 1892. The water is from a drilled well 250 feet deep, 50 or 60 feet being in limestone. The soil is clay subsoil, blue clay, and perhaps a strata of gravel. The water is pumped direct into the mains by a force pump. The water is hard. About two miles of distributing mains are used, these and the service pipes being of galvanized and wrought iron. The water was analyzed several years ago by the State Board of Health. One hundred and eighty-five families, or 75 per cent., use this supply. There are several private wells in the town, being either drilled or bored to gravel 100 feet or more.

GREENE COUNTY.

Bloomfield.—The Home Light & Water Co., built in 1904 by Geo. Cadogan Morgan, of Chicago, supplies Bloomfield with its water. This is from wells 275 feet deep, capable of supplying 275,000 gallons daily. These wells are bored through 12 feet of

clay, then sand rock the balance of the way. It is pumped to a standpipe, this holding 35,000 gallons. The water tastes and smells of sulphur and is soft. The cast iron mains are four and one-half miles in extent, and the service pipes are of galvanized iron. The water has been analyzed by Robt. E. Lyons, of Indiana University. Ninety-two families, or 25 per cent. of the population, consume 30,000 gallons per day.

Linton.—The Linton Water Co., a private company, built in 1902 by F. H. Beeman & Co., Louisville, Ky., furnishes the water supply of Linton. There are six bored wells averaging 85 feet in depth, and now furnishing 300,000 gallons per day, which is half the capacity of the wells. The wells are bored through clay loam, then 25 to 30 feet blue clay and then 25 to 30 feet good gravel, in which the water is found. The water is forced into the mains by direct pressure, there being $11\frac{1}{2}$ miles of cast iron mains in use. The service pipes are galvanized wrought iron. The water was analyzed in 1902 by Dr. J. N. Hurty, of Indianapolis. Four hundred and fifty to 500 families, or 25 or 30 per cent., consume daily 300,000 gallons. There are a great many private wells used, practically all shallow wells, some of them dangerous. The public supply wells are drilled in Buck Creek Valley, a small stream which goes dry often, in fact is probably dry seven months out of the year. This empties into Bee Hunter ditch about a mile south of water station.

Lyons.—No public system. There are a few drilled wells from 120 to 200 feet deep, but the majority are about 15 to 30 feet deep. The soil is mostly clay and black loam, the black loam being decayed vegetable matter.

Worthington.—The Straw Board Rivers & Co., a private concern, built in 1897, furnishes the water supply for Worthington. This consists of wells bored 50 feet. The water is pumped to a standpipe which is 20x100 feet.

HAMILTON COUNTY.

Atlanta.—No public supply.

Arcadia.—There are two public wells drilled 220 feet deep. The majority of the citizens own their own drilled wells, ranging in depth from 50 to 250 feet.

172. Location unknown. 173. Edge of sidewalk.

Carmel.—No public system.

Cicero.—No public supply.

Noblesville.—The Noblesville Water & Light Co., a private company, built in 1891 and 1892, gets the supply for Noblesville from driven wells. There are 15 of these wells, ranging in depth from 60 to 70 feet through hard pan or blue clay into a gravel water bed. There are also two limestone wells 350 feet deep, operated by air compressor into reservoir, from which the supply is pumped into the water mains. The water from the other wells is pumped direct. The reservoir holds about 50,000 gallons. There are 12 miles of cast iron mains, with lead and galvanized iron service pipes, in use. Five hundred and fifty or 600 families use this supply, or about 20 per cent., and 400,000 gallons daily are consumed.

Sheridan.—No public supply.

Westfield.—No public supply.

HANCOCK COUNTY.

Fortville.—No public supply.

Greenfield.—Greenfield's supply is from driven wells the water from which is pumped. There are several miles of cast iron mains. About 90 per cent. of the people use the supply, and 200,000 gallons daily are consumed.

HARRISON COUNTY.

Corydon.—There are two public water supplies in Corydon. The town has a spring which furnishes water, and a private concern, the W. H. Keller Co., built in 1903, which gets its supply from the creek. This water is pumped into a reservoir 60x80 and 8 feet deep. There are about five and a half or six miles of mains of cast iron used. Service pipes are of galvanized iron. About 200 families, or 50 per cent., use the supply.

Elizabeth.—This town is supplied with water from two public wells bored 120 and 78 feet in depth, one dug well 30 feet deep, eight private wells and two private springs.

Iaonia.—No public supply.

Mauckport.—Public wells from 60 to 70 feet, bored, and one dug.

New Middletown.—No public supply.

HENDRICKS COUNTY.

Brownsburg.—No public supply.

North Salem.—No public supply. One well is 800 feet deep with flowing water.

Plainfield.—No public supply.

HENRY COUNTY.

Knightstown.—This town is supplied with water from a system of wells, which was built in 1894 by the Boughen Engineering Co., of Cincinnati. The wells are all bored to about 60 feet in depth, through four feet of soil, 15 feet of gravel, 40 feet of shale into limestone. There are eight of these wells. This water is pumped direct in day time, but standpipe service is used at night. The capacity of the standpipe is 100,000 gallons. Six miles of cast iron mains are used and the service pipes are galvanized iron. Two hundred and seventy-five families, or 50 per cent., use the supply, which averages about 60,000 gallons, consumed daily.

New Castle.—In 1889 this city built its own public water supply, consisting of wells drilled from 106 to 170 feet deep. The water is on top of a limestone strata. It is pumped to two reservoirs with a capacity of 9,000 gallons each. These are 10 feet deep by 40 feet wide. The water is hard. Cast iron mains 10 miles in extent are used, with galvanized iron service pipes. About 750 families, or 75 per cent. of the population, use the water, and the average daily consumption is 750,000 gallons.

Middletown.—Middletown's supply consists of three artesian wells bored by the town in 1896. These wells are 86 feet in depth and the flow is about three barrels a minute. There is an odor of sulphur at the dead ends of the mains. Four or five miles of cast iron mains in use. Galvanized iron used for service pipes. Two hundred families, or 50 per cent. of the population, use this supply.

HOWARD COUNTY.

Greentown.—A private plant has recently been installed in this town by the Delon & Co. Water Supply Co. The supply is a drilled well 100 or 125 feet deep of 4-inch galvanized iron pipe. The water is pumped into a covered reservoir 12 feet in diameter

* Not the same supply as other samples.

by 12 feet in height. As yet there has been only one mile of mains laid and this is of galvanized iron. About 25 families are using the water as yet. There are also many drilled wells in the town.

HUNTINGTON COUNTY.

Andrews.—No public supply.

Huntington.—In 1890 a public supply of drilled wells was established for the city of Huntington by William McGrew. These wells are drilled to a depth of 100 feet through soil, blue clay, subsoil, clay, underlying strata stone. The water is pumped to a standpipe having a capacity of 500,000 gallons. At times the water has the smell and taste of mossy river water, but it is believed if the mains were thoroughly flushed the water would be all right. There are over 22 miles of distributing mains used, and they are of cast iron pipe with lead service pipes. One million gallons daily are consumed and 1,500 families, or 65 per cent., use the water.

Markle.—No public supply.

Roanoke.—Private wells furnish the supply for this town.

JACKSON COUNTY.

Brownstown.—In 1898 the Phoenix Construction Co., of Chicago, built for Brownstown their water supply. This consists of one dug well 15 feet in diameter and 25 feet deep, with a capacity of 400 gallons per minute in summer, and in winter it can not be exhausted at all. Water enters through strata of gravel 20 to 25 feet deep, which extends to White River, one mile distant. Water comes to within 12 feet of the surface in summer. The soil is sandy. The water is pumped into a reservoir holding 90,000 gallons. There are two miles of mains of cast iron with service pipes of galvanized iron. About 33 1-3 per cent. of the people, or one hundred families, use the water.

Seymour.—The Seymour Water Co., a private company, had its plant built in 1889 by W. E. McMillan. The water is taken from east fork of White River and pumped to a standpipe 16 feet in diameter by 100 feet high. The water shed includes all that portion of the state drained by east fork of White River above the intake of the water supply. No sewage or waste is received in the stream nearer than Columbus, thirty miles above.

289 and 326. Ohio river water. * Gas formers present.

The water is soft. Cast iron pipes 16 miles in length, with wrought iron service pipes. About 550 families, or from 20 to 30 per cent. of the people, use the supply. About 1,000,000 gallons daily are used. The water company has completed recently a filtration plant with a capacity sufficient to filter the entire supply for the city. This is known as the Continental-Jewel filtration system.

Crothersville.—No public supply.

JASPER COUNTY.

Remington.—The Remington water works, owned by the town and built in 1897, gets its supply from bored wells. There are three of these wells; one a 1-inch well, is 360 feet deep, 2-inch well is 250 feet deep, 3-inch well is 200. The soil is black loam, underlaid by slate, then hard rock, almost like marble. The water is pumped to a reservoir.

Rensselaer.—Rensselaer owns its own water supply, which was built in 1898 by the Chicago Bridge & Iron Co., and which consists of a drilled well. This is drilled in rock something over 800 feet deep. A tank holding 100,000 gallons and over 100 feet high has the water pumped to it. There are five miles of cast iron mains, with lead and galvanized iron service pipes. Two hundred and seventy-two families, or 50 per cent. of the population, use the supply, and the average daily consumption is 300,000 gallons. There are also a good many private wells in use, all drilled in the rock.

JAY COUNTY.

Dunkirk.—A system of four driven wells, built in 1894, constitutes the water supply of Dunkirk. These wells are driven 200 feet and the water is pumped to a reservoir. The water is limestone. About 10 miles of distributing mains of iron, with lead and galvanized iron service pipes, are in use. Three hundred and fifty families, or 60 per cent., use the supply.

Portland.—Portland owns a supply of artesian wells built in 1890 by Fred Bimel. These wells are 100 feet deep with a flow of 300,000 gallons daily. They are driven through clay soil into limestone. There are 15 miles of cast iron mains, with lead serv-

ice pipes, which are supplied by gravity. Three hundred thousand gallons are consumed daily. About 300 families, or 50 per cent., use the water. There are also private wells in use.

Redkey.—No public supply.

JEFFERSON COUNTY.

Madison.—This city owns its own public water supply, built in 1871, and which gets its supply from the Ohio River and five wells. The current of the river is two miles per hour. The wells are bored, average depth being 100 feet, through fine sand all the way. The supply is good, though hard. The water is pumped to a reservoir 80 feet in diameter and 20 feet deep with a capacity of 720,000 gallons. Twenty miles of distributing mains of cast iron, with iron and lead service pipes, are used, and 1,100,000 gallons are consumed daily. Six hundred and fifty families, or 95 per cent., of the people use the supply.

Brooksburg.—Supply is from private cisterns.

JENNINGS COUNTY.

Vernon.—The town of Vernon owns its public supply, which was built in 1893, and which gets its water from the Muscatatuck Creek. The watershed is from 25 to 50 square miles. The water is pumped to a standpipe eight feet in diameter and 75 feet high. The water is soft. Two miles of cast iron mains, with cast iron service pipes, are in use. Eighty families, or 60 per cent. of the people, use about 20,000 gallons daily. None of the people use the water for drinking or domestic purposes, as that is supplied by private cisterns.

North Vernon.—This town built its own public supply in 1892 and gets the supply from the north fork of the Muscatatuck River and also from numerous springs. The watershed area is 15 miles long and two miles wide. Fifty per cent. is cleared. The water is pumped to a standpipe, which holds 90,000 gallons. The water is soft. Six miles of cast iron distributing mains are used with cast iron service pipes. Three hundred and fifty families, or 50 per cent. of the population, use the supply, and 250,000 gallons daily are used. The plant was built by the Bohen Engineering Co., Cincinnati.

JOHNSON COUNTY.

Edinburg.—In 1893 Edinburg had built for the town a dug well, Stevens & Bedwards, contractors, Logansport, Ind., building the same. This well is 20 feet deep and 16 feet wide, and dug in a gravel bed. It is walled with an 18-inch wall of hard brick laid in cement, gravel bottom. The water ordinarily stands about 10 feet in the well, but with the pump running continuously the water stands about four feet in the well. It is pumped to a standpipe having a capacity of 42,500 gallons. Water is hard. Four-inch, 6-inch, 8-inch and 10-inch glazed iron pipes are used for the four and a half miles of distributing mains; galvanized iron is used for service pipes. The supply is used by 125 families, or about 33 per cent. of the population, and 169,205 gallons are consumed daily.

Franklin.—The Franklin Water & Light Co., owned by the city and built in 1890, furnishes the water supply for this town. The supply is from bored wells 150 to 200 feet deep with the water pumped to a standpipe and reservoir, the capacity of the standpipe being 12,000 gallons. At times the water develops a smell and taste like pond water. The supply is hard. Cast iron mains eight miles in length, with galvanized iron service pipes, supply the 275,000 gallons daily, which is used by 50 per cent. of the people. Private wells and cisterns are also used.

Greenwood.—The Citizens' Water & Light Co., a private company, built three years ago, furnishes Greenwood with its public water supply. The water is from an 8-inch cased drilled well 68 feet deep, which is pumped into the mains. There are three and a half miles of cast iron distributing mains, the service pipes of which are of galvanized iron and lead. There are about 20 families, or 5 per cent. of the people, using this supply, and 50,000 gallons are used daily for all purposes. Nearly all the families have their own wells.

KNOX COUNTY.

Vincennes.—The Vincennes Water Supply Co., a private corporation, built in 1886 by S. R. Bullock & Co., of New York, gets its supply from the Wabash River. The water is pumped to a standpipe after being filtered, the capacity of the standpipe being 600,000 gallons. The distributing mains are of cast iron,

and enameled, there being 18 miles of mains in use. The service pipes are galvanized iron. Three hundred families, or 10 per cent. of the population, use this supply, and the average daily consumption is 800,000 gallons. At least 90 per cent. of the people use the water from driven wells in their yards.

KOSCIUSKO COUNTY.

Claypool.—No public supply.

Etna Green.—No public supply.

Leesburg.—Private driven wells furnish the supply of this town.

Mentone.—Dug, driven and bored wells furnish the water for this town. Some of it is of bad quality.

Milford.—Milford owns a system of wells built in 1902, which furnishes the public water for this town. There are four wells driven 408 feet to gravel and sand. The water is pumped to a standpipe. Over two miles of distributing mains of cast iron, with galvanized service pipes, are in use. Fifty-five families, or 25 per cent., use this supply.

Pierceton.—In 1897 this town had a tubular well built, eight inches in diameter, by the C. L. Olds Co., of Ft. Wayne. This well is 212 feet deep through soil, clay, gravel and sand. It is pumped into a supply tank with a capacity of 500 barrels. Cast iron pipe is used for the distributing mains, of which there are about two miles, and gas and lead pipe are used for service pipes. Seventy-five per cent. of the population use the supply and about 15,000 to 20,000 gallons daily are used.

Silver Lake.—No public supply.

Warsaw.—A private company, called the Warsaw Water Works Company, furnishes the supply for Warsaw. The water is taken from a small lake about 100 acres in area with a sandy and marshy bottom. The watershed is about 300 acres with residences half way around, farm and marsh rest of the way. There is a standpipe, but it is seldom used, though it is full at all times. The water is pumped by direct pressure. The water develops a fishy taste and smell, and at times of decaying growths. Six miles of mains of cast iron, with galvanized iron service pipes, are used. There are 725 subscribers for this supply, or about 25 per

cent. About 1,000,000 gallons per day are used. All drinking or water for domestic use is from private wells, as the public supply is not fit.

LAGRANGE COUNTY.

Lagrange.—Lagrange owns and operates its public water supply, which was built in 1893 by Gordon Co., Hamilton, O. This consists of six wells, average depth 90 feet, soil glacial drift with reservoir under three or more clay strata. These wells are bored and pipes driven in bore with perfect plugging. The water is pumped direct into the mains, of which there are four and one-half miles. The mains are of cast iron, with galvanized iron service pipes. There are 230 families and 50 business houses, or 55 per cent. of the population, using the supply. These wells are supposed to be bored into a large lake or reservoir which is struck at 90 feet. The water is very abundant and potable.

Wolcottville.—No public supply.

LAKE COUNTY.

Crown Point.—In 1895 and 1896 the Seckner Contracting Co. built a system of wells for Crown Point. These wells are of six-inch pipe and are 81, 75, 69 and 57 feet. The soil is clay and water sand. This water is pumped to a reservoir and then to a standpipe. The standpipe is 12x100 feet and the reservoir is 8x10 feet. The water is hard. Six miles of mains are used of cast iron. The service pipes are galvanized iron and lead. About 40 per cent. of the town use the water and 100,000 gallons per day are consumed. Many private wells are also used.

East Chicago.—In 1894 the city of East Chicago built their public system. This has been in the hands of a receiver since November, 1903. The water is from Lake Michigan and is pumped to a standpipe 16 feet in diameter and 95 feet high. The lake receives waste from the Standard Oil Company's plant at Whiting. The water tastes and smells of petroleum and decayed organic matter and is soft. Twenty-five miles of cast iron mains, with lead and galvanized iron service pipes, are used. Fifteen hundred to 1,600 families, or 95 per cent. of the population, use this supply, and 3,000,000 gallons daily are consumed.

* Gas formers present.

Hammond.—Hammond owns its own public supply, which was built in 1892 by the Lake Water Co. The source of the supply is Lake Michigan. The lake receives sewage, etc., from South Chicago, Ill. The water is pumped direct from the lake into the mains, of which there are from 65 to 67 miles. There is an odor and taste of petroleum from the Standard Oil Co. at Whiting. The mains and service pipes are of iron. The entire population uses this supply and about 6,000,000 gallons per day are consumed.

Hobart.—The supply of Hobart is from wells which were built by John P. Dales. These wells are dug and driven through subsoil, and the water is pumped to a standpipe. There are four miles of cast iron mains, 8-inch, 6-inch and 4-inch, and 115 families use the supply, or 35 per cent. of the population. Twenty-two thousand gallons per day are used. The standpipe holds 56,000 gallons.

Lowell.—Lowell owns an 8-inch bored well 187 feet deep, which was built for the town in 1898 by the John P. Dales Co., of Chicago. The well is bored 80 feet through solid rock, and the water rises to within five feet of the surface. The capacity of the lift pump is 500,000 gallons per day. This water is pumped to a standpipe 100 feet high and 20 feet in diameter with a capacity of 80,000 gallons. At times the water develops an unpleasant odor and taste. The supply is soft. Cast iron mains four miles in extent and of 4-inch, 6-inch and 8-inch pipe distribute the water. The service pipes are $\frac{3}{4}$ -inch gas pipe. Two hundred and forty families, or 70 per cent., use the supply.

Whiting.—The Standard Oil Co. built a plant at Whiting about 15 years ago, and still own it. The water is taken from Lake Michigan and is supplied by direct pressure. Occasionally the water develops an oily taste. Ten miles of mains are used, these and the service pipes both being of iron. The entire population, probably from 1,000 to 1,200 people, use the supply, and from 500,000 to 1,000,000 gallons per day are used.

LAPORTE COUNTY.

Laporte.—In 1870 the city of Laporte built its public water supply. The water is obtained from Pine and Stone lakes with a large well and pumps five miles east in Little Kankakee bottom.

The area of the two lakes is about one and a half square miles, depth of the lakes is estimated at 12 feet, with places 50 feet deep, sandy bottom mostly. The watershed area is about four square miles, one-fourth wooded and three-fourths cleared, with 400 inhabitants thereon. There are many summer cottages on these lakes and picnic parties are held there often. The well of the Little Kankakee is sunk at the foot of the eastern slope, upon the marsh, and is of brick. It is 30 feet in diameter, 25 feet deep and is covered. The bottom is sand. This is pumped by electricity, which is generated at the pumping station at Laporte. The water is distributed from the reservoir by Nordyke pumps. The reservoir is part of Lily Lake fenced off and is about 60 feet in diameter and five feet deep. The water is hard and the water from the well has considerable mineral salts in it. Cast iron is used for the mains and wrought iron for the service pipes. One million gallons a day are consumed, and about 50 per cent. of the population use the water, but it is not used for drinking or domestic purposes as that supply is all from private wells.

Michigan City.—The Michigan City Water Co. was established in 1888 and the city now controls it and owns most of the stock. The state also has a water plant for supplying the State Prison. The water is taken from Lake Michigan, and is supplied by direct pressure. At times the water develops an unpleasant odor and taste. It is soft, and there are 18 miles of mains used. These are of cast iron, and the service pipes are iron and lead. About 1,300 families, or 25 per cent. of the population, use the supply, and 2,700,000 gallons per day are consumed. There are many private wells used, these varying from 15 to 50 feet. The intake is at a depth of about 42 feet, not entirely below the depth of driftwood. It is also at the distance from the shore where slush ice is common and often the current takes the sewage from the city at least into the neighborhood of the intake. But when the conditions are such as were evidently contemplated when the plant was built, pure water is obtained.

Westville.—No public water supply.

LAWRENCE COUNTY.

Bedford.—This city owns its water plant, which was built in 1892. The supply is taken from the east fork of White River, and is pumped to a standpipe having a capacity of 36,000 gallons.

616. North side square. 647. Sixteenth street. 658. West side square. 659. East side square.

The water is soft and there are 10 miles of distributing mains. These mains are of cast and wrought iron and the service pipes are galvanized iron. Four hundred families, or 25 per cent., use the water, and 1,500,000 gallons daily are consumed. The water is not filtered and is not used for drinking purposes except by very few. Private wells furnish most of the drinking water.

Mitchell.—Bored and dug wells furnish the supply for this town.

Oolitic.—No public supply.

MADISON COUNTY.

Alexandria.—In 1894 the Segner Contracting Co. built a system of wells for Alexandria. These wells are drilled 300 to 900 feet deep, and one is a flowing well, which is connected with the pumping station by common iron pipe, but it is to be replaced with wood pipes. The water is pumped to a standpipe with a capacity of 235,000 gallons. The water is hard and at times has a slight taste of iron. About four and a half miles of cast iron distributing mains are used, with galvanized wrought iron service pipes. About 800 families use this supply and the average daily consumption is 500,000 gallons. There are also many private wells.

Anderson.—Eleven or twelve years ago the city of Anderson built a public water supply, which gets its water from White River. This stream is very variable, volume indefinite, slow current, shallow; no sewage goes in the stream within three miles above the intake of the supply at present. The water is supplied by direct pressure from clear well. There are thirty-one miles of distributing mains of standard cast iron with lead and galvanized iron service pipes. About 2,100 taps are used, or about 50 per cent. of the people use the water, and the average amount used daily is 2,000,000 gallons. There are also many private wells. A mechanical filter plant has been installed recently and is doing good work. During hot weather a grassy odor was noticeable in the raw river water, but is not in the filtered.

Elwood.—The Elwood Water Co., a private company, built in 1891, furnishes Elwood with its public water supply. The system is one of driven wells ranging from 100 to 175 feet in depth and furnishing from 15,000 to 20,000 gallons per day. The soil

is loose subsoil, and hardpan with an underlying strata of gravel. The water is pumped into the mains except in case of fire, when water from a reservoir is forced into the mains. At some of the hydrants there is a musty odor. Iron mains are used 17 miles in extent and iron and lead service pipes are used. Seven hundred or 800 families, or five or six per cent. of the population, use the supply and about 100,000 gallons per day are consumed. Many private wells are used, these generally being shallow or from 10 to 20 feet in depth.

Frankton.—In the fall of 1899 the W. H. Wheeler Co. built for the town of Frankton a public system. This supply consists of a dug well 25 feet deep, dug in water bearing gravel. The water stands 11 or 12 feet in the well, which is 20 feet in diameter. The water is hard. Three miles of mains of cast iron are used, with iron service pipes. There are about 60 or 75 taps in use, but less than one per cent. use this water for drinking, the drinking water coming from private wells. The public supply is used mostly for sprinkling lawns and streets, and 50,000 gallons daily are used.

Ingalls.—No public supply.

Lapel.—No public supply.

Orestes.—No public supply.

Pendleton.—All private wells, mostly drilled from 40 to 150 feet.

Perkinsville.—No public supply.

Summitville.—The Summitville Water Co., built in 1902 and owned by the town, furnishes the public water supply. The supply is from a drilled well 400 feet deep, drilled through Trenton rock into shale. The water at times develops an unpleasant odor and taste and is sometimes the color of brick. It is hard. Three miles of cast iron mains, with galvanized iron service pipes, are in use. Ninety families, or about 30 per cent of the population, use the water.

MARION COUNTY.

Broad Ripple.—No public supply. All water used is from private wells.

Indianapolis.—The city of Indianapolis is supplied with water by the Indianapolis Water Co., a private company, built in 1870. The supply is obtained from deep wells and a canal from White

River, which is dammed about 10 miles above the intake, thus providing a large storage reservoir. This reservoir or lake is largely frequented by visitors and during the summer season thousands visit the park along its shores each day. Canoeing and boating is not prohibited and all waste from the adjacent park flows into the river. The stream also receives sewage in large quantities from above the intake. The average depth of the wells is 300 feet, capacity 18,000,000 gallons every 24 hours; and the capacity of the filtration system is 24,000,000 gallons per 24 hours. The water is supplied by direct pressure system. There are 270 miles of mains used in distributing the water, and these are of cast iron with lead pipe used in the streets. There are 16,000 taps in service, and including factories and schools, etc., the number is estimated at 100,000 using the supply. The city owns and operates water works in that part of the city called Brightwood.

New Augusta.—Private wells supply this town.

Southport—No public supply.

MARSHALL COUNTY.

Argos.—In 1897 this town built a public supply, which consists of a well driven through soil, sand, subsoil, clay, underlying strata of blue clay. The water is pumped to a cistern which is entirely enclosed. Its capacity is 800 barrels. Cast iron is used for the mains, of which there are five miles, and galvanized iron is used for service pipes. Forty or fifty families, or 10 per cent., use the supply, and about 30,000 gallons per day are consumed. There are also many private wells driven about 20 to 30 feet.

Bourbon.—The Union Water, Light & Power Co., a private concern, built in 1899 by Duke M. Farson, of Chicago, furnishes Bourbon with its public supply. This consists of bored wells 8 inches in diameter and 150 feet deep. The water is pumped to a standpipe with a capacity of 60,000 gallons. Four miles of standard cast iron pipes are used for the mains, with galvanized iron for service pipes. About 25 families use the supply for all purposes and about 100 for sprinkling, or four per cent. for domestic purposes and 10 per cent. for all purposes. An average of 30,000 gallons per day is used. There are many private wells in this town. There is also a reservoir with a capacity of 20,000

gallons, with a force pump which is used for fire purposes. This is separate from the standpipe.

Bremen.—Twelve years ago the town of Bremen built a public system of wells. There are six of these wells bored to a depth of 65 feet, through soil, muck, quicksand, clay, hard pan, then limestone or slatey layer into gravel. The water is pumped to a standpipe holding 2,700 barrels. This water is hard. Iron and galvanized iron service pipes are used for the five miles of distributing mains. Two hundred thousand gallons daily are consumed and 90 per cent. of the population use the supply. There are many private wells in use.

Plymouth.—This town owns a system of flowing wells from 40 to 200 feet deep, which were built about 10 years ago. The water is supplied by direct pressure and contains sulphur, iron and magnesia. The mains are of iron and some wood pipes are used. The service pipes are of iron. About 150,000 gallons daily are consumed.

MARTIN COUNTY.

Loogootee.—No public supply.

Shoals.—No public supply.

MIAMI COUNTY.

Amboy.—Private drilled wells supply this town.

Bunker Hill.—No public supply.

Converse.—In 1892 the town of Converse had built a system of drilled wells 240 feet deep. These wells are drilled through clay, soil, subsoil, gravel, shale and rock. The water is pumped to a tank on steel trestle, with a capacity of 30,000 gallons. There is no odor or unpleasant taste, but it leaves a red deposit. The water is hard. Cast iron is used for the two miles of mains, and galvanized iron is used for service pipes. About 180 families use the supply, or 75 per cent., and 135,000 gallons daily are used for all purposes.

Macy.—No public supply.

Peru.—The city of Peru built a system of drilled wells in 1878. These wells are about 470 feet in depth and are drilled in limestone. Part of the water is pumped to a reservoir. The water is

hard limestone. There are about 25 miles of distributing mains, and these are of cast iron with lead service pipes. Probably 1,700 families use the supply, and 1,500,000 gallons daily are consumed. There are many private well used.

MONROE COUNTY.

Bloomington.—The Bloomington Water Works Co., built in 1893 for the city, gets its supply from a pond which is 32 acres in area and 15 feet deep, with a mud bottom. The watershed is $1\frac{1}{2}$ miles square and is both wooded and cleared, with three families living thereon. The water is pumped to a reservoir and from there is pumped direct into the mains. The water is filtered through a bed 60 feet square and 8 feet deep, filled with 3 feet of sand and gravel. Fourteen miles of mains are used, these consisting of cast iron pipes for distributing mains and galvanized wrought iron for service pipes. Seven hundred families, or 40 per cent. of the population, use this supply, and probably 60 per cent. use cistern water. About 30 per cent. use water filtered through charcoal and gravel.

Ellettsville.—No public supply.

MONTGOMERY COUNTY.

Alamo.—No public supply.

Crawfordsville.—The Crawfordsville Water & Light Co., built in 1885 by Commegys & Lewis, is owned by a private company. The supply is from springs and wells, the springs being 12 to 18 feet deep and the wells 50 to 200 feet deep. The wells are driven through soil, sand and gravel to a depth of 200 feet, then follows 400 feet of shale. The water is pumped to a standpipe from a reservoir, the standpipe being 16 feet in diameter by 175 feet high, and the reservoir is 12 feet deep and 80 feet in diameter. There are about 15 miles of cast iron mains, and wrought iron is used for the service pipes. About 500 families use the supply and 1,000,000 gallons are used daily for all purposes. There are many private wells also in use.

Darlington.—A private company owns and operates a supply for this town. The water is taken from a spring. Two miles of distributing mains are used, and these and the service pipes are of iron. Fifty families, or about $33\frac{1}{3}$ per cent., use the supply. Many private wells are also used.

Ladoga.—No public supply.

Linden.—No public supply.

New Ross.—No public supply.

Waveland.—No public supply.

Waynetown.—No public supply.

Wingate.—Private wells furnish the supply for this town.

MORGAN COUNTY.

Martinsville.—In 1893 the town of Martinsville built a dug well 35 feet deep. The water is pumped direct into the mains, of which there are seven miles of cast iron. Eighty per cent. of the population use about 600,000 gallons daily. There are also many private wells in use.

Mooreville.—A private company called the Public Service Company furnishes Mooreville with its public supply. Built in 1904, this supply consists of two drilled wells. One is an 8-inch well bored 311 feet, but this is not in use. The other is 40 feet deep, then drilled through rock eight feet. This well is 14 feet in diameter, walled with brick and then an 8-inch space between the wall, and the clay is solidly concreted. This is walled down for 20 feet with the brick. Most of the water in this well rises from the bottom through drill holes and stands at a height of about 18 feet. The rate of the flow is about 150 gallons per minute. There are $3\frac{1}{4}$ miles of mains, and these are of cast iron with galvanized iron service pipes. About 78 families use the supply, or 18 per cent. of the population, and the average daily consumption is 15,000 gallons.

Paragon.—Driven wells furnish the supply for each family.

NEWTON COUNTY.

Brook.—No public supply.

Goodland.—Private wells bored and dug furnish the supply.

Kentland.—Kentland owns a well which was bored in 1895 for gas and is about 1,100 feet deep, with the water supply coming from a depth of about 300 feet. This is bored through black soil, clay subsoil and sand and clay. This water is pumped to a reservoir 20 feet in diameter and 20 feet high. The water has an unpleasant odor and taste of carbon bisulphide.

1

167, City Well No. 1. 166, City Well No. 2.

and is soft. Two miles of iron mains, with galvanized service pipes, are used. Eighty-five families use the water, or about 40 per cent. There are also private wells in the town. The water from the hydrants varies in color from milky to almost black.

Morocco.—Private wells bored to limestone rock furnish this town with its supply.

Mount Ayr.—Private wells bored from 50 to 200 feet supply the water for public use in Mount Ayr.

NOBLE COUNTY.

Albion.—In 1895 this town had Olds, of Ft. Wayne, build for it a system of driven wells. These wells are 97 feet deep and are driven through soil, black loam, subsoil, blue clay; underlying strata, gravel. The water is pumped by direct pressure and is hard. Iron pipes are used for the mains and service pipes and about eight miles of distributing mains are in use. Two hundred and fifty families, or 60 per cent. of the population, use this supply, and about 50,000 gallons daily are used.

Avilla.—Avilla owns its own water supply, which it built some time ago; this consists of a drilled well 100 feet deep, the water from which is pumped to a reservoir 18 feet high by 18 feet in diameter. The watershed is $1\frac{1}{4}$ square miles cleared and with 750 inhabitants. The supply is slightly hard and flows through $1\frac{3}{4}$ miles of distributing mains. These mains are of 4-inch iron pipes with $\frac{3}{4}$ -inch galvanized iron service pipes. Seventy-five families use the water, and an average of 500 gallons daily is used. Bored wells owned by the people are also used.

Ligonier.—Sixteen years ago Ligonier built a public water supply, and in 1904 and 1905 a new plant was installed. This supply is of driven wells, four in number, 65 feet, 126 feet, 82 feet and 92 feet in depth. These wells are driven through upper soil, sand and gravel, 10 feet deep, blue clay about 30 feet deep, then water gravel. About 170 feet is sandstone and beyond that fine sheet water. The water is pumped to a tank that holds 100,000 gallons. Cast iron is used for the distributing mains, and galvanized wrought iron is used for service pipes. Nine miles of mains are used to distribute the water, and 350 taps are used, or about 50 per cent. of the people use the supply, and an average of 200,000 gallons per day is used.

Kendallville.—The town of Kendallville installed a public water supply in 1887, which consists of driven wells, ranging in depth from 50 to 76 feet. The wells are driven through hard pan at 30 feet to water gravel. The water is supplied by direct pressure. This town is located at the source of the Elkhart River watershed. Ten miles of cast iron mains, with galvanized iron and lead service pipes, are in use. Every 24 hours 300,000 gallons of water are pumped, and 450 families, or 50 per cent. of the people, use the supply.

OHIO COUNTY.

Rising Sun.—Water from cisterns and driven wells supply this town with its water.

ORANGE COUNTY.

French Lick.—A public supply is being installed in this town which will get its supply from a stream 3x3 feet square. The hotels use the mineral water which comes from numerous springs, and also water which is pumped from French Lick Creek and is filtered by private filters.

Orleans.—No public supply.

Paoli.—In 1895 a private company built a water supply in Paoli which was afterward sold to the town. The source of the supply is Lick Creek, which is inexhaustible and of good quality. This is pumped to a reservoir. Cast iron is used for the mains, and galvanized and black iron for the service pipes. One hundred families use this water, or about 40 per cent. There are also several private cisterns used and several public wells that are deep.

West Baden.—The West Baden Springs Co., a private company built 12 years ago, furnishes the supply for this town. The source of the water is Lost River, a stream the volume of which is unknown. The watershed is cleared land 6 square miles in area with no inhabitants. The reservoir holds 1,000,000 gallons and is 600 square feet in area and 10 feet deep. There are two miles of mains of cast iron pipe, with galvanized iron service pipes. Fifty families, or 50 per cent. of the population, use this supply. The water is soft.

OWEN COUNTY.

Gosport.—No public supply.

Spencer.—No public supply.

PARKE COUNTY.

Diamond.—No public supply.

Rockville.—In 1903 Rockville established a public water supply for the business portion of the town, which consists of driven wells, 106 feet deep. Twenty-four hours' flow raises five feet of water in a tank 18 feet in diameter. The well is driven through hardpan. The water is pumped to a tank holding 34,000 gallons. Iron is used for the mains and service pipes and about one-half mile of distributing mains are used. The business portion of the town and a few families living in the business section are the only ones using the supply. This is only a small plant erected by the town to supply business houses, court house, jail, electric light plant, etc. The resident district is supplied entirely by wells.

Rosedale.—No public supply. Water is from cisterns and driven wells.

PERRY COUNTY.

Cannelton.—The Cannelton Water Works, a private corporation built about 12 years ago by W. W. Taylor, furnishes this town with its water supply. The source of the supply is the Ohio River and the water is pumped to a reservoir 150x100x20 feet. The water is soft. Four miles of distributing mains are used, these being of wood with galvanized iron service pipes. Two hundred families, or 50 per cent., use 25,000 gallons per day. The Secretary of the Board of Health reports that the water at times develops a very bad odor, and that the reservoir is nothing but a mud hole on the side of the hill, not protected in any way, and with a green scum over it most of the time.

Tell City.—Tell City owns a plant which was installed in 1902 and was built by A. C. Kennedy, of Rockport. The supply is from wells situated on the banks of the Ohio River, but water is said not to be derived from the river. The wells are 80 feet deep through soil, yellow clay, slate and gravel and sand. The water is pumped to a standpipe with a capacity of 110,000 gallons. There

are four or five miles of mains of iron used, with service pipes of galvanized iron. Fifty per cent. of the inhabitants use this supply.

Troy.—Private driven and dug wells furnish this town with its supply.

PIKE COUNTY.

Petersburg.—Petersburg owns a public water supply which was built in 1901, and which is called the American Light & Water Co. This supply is taken from White River, and this receives waste and sewage from all factories and cities on both forks above the intake in very large quantities. This water is pumped to a standpipe which holds 120,000 gallons. There is both an unpleasant odor, musty, and a bad taste. Five and a half miles of mains are used, these being of cast iron with galvanized service pipes. One hundred families, or 20 per cent. of the population, use the water, and 50,000 gallons per day are consumed. The schools are supplied with water from deep drilled wells.

Winslow.—No public supply.

PORTER COUNTY.

Chesterton.—Private wells and cisterns furnish the supply for this town.

Hebron.—No public supply.

Valparaiso.—The Valparaiso Home Water Co. furnishes the supply for this city. At present it is the property of a private company, but as soon as the city pays off the bonds against it, it will become the property of Valparaiso. The plant was built in 1886 by the Henry B. Smith Co., of Bay City, Mich. The water is taken from a lake two square miles in area and 25 feet deep, with loamy bottom. The watershed is eight square miles in area, with 50 inhabitants thereon in winter and 200 during the summer months. Picnic parties are held there frequently in the summer. This water is pumped by direct pressure. When water stands in the pipes in hot weather it develops an unpleasant odor and taste; it is soft. Thirteen miles of wood mains, with lead service pipes, are used. One thousand families, or 65 per cent., use the supply and 950,000 gallons are used daily. The greatest trouble experienced with this supply is to control the ground adjacent to the lake during the summer.

* Gas formers present.

POSEY COUNTY.

Cynthiana.—This town has three public wells two of which are drilled 180 feet deep; the other is a dug well, 40 feet deep. The schoolhouse well is drilled, but is hardly a success, as the water has been muddy at times. Most of the supply is from cisterns and dug wells.

Hensler.—No public supply.

Mt. Vernon.—The Mt. Vernon Water Works Co., a private concern, built in 1886, with a Deutch Gravity System Filter plant, added in 1903, controls the water supply for Mt. Vernon. The water is taken from the Ohio River. The nearest town above the intake is Henderson, Ky., which is 20 miles above. A stand-pipe is used with a capacity of 196,000 gallons and the supply is of soft water. Nine miles of distributing mains of cast iron, with lead and galvanized iron, are used in distributing the water to the 450 families using the supply. About 50 per cent. use the water, and 750,000 gallons daily are consumed. There are also many private wells used.

New Harmony.—The water supply for this town is from two private tanks, one owned by M. B. Pote, and which was built in 1895 for him by W. W. Robb, the other being owned by Arthur Dransfield, and built by himself five years ago. The water supply for these tanks is from driven wells about 35 feet deep, driven through sand 3 feet, hardpan two feet, fine white sand five feet, a 4-foot strata of coarse sticky gravel, with sand 10 feet, 2 feet of coarse gravel and then white sand. The water is pumped by gasoline engines to the wooden tanks holding 200 barrels and 350 barrels. The water is hard. A little over a mile of mains are used, with iron for the pipes and service pipes. Fifty families are using the water and about 1,000 barrels daily are consumed. Many driven wells are also owned by the people.

Poseyville.—No public water supply at present, but one is contemplated.

PULASKI COUNTY.

Francisville.—No public supply. Bored wells used.

Monterey.—No public supply.

Winamac.—No public supply. A few dug wells are used, but the majority are driven wells from 40 to 60 feet deep.

PUTNAM COUNTY.

Bainbridge.—No public supply. Town has four bored wells from 75 to 160 feet deep. Bainbridge is on the highest point on the Monon Railroad. Contiguous lands all cleared.

Greencastle.—The Greencastle Water Works Co., a private company built in 1887 by Bullock & Co., of New York, furnishes the supply for Greencastle. The water is taken from the Big Walnut stream, the source of which is in Boone County. The watershed is both cleared and wooded. The water is pumped to a standpipe 130 feet high and 30 feet in diameter. The water is medium. Cast iron mains with galvanized iron service pipes constitute the nine miles of distributing mains. Between 800 and 900 families, or 85 per cent., use the supply, and an average of 75,000 gallons per day are used. It is used by several railroads going through Greencastle and by mills. There are very few wells, say 3 per cent., the remainder use cistern water.

Roachdale.—No public supply.

Russellville.—No public supply.

RANDOLPH COUNTY.

Farmland.—No public supply.

Lynn.—No public supply.

Parker.—No public supply.

Ridgeville.—No public supply.

Union City.—In 1873 this city built a system of wells for furnishing the public water supply. Two of these wells are dug to a depth of 35 feet, with a capacity of 275,000 gallons, dug through sand and gravel; four wells are drilled through limestone, furnishing 500,000 gallons per minute, but these wells are only used when the dug wells are not sufficient, as in case of fire or drought. The water is pumped into mains with pressure sufficient for fire. Seventeen miles of mains of wood and iron, with lead service pipes, are used. Five hundred families, or 90 per cent., use this supply, and the average daily consumption is 306,000 gallons. This supply is also used by Union City, Ohio.

Winchester.—The Citizens Water & Light Co., built by them in 1900, and which is a private company, furnishes the water supply for this town. The supply is obtained from drilled wells 200

feet deep and 10 inches in diameter. A brick reservoir is used, 20 feet deep and 20 feet in diameter, covered. The water is pumped through the mains by direct pressure. This supply is hard. Seven miles of iron mains and iron and lead service pipes are used. About 275 families, or 50 per cent., use 500,000 gallons per day.

RIPLEY COUNTY.

Batesville.—The Batesville Water Works Co., built in 1902, and owned by a private company, furnishes the water supply for this town. The supply is from ponds and a spring. One pond is located in the Fair Grounds inside of the half-mile track; depth six or eight feet, with white clay bottom. There are also two small ponds connected to water works. The watershed is about 60 acres, partly wooded and with one family living on grounds. Picnic parties are frequent in summer and boating is allowed on the pond. The spring is 18 feet deep and supplies 30,000 gallons of water per day; clay and sand bottom. This spring is dug. The water is pumped to a tank holding 50,000 gallons, and the water often develops an unpleasant taste and smell like that of swamp water. There are three miles of mains in use, these being of cast iron, with rod iron and lead for the service pipes. About 80 families use this supply and an average of 60,000 gallons per day are used.

Versailles.—No public supply.

RUSH COUNTY.

Carthage.—No public supply.

Rushville.—In 1896 Rushville had built by Howe, of Indianapolis, deep tubular wells. The water from these wells is pumped to a reservoir holding 400,000 gallons and about 32 feet in diameter. This water is hard. Cast iron and galvanized iron compose the 14 miles of mains and service pipes. Four hundred families use this water, or 50 per cent., and the average daily consumption is 1,500,000 gallons.

SCOTT COUNTY.

Scottsburg.—No public supply. The wells are mostly bored through dark soil, subsoil clay, with strata of quicksand. A public supply will soon be built.

SHELBY COUNTY.

Morristown.—No public supply. One well, 80 feet deep, supplies a good many of the inhabitants living in that section.

Shelbyville.—The Citizens Water & Light Co., built 21 years ago by Commeygs & Lewis, is owned by a private company. The supply is from driven wells from 56 to 75 feet deep in gravel. The supply is pumped direct to mains, 15 miles of which are used, these being cast iron. Three hundred families use this, or about 10 per cent. of the population. The average daily consumption is 1,500,000 gallons.

SPENCER COUNTY.

Chrisney.—No public supply.

Dale.—No public supply.

Grand View.—No public supply.

Rockport.—A private company, called the Rockport Water Works Co., built in 1877 by A. H. Kennedy, and getting the supply from deep wells, furnishes this town with its public water supply. These wells are 90 feet deep through hardpan, about 20 feet from the surface, into gravel. The water is pumped to standpipe holding 60,000 gallons. This water is hard. Six miles of distributing mains are used, these being of cast iron with galvanized iron service pipes. Nearly all the population uses the supply and about 450 taps, consuming daily 250,000 gallons, are in use.

St. Meinrad.—In 1874 this town built a supply consisting of well and spring. The spring is piped into the well, going about 300 feet under ground. The land is all cleared on the watershed and about 200 inhabitants live thereon. The flow is from 500 to 1,000 gallons per day. The well is 15 feet deep, through rich ground subsoil, some clay, underlying strata mostly slate. The well is dug and the vein of water comes from what was formerly an old coal bank. The water is supplied by gravity from the spring to the well. The water tastes and smells of iron and sulphur. An iron pump is used and the pipe connecting the spring and well is of galvanized iron. On top and on the other side of the hill from the source of the water supply, about 200 feet distant, is a cemetery. There is a very small brook between the spring and the cemetery.

ST. JOSEPH COUNTY.

New Carlisle.—Twenty-six years ago a system of driven wells were built for this town by G. Morgan, of Chicago. These wells are 118 feet deep, driven through gravel and with a capacity of 33,000 gallons per day. This water is pumped to a reservoir holding 33,000 gallons, and which is 16 feet deep and 20 feet in diameter. The supply is hard. Two miles of wooden mains, with galvanized iron service pipes, are used. One hundred families, or 99 per cent., use this water, and the 33,000 gallons are used in a day's time.

Mishawaka.—This town owns a public supply which takes its water from the St. Joseph River. This river receives sewage from above the intake of the supply and during the summer months there are many picnics held there. The water is forced into the mains at 40 pounds pressure. The mains are iron and iron and lead service pipes. This supply is not used for drinking purposes at all, that water coming from private wells.

North Liberty.—Two town wells and private wells supply this town.

River Park.—No public supply. Driven wells furnish the water.

South Bend.—In 1873 the city of South Bend had a system of artesian wells built for its public water supply. There are 63 of these wells with an average depth of 95 feet, and during 1905 these pumped 1,485,555,108 gallons. The wells go through sand and gravel. A standpipe holding 30,000 gallons, and direct pressure is used. Seventy-two and one-half miles of mains are used and these are of cast iron with lead to curb and galvanized iron from curb. Six thousand families use this supply, or 50 or 60 per cent. of the people, and 4,064,529 gallons daily are consumed. Many private wells are in use.

Village.—Driven wells owned by the different families and from 90 to 110 feet in depth furnish this supply.

Walkerton.—In 1897 this town had three driven wells built for its public supply. These wells are driven 40 feet and water comes to the surface and would flow. They are driven into gravel. This water is pumped to a standpipe with a capacity of 1,000 barrels, this being 80 feet on a derrick and is 20 feet deep and 16 feet

in diameter. The water is hard. There are three miles of distributing mains used, these being of cast iron. Three hundred families use the water, or 50 per cent. of the population, and 60,000 gallons are used daily.

STARKE COUNTY.

Hamlet.—No public supply. Private driven wells.

Knox.—No public supply.

North Judson.—Private driven wells furnish the water for this town.

STEBEN COUNTY

Angola.—A private company, called the Angola Electric Light, Power & Water Co., which was built in 1892 by the Kinney, Croston & Pilliod Co., gets their supply from bored wells with an average depth of 100 feet. These wells are bored through sandy loam surface, clay and deep gravel. When the mains are not flushed often the water develops a musty smell and taste. Holly pumps are used. Seven and one-half miles of distributing mains are used, these being composed of iron with galvanized iron and lead service pipes. Four hundred and fifty families, or 20 per cent., use 300,000 gallons every 24 hours. Many private wells, driven from 35 to 100 feet deep, are used. When thoroughly flushed the water appears pure, but the mains are not flushed often enough and the water is often orange color and full of sediment.

Ashley.—No public supply.

Tremont.—No public supply. There is a driven town well about 90 feet deep which goes through gravel, subsoil clay, hardpan; underlying strata from which water is taken is gravel.

Hudson.—No public water supply.

SULLIVAN COUNTY.

Carlisle.—No public supply.

Farmersburg.—Private wells and cisterns furnish the supply for this town.

Shelburn.—No public supply.

Sullivan.—Sullivan now owns a public system, the supply of which is taken from a small creek. This was built by Howe & Co. eight years ago. This creek receives much water from several coal mines above the dam and is far from being a satisfactory supply. It is pumped to a standpipe 80x20 feet and from there flows through eight miles of mains having galvanized iron service pipes. About 450,000 gallons per day are used, but only for sprinkling and such purposes, the water for drinking and domestic purposes coming from private wells. The town is now figuring on sinking wells. The water is very hard and smells and tastes of sulphur.

SWITZERLAND COUNTY.

Vevay.—This town owns and operates a water supply which was built in 1895 by Guild & White, of Chattanooga, Tenn., and which gets its water from the Ohio River. This water is pumped to a reservoir 16 feet deep and holding 1,500,000 gallons. In summer it develops a somewhat stagnant odor and taste. The water is soft, and four miles of distributing mains are used, these being of cast iron dipped, with galvanized iron service pipes. Sixty-two per cent, or about 200 families, use this water for fire, sprinkling, and other purposes, but it is not used at all for drinking, as this water comes from private wells.

TIPPECANOE COUNTY.

Clarks Hill.—No public supply.

Lafayette.—In 1875-76 the city of Lafayette built a public water supply consisting of driven wells 35 feet deep, and 5,000,000 gallons can be pumped in 24 hours. The supply is pumped to a reservoir 28 feet deep and with a capacity of 4,200,000 gallons. The water is hard and 50 miles of cast iron distributing mains are in use, extra strong $\frac{5}{8}$ -inch lead being used for service pipes. The average daily consumption of water is 2,500,000 gallons, and 5,000 families, or 25 per cent. of the population, use this supply. Many private wells are also used.

West Lafayette.—A private company called the West Lafayette Water Works Co., and built in 1893, furnishes this town with its supply, which is taken from driven wells 70 feet deep. A reser-

voir is used which is 50 feet high and about 35 feet in diameter, the water being supplied from this by gravity. Cast iron mains are used and galvanized service pipes. About 500 families use the supply. Private wells are used also.

TIPTON COUNTY.

Tipton.—The city of Tipton built a system of driven wells in 1892, these wells being from 300 to 600 feet deep, the water coming from limestone. This water is pumped into two 20,000 barrel cisterns. The supply flows through 10 miles of cast iron mains, lead and galvanized iron being used for service pipes. About 700 families, or 75 per cent. of the population, use this water. The water is good.

Windfall.—No public supply.

UNION COUNTY.

Liberty.—In 1894 the town of Liberty built a supply, the source of the supply being five springs. These springs are walled in with cement at the surface and piped into a reservoir through a 4-inch galvanized iron pipe. Natural pressure is used. The reservoir is 80x75 feet and 14 feet deep in center. In the latter part of the summer a mossy taste and odor develops. The water is hard. Five miles of mains are used of galvanized iron, iron and lead pipe being used for service pipes. There are about 250 families using this water.

VANDEBURGH COUNTY.

Evansville.—In 1900 Evansville completed new water works with Holly pumps. The supply is taken from the Ohio River, and is pumped direct from intake into the mains. This supply is soft water. Eighty miles of distributing mains of cast iron, with wrought iron galvanized for service pipes, are used. Four thousand families, or 50 per cent., use the supply, 9,000,000 gallons daily being used.

* Gas former present.

VERMILLION COUNTY.

Cayuga.—No public supply.

Dana.—A system of driven and dug wells for use in case of fire and for sprinkling purposes, together with private driven wells is the supply for this town.

Newport.—No public supply.

VIGO COUNTY.

Terre Haute.—A private company called the Terre Haute Water Works Co., and owned by them since 1873, gets its supply from the Wabash River. All sewers discharge below the intake. The water is pumped through filters direct. In the winter the water developed an especially bad woody taste, which is due to plant life in the water. Sixty miles of mains are used, these being of cast iron with a little wrought iron, and lead and galvanized iron service pipes. Probably 40 per cent. of the population use the public supply and 60 per cent. are supplied by private wells.

WABASH COUNTY.

North Manchester.—This town owns a system of flowing wells which was built in 1894. These wells are driven 100 feet deep and are 14 in number, flowing about 55,000 gallons in seven hours. These are driven through clay top soil, gravel and sand below, and the water is pumped to a standpipe 16 feet by 110 feet high, holding approximately 162,000 gallons. The supply is hard. About five miles of distributing mains of iron, with galvanized iron service pipes, are used. Two hundred families, or 25 per cent., use daily 70,000 gallons.

Roann.—No public water supply.

Wabash.—Wabash is supplied with its water by the Wabash Water Co., a private company built in 1886 by Samuel Bullock & Co. The water comes from bored wells 60 feet deep, bored through a layer of very hard blue clay, then into gravel. This is pumped to a standpipe 100 feet high and 25 feet in diameter and covered. The water is medium hard. Twenty-six miles of mains of cast iron, with service pipes of the same, are in use. Fifteen hundred, or 75 per cent. of the families, use about 750,000 gallons per day. There are some private wells on the south, but not on the north side of the city.

WARREN COUNTY.

West Lebanon.—No public water supply.

WARRICK COUNTY.

Boonville.—This city owns an artificial lake 6 to 13 feet in depth, which was built in 1896. The watershed consists of 200 acres with three houses thereon. A standpipe is used and the water is pumped to it. This standpipe is 100 feet high and is 20x30 feet. The water from this supply is soft. Iron on steel is used for the nine miles of distributing mains, and 350 families use the water. There are also many private wells in use.

WASHINGTON COUNTY.

Campbellsburg.—No public supply.

Hardinsburg.—No public water supply.

Livonia.—Private bored wells furnish the supply for this town.

New Pekin.—No public supply.

Salem.—This town has a system of springs which they had built in 1884, and which is owned by Salem. The watershed is 1,000 acres, wooded and cleared and with about 75 inhabitants thereon. The flow from these springs averages 125,000 gallons. The water is hard and the soil is clay, limestone subsoil. A reservoir with a capacity of 60,000 gallons is used. At times the water develops a taste of mud and rotten leaves. After hard rains the water becomes muddy, but this will be remedied soon by improvements. About five miles of mains of iron are used, with gas pipe for service pipes. Four hundred families, or 66 2-3 per cent. of the population, use the supply, and the average daily consumption is 80,000 gallons. A few private wells are used.

WAYNE COUNTY.

Boston.—No public supply.

Cambridge City.—The only public supply Cambridge City has is for sprinkling and fire protection. The taste and appearance of well water used is good, but the nearness of many of the wells to privy vaults is not assuring that in the future the water may not be contaminated.

Centerville.—No public water supply.

Dublin.—Private wells furnish the supply for this town.

Hagerstown.—Private wells from 18 to 105 feet deep furnish the water supply for Hagerstown.

Milton.—No public supply.

Richmond.—The Richmond Water Works Co., a private concern, built in 1884 by S. L. Wiley Construction Co., gets its supply from a well 25 feet deep, drawing 500,000 gallons, with a capacity of 1,000,000 gallons per day, and from a system of gallery wells. This water is piped to a reservoir having a capacity of 8,000,000 gallons. The watershed area is about eight square miles with 12 families living thereon. The water at times has a fishy smell and tastes of old wood. The water is hard. Thirty-eight miles of mains are used, these being of cast iron with lead service pipes. Two thousand families or about 66 2-3 per cent. of the population, use the supply, which consists of about 2,000,000 gallons per day.

Whitewater.—There are two public wells in this town, about 20 feet deep into clay.

WELLS COUNTY.

Bluffton.—In 1884 Bluffton had built a system of driven wells about 500 feet deep. The water is pumped by compressed air into a well 30x60 feet and 30 feet deep, cemented and cleaned annually with the fire hose. The water is hard, and 4.5 miles of distributing mains are used of cast iron having lead pipe $\frac{3}{4}$ -inch in diameter and weighing $2\frac{1}{2}$ pounds. Four hundred and eighty taps, with some others in flats, supply 60 per cent. of the population with 350,000 gallons per day.

Liberty Center.—Private drilled wells from 60 to 160 feet deep supply this town.

Ossian.—No public supply.

Poneto.—No public supply.

WHITE COUNTY.

Brookston.—No public supply.

Monticello.—In 1895 the town of Monticello built a dug well 20 feet deep, having 14 feet of water. The soil is gravel. This well has a brick wall. The water is pumped to a standpipe with a capacity of 126,000 gallons. The water is medium hard. A

† Acid gas formers present. * Gas formers present.

little more than five miles of distributing mains are used, these being of iron. Three hundred families, or 40 per cent., use this supply, and 200,000 gallons per day are consumed. The well is 60 feet below the level of the town, being in the river bottom. The well is 12 feet in diameter and until the last year flowed from outlet five or six feet below surface when not pumped.

Monon.—No public supply.

Wolcott.—No public supply.

WHITLEY COUNTY.

Churubusco.—In 1898 this town had a well bored 385 feet deep, over 100 feet being in rock, by the Seckner Water & Light Co. The water is pumped to a standpipe 100 feet high, 10 feet in diameter and holding 2,000 barrels. At times the water develops an unpleasant taste of dead water, but this is usually when the pipes have not been flushed. Two miles of mains of cast iron distribute the water to the 200 families using it. About 100 per cent. use the supply and 30,000 gallons per day in summer are consumed. A new well is being put in by Miss Josia Kingdom, but the water has not as yet been turned into the mains.

Columbia City.—This city built a system of drilled wells in 1894, these wells being from 200 to 800 feet deep, drilled in rock. The water is pumped to a standpipe by direct pressure. The water is soft and at times tastes of iron. Twelve miles of distributing mains of iron, with lead service pipes, are used in carrying the 400,000 gallons which are used daily by 75 per cent. of the people. About 15 private wells are in use.

South Whitley.—This town built four bored wells in 1896, with an average depth of 50 feet. The water is pumped by direct pressure. The water is hard and at the end of the pipe line has a dead taste, or stagnant. Iron is used for the 2 3-5 miles of mains and lead is used for the service pipes. About 40 families, or 25 per cent., use this supply, and 90,000 gallons per day are consumed.

THE INSPECTION AND CONTROL OF FOOD AND DRUGS.

In the absence of national legislation on the subject it has remained for the several States to solve the problem of pure food as best they might. Inability of the individual State to interfere with interstate commerce has been one of the chief drawbacks to the framing of an entirely satisfactory pure food law. A State can, provided the means are afforded it, regulate the manufacture and sale of all home products. But when all other States are allowing the manufacture of impure goods it becomes an impossibility for any one State to keep such goods from coming over its borders. Notwithstanding this vital defect in the working of any local pure food law, every State has some form of a food law on its statute books.

Pure food laws are a part of the police power of the State, and as such are subject to the broadest interpretation. The extent to which a State may go to protect public health and prevent fraud is indefinable and unlimited. The laws are justified by the unquestioned fundamental right of the State to provide for the protection and preservation of health. Even before the enactment of special food laws, it was an indictable offense to mix anything in the food made and supplied for human consumption which would be unwholesome and deleterious to health, and the wilful adulteration or mixing unwholesome ingredients in foods was considered an act dangerous to the public health and, to life, and constituted a public nuisance.

The State food laws were first intended to prohibit the sale of foods injurious to health. The statutes were strictly drawn for this purpose and the courts have in all instances upheld them. This class of adulteration has been so rigidly restricted that its extent is much less than formerly, except in the case of the use of antiseptics and coloring materials. The contention is made that the use of the extremely small quantities of antiseptics necessary to prevent fermentation and decay in no way imperils the life or health of the consumer. But the courts frequently have held that "It is not the quantity but the nature of the substance which the act prohibits."

By far the greater part of the adulteration of food is not an

attack upon the health of the consumer, but an economic fraud, and consists in forcing upon him without his knowledge products different from what they purport to be, lacking in valuable constituents or made from cheap ingredients so prepared as to counterfeit the genuine article. It is to the suppression of adulterations of this class that most recent legislation has been directed.

The food law under the provisions of which the laboratory is operated dates back only as far as 1899. Earlier than this there had been some food legislation, chiefly of a specific character, but lack of enforcement rendered it of little value. In 1883 the oleomargarine bill was enacted, making it obligatory upon dealers in oleo to label their product. The General Assembly in 1905 re-enacted all food laws passed by earlier legislatures, making such changes therein as were suggested by a committee appointed to revise the code. The present food law of the State was given in full in the annual report of the State Board of Health for 1905, together with the food standards and definitions adopted July 7, 1905, by the State Board of Health. These rulings furnish a definite basis for work in the enforcement of the pure food law. The definitions and standards adopted are those established as official for the United States Government or given in the latest edition of the Pharmacopoeia. The analytical methods employed are the official methods approved and adopted by the Association of Official Agricultural Chemists.

In the absence of any definite information as to the character of the foods and drugs sold in the State, before a proper enforcement of the law could be undertaken, it was necessary to learn of conditions that needed a remedy. In order to get this information, and to be fully advised as to the conditions of the markets throughout the State, the first step taken towards law enforcement was to send out inspectors to every section, for the purpose of taking samples of foods and drugs for analysis, and to spread among manufacturers, wholesalers and retailers of those products, information as to the character of the law, its provisions and intentions. Proper observance of food and drug laws, which are technical in character and the meaning of which is not easily interpreted, can only follow a clear understanding of the law. The inspectors have given much attention to this phase of the work, which is educational rather than corrective, and their results con-

firm the idea that law violation is more often the result of ignorance and unskilful preparation, than of wilful misrepresentation and fraud. During the year, L. W. Bristol, Bert W. Cohn, Chas. Bragg, Wm. McAbee and R. E. Bishop have acted as food and drug inspectors, and have visited nearly all the larger cities and towns of the State at least twice, and in some cases three times. The cities so inspected were Indianapolis, Anderson, Muncie, Ft. Wayne, South Bend, Elkhart, Goshen, Hammond, Michigan City, Whiting, Peru, Marion, Alexandria, Elwood, Noblesville, Lafayette, Crawfordsville, Brazil, Greencastle, Terre Haute, Vincennes, Evansville, New Albany, Madison, Jeffersonville, Washington, Franklin, Edinburg, Martinsville, Bloomington, Richmond, Connersville, Columbus, Covington, Attica, Williamsport, Veedersburg, Hillsboro, Kokomo, Huntington, Huntingburg, Boonville, Salem, Mt. Vernon, Delphi, Logansport, Auburn, Tipton, Plymouth, Rushville, Oakland City, Princeton, Wabash, Laporte, Albion, Valparaiso and Rochester. In addition to the collection of samples for analysis the inspectors made note of the character of the stores and markets visited, and have reported all unclean, filthy or unsanitary places, visited slaughter-houses, and examined into local health conditions.

The results of these investigations are described under the title, "Condition of Groceries, Markets and Slaughter-Houses."

In addition to the regular inspectors who have been engaged entirely in work outside the laboratory, the chemical force has also made frequent inspection trips for the purpose of purchasing samples and investigating unsatisfactory conditions. The cost of inspectors' traveling and hotel expenses and the purchase of samples has been \$1,584.20. The number of samples brought in and analyzed was 5,200; the cost per sample was, therefore, 30.46 cents, a figure which is very low in view of the fact that at least a part of each inspector's time was occupied in other than food and drug work.

Much work has also been done at the laboratory for the purpose of informing wholesalers and manufacturers as to the character of the products they were handling. These samples have been sent to the Laboratory accompanied by proper information as to their source. The results of the analyses which have been furnished the dealers have been heartily appreciated by them, and

have contributed largely in assisting them to remove their stock of adulterated goods and as well have assured them that the quality of new invoices was satisfactory. Manufacturers and wholesalers all over the State have taken advantage of the opportunity the Laboratory has afforded for this work, and have not failed to express their appreciation of the assistance they have received. The Laboratory was opened for work about the 1st of September, 1905, and in this report is enumerated all the work done since that time up to the end of the fiscal year, covering a period of about 14 months. During that time there have been analyzed 3,641 samples of food products, and 1,559 samples of drugs. Of the total number of food products examined 57.7 per cent. have been pure, while of the drug samples 37.5 per cent. have been pure.

The expense of maintaining the Food and Drug Laboratory from September 1, 1905, the time when work was commenced, to October 31, 1906, including salaries of chemists, clerk and janitor, laundry bills, sundry drug bills, apparatus to replace breakage during the year, postage, etc., was \$4,588.43. The total number of food and drug samples analyzed was 5,200, thus making the cost per sample 88.24 cents. The total cost per sample for collection and analysis was \$1.187. Included in this estimate are many expenses that were not actually incurred in the food and drug work. For instance, much of the office work consists in answering queries and sending out information concerning the food and drug laws, and much of the time of the chemist is occupied in executive rather than in analytical and inspection work.

The following summary gives in detail the character and variety of the work done and the analytical results:

PERCENTAGE OF ADULTERATION OF FOOD PRODUCTS IN INDIANA

YEAR ENDING OCTOBER 31 1906

It has been the custom of the Laboratory to publish from time to time in the Monthly Bulletin of the State Board of Health summaries of the work, giving names of dealers and manufacturers of products both good and adulterated. The press of the State has also given wide publicity to the results of the Laboratory in frequent popular articles, and as well by occasionally reporting in full the results, has contributed largely to a better understanding of what the Food and Drug Law is, and of the conditions of the markets which make its enforcement necessary. The Bulletin has also been distributed widely among manufacturers, wholesalers, retailers and the public, and has served to convey much information as to the character of the food and drugs sold. The health officers of many cities and towns have acted as food and drug inspectors and have devoted much attention to the quality of the goods sold in their cities. The cities of Indianapolis, South Bend, Ft. Wayne, Crawfordsville, Terre Haute, Evansville, Noblesville, Newcastle and Columbus have done valuable work, particularly in controlling the quality of their milk supply. It is, of course, very desirable that every city have its own milk inspector and a properly equipped laboratory where the necessary analytical work may be done. In the absence of such facilities, however, the State Laboratory endeavors to assist local authorities, and has furnished material help in many instances.

MILK.

During the fall of 1905 our inspectors visited most of the larger cities and towns and collected samples of milk which were shipped to the Laboratory for analysis. The quality of the milk supplies thus investigated was found to be good. In only a few instances did it appear that preservatives or coloring matter had been used. The results of the examination show that of the 461 samples analyzed 368 were pure and 93 were adulterated. These figures do not express the true character of the milk, however, so far as wilful violation of the law is concerned, for most of the milks reported as adulterated were so classed because they contained a slightly lower fat content than that required by law, and not because they bore evidence of having been skimmed or watered. The control of the purity of a milk supply by Laboratory methods is satisfactory in so far as it insures the sale of milk of

standard composition, free from added water, color and preservatives. But it does not guard against unsanitary conditions of production and handling that are of far more importance to the public health than the frauds practiced by unscrupulous dealers. The healthfulness of the cows, well kept dairies, and suitable appliances for cooling and marketing milk before it becomes the host of myriads of abnormal bacteria, are factors which can not be neglected if a city's milk supply is to be kept clean and wholesome. It is obvious that State inspection of dairies can not well be undertaken. The State can not keep a host of inspectors to cover 36,000 square miles nor control the conditions of thousands of dairies. Such work should be the duty of sanitary officers ap-

pointed for the purpose by each city. Several cities of the State have already undertaken such inspection and report that at the beginning of the work but few dairies were found that were properly arranged and handled. Indianapolis is requiring of its milk dealers the observance of scrupulous cleanliness about the barn and milkhouse, and milk inspectors make frequent inspections to see that the regulations are lived up to by the producers. New Albany has recently adopted a comprehensive milk inspection ordinance that may well be adopted by other cities. It differs from the usual ordinance in that no license fee is charged the dairyman for his permit to sell his produce. Instead he pays a veterinarian for inspecting his herd at least four times a year. This the dairyman is usually willing to do, for such inspection is now a part of the routine of successful dairying.

CREAM.

Of the 48 samples of cream examined, 19, or 39.5 per cent., were classed as adulterated. The standard fat content of cream is 18 per cent., and it is apparent from the results obtained that many dealers put out cream containing much less than that. One sample examined contained only 4 per cent. of fat and was in truth nothing more than a rich milk. We have found no evidence of cream thickeners, gelatine compounds, etc., having been used.

BUTTER.

Of the samples of butter analyzed 27 have been good and 11 adulterated. The condition of the butter market is worthy of serious attention. A single inspection of the city market of Indianapolis showed that of nine samples of so called "dairy butter" purchased, six were oleomargarine. Several of the samples so sold were wrapped in brown paper which when taken from the butter was found to bear the stamp "oleomargarine." It is evident that the dealers using such a stamp were doing it only for the purpose of complying with the regulations of the Internal Revenue Department, rather than to give any information as to the article purchased. The stamp was nearly illegible and so placed as to be entirely hidden from the purchaser. The addition of the word "oleomargarine" in such a fashion does not, however, comply

with the Government regulations. The regulations for the sale of oleomargarine by retail dealers as laid down by the Internal Revenue Department are as follows:

"Each retailer's wooden or paper package must have the name and address of the dealer printed or branded thereon, likewise the words 'pound' and 'oleomargarine' in letters not less than one-quarter of an inch square, and the quantity written, printed or branded thereon in figures of the same size (one-quarter of an inch square), substantially as follows:

1
 2
 3

[1½] pound	1. Here give dealer's name.
Oleomargarine.	2. Here give street number.
(Letters ¼-in. sq.)	3. Here give name of city or town."

"The words 'oleomargarine' and 'pound,' which are required to be printed or branded on retailer's wooden or paper package, in letters not less than one-quarter of an inch square, and the quantity which is required to be written, printed, or branded thereon in figures of like size, must be so placed as to be plainly visible to the purchaser at the time of delivery to him. Illegible or concealed marks and brands are not those contemplated and required by the law and regulations. It will not be deemed a compliance with this regulation if the word 'oleomargarine' and the other required words and figures shall be illegibly branded or printed or so placed as to be concealed from view, by being on the inside of the package, or by folding in the stamped portion of the paper sheet used for wrapping or otherwise. The required words and figures must be legibly printed or branded and conspicuously placed, and no other word or business card should be placed in such juxtaposition thereto as to divert attention from the fact that the contents of the package are wholly oleomargarine.

"The foregoing regulations relative to the marking or branding of retail packages apply equally to sales of colored and uncolored oleomargarine.

"The color of the ink with which the words are printed must be in the strongest contrast to the color of the package."

We have never yet purchased oleomargarine as such or under

the disguised name of "dairy butter" that was properly marked. The dealers stoutly maintain their rights to sell oleomargarine under fancy names. They insist that it is called "dairy butter" by the trade; that, in fact, long continued usage authorizes the sale of oleomargarine when dairy butter is called for. The phrases "Country Roll," "Jersey Roll," etc., are also applied to oleomargarine. Of course, such misleading terms are used only to deceive the customer and promote the sale of oleomargarine. There is no contention nowadays that oleomargarine is not as wholesome as butter; the illegality of its sale consists in the fact that the retailer purchasing it for 15 cents a pound or less, is able by selling it as butter to make an enormous profit.

Within recent years a very large business has been built up in the manufacture and sale of so-called renovated butter. Renovated butter is made from butters that are unsalable because of their appearance, odor, rancidity and general unfitness for consumption. Renovated butter stock is collected throughout the country much as soap grease is collected. It is hauled to some central depot and there melted, strained, treated with acids or alkali or blown with steam until it is deodorized and its rancidity is removed. The butter is then re churned, usually with milk, and worked up into salable form. The better grades of renovated butter are of fine appearance and of good quality, and large amounts of renovated butter are manufactured yearly, and yet after frequent inquiry of dealers in butter we fail to find that the renovated article is ever sold. It undoubtedly comes to market as creamery butter, and the extent of the imposition practiced by butter dealers or house to house vendors must be very great.

CHEESE.

Of the 19 cheeses analyzed all have been pure. The use of preservatives is not uncommon in soft cheese, such as the so-called "Neufchatel" or cream mixtures, but on the whole we find but little evidence of adulteration in this dairy product.

CONDENSED MILK.

Condensed milk is made by evaporating milk to one-half or one-third its original volume and adding cane sugar. In reporting the results of the analysis of the samples examined, we have given the amount of fat present in the sample and also the amount of fat present in the original milk. The results show that every sample but one examined, was made from normal whole milk; no preservatives were present. Several samples of so-called evaporated cream were analyzed, but proved to be simply whole milk evaporated to a creamlike consistency. Aside from this resemblance they were in nowise condensed cream. Under the new food law this misleading term or name will be abandoned and the product will be sold for what it is, simply evaporated milk.

ICE CREAM.

The product sold as ice cream is of varying composition, the basis of which is a cream or milk mixture flavored and frozen. Genuine ice cream should be made wholly of cream, properly flavored. Such a mixture will not remain in a solid condition long, and the practice of adding some solidifier such as gelatin or gum tragacanth has become common among dealers. Starch may also be employed as a thickener. The U. S. Department of Agriculture standard for ice cream requires that at least 14 per cent. of butter fat be present. Under this standard none of the six samples of ice cream analyzed were pure. Three contained large quantities of gelatin.

BAKING POWDER.

Baking powder is a leavening agent now in general use which has taken the place of the cream of tartar and saleratus mixture formerly employed in raising bread. It acts in the same manner as the older preparation and leavens the bread by the formation within the loaf of carbon dioxid. Baking powder is composed of acid and alkaline constituents so prepared that when brought into contact with water a chemical reaction takes place between the acid and alkaline carbonate with the resulting liberation of carbon dioxid.

The value of a baking powder depends, therefore, on the amount of gas liberated in the process of bread making. A good powder is one so compounded that the acid salt, which may be bitartrate of potassium, calcium acid phosphate, or alum, is present in just the quantity required to set free all of the carbon dioxid in the bicarbonate of soda, the alkali usually used. Normal baking powders will give 10 per cent. and over of their weight as gas. All powders producing less gas are deficient either because of deterioration by age or improper compounding.

In reporting the results we have given the percentage of carbon dioxid capable of being liberated in the process of baking, and have also designated the character of the powder. Several of the samples were not of the composition claimed for them and a large number, 26, or 54.1 per cent., were low in carbon dioxid. Probably many of the powders classed as illegal were up to the standard when packed, but had deteriorated with age. This can not be taken into consideration, however, either by the housewife or the chemist, and it becomes the duty of the manufacturer to recall his stock before it is so old as to be worthless. One sample

contained less than 2 per cent. of available carbon dioxid, and a cook using this powder would have to employ at least 20 teaspoonfuls to the quart of flour.

*Samples were old stock and had undoubtedly deteriorated with age as analyses of fresh goods showed them to be well above the legal standard.

CREAM OF TARTAR.

Potassium bitartrate, ordinarily known as cream of tartar, is the agent once much used together with sodium bicarbonate or cooking soda, for leavening bread, biscuit, etc. The development of the modern baking powder has largely diminished the use of cream of tartar and now but small quantities are sold. During the year we have examined 256 samples of cream of tartar, collected for the most part from drug stores, of which 248, or 96.9 per cent., of the samples were pure. This condition is somewhat surprising in view of the fact that cream of tartar was formerly one of the most heavily adulterated food products. All of the adulterated samples were bought at grocery stores and consisted of mixtures of alum, gypsum and starch. One of the samples was so carefully compounded that its acidity was exactly that of normal cream of tartar. Other samples were poorly made, and one was so low in acidity that it had no value as a liberator of carbon dioxid.

COFFEE.

Of the 23 coffee samples analyzed, 15 have been pure and eight were classed as adulterated because of the use of facings or the admixture of chicory and roasted cereals. The adulteration of coffee is now rarely practiced, since the introduction of the cheap Brazilian and Central American products which sell as low as seven cents a pound does away with the necessity of artificial coffee substitutes. Coffee is faced or coated by some manufacturers for the purpose, as they claim, of retaining the aroma of the coffee. Such treatment, however, is more frequently employed to make a low grade coffee look like a better article. The facing or polishing of coffee with sugars, water, albumen or any other preparation, is illegal. But one sample, and that a package coffee, contained chicory. The chief fraud of the coffee trade consists in the sale of inferior grades for the more desirable higher priced berry. The amount of Mocha coffee imported from Arabia each year is but a tithe of the coffee sold as Mocha. The same is true of Java coffees. It is probably true that almost all of the so-called Mocha and Java coffees on the market are nothing but the better grades of Central American coffees.

CHOCOLATE AND COCOAS.

Cocoa and chocolate are preparations made from the cocoa bean. The ground kernel of the cocoa bean is known as chocolate. When a portion of the cocoa butter or fat of the bean is removed by pressure, the resulting product is called cocoa. Chocolate and cocoa are adulterated by the admixture of starches, such as arrow-root, wheat and corn starch, or by the use of cocoa shells. Of the 28 samples of cocoa analyzed 22 were pure and six were adulterated. Of the chocolates 21 were pure and two were adulterated. Several samples of sweet chocolate prepared in cake form as a confection contained added starch. One cocoa sample contained a large excess of cocoa shells.

TEAS.

But few teas were examined and these were all pure, if we except the addition of coloring matter usually known as facing. The Board of Tea Experts of the Treasury Department which has fixed the standard of purity, quality and fitness for consump-

tion of tea imported into the United States, allows the importation of teas which have a minimum amount of coloring substances not deemed unwholesome or deleterious to the consumer. In line with this decision we have not classified faced teas as adulterated.

LEMON EXTRACTS.

In the analysis of lemon essences or extracts we have required that at least five per cent. of pure lemon oil should be present. Many terpeneless lemon extracts are sold as pure extracts, but as they contain no lemon oil, or are made from oils from which the terpenes have been removed, they must be considered to be adulterated. The sale of compound lemon extract is not allowable. The value of an extract for flavoring purposes depends upon the amount of pure lemon oil present, and the compounding of oil of lemon grass, citral and dilute alcohol makes a fraudulent product.

The action of certain manufacturers of flavoring extracts in attempting to override the standard which we have adopted for lemon extract by claiming that their products made from citral, or with a "washed out oil," are pure lemon extract, and therefore not adulterated, calls for special attention on the part of wholesalers and retailers to the fact that our standard for lemon extract reads as follows:

"Lemon extract shall contain at least five per cent. of the pure oil of lemon dissolved in alcohol."

Under this ruling, which is in accordance with the standard set by the United States government and by all the States that have adopted a standard, the extracts made from the "terpeneless" lemon oil and from "washed out oil" must be considered to be adulterated. While oil of lemon owes much of its characteristic aroma to citral, it is none the less true that lemon extract, as we know it, does not depend for its flavor on the citral alone, but that its character is influenced to a considerable degree by the terpenes present in normal oil of lemon. Limonene, the chief terpene of lemon oil, is an essential constituent, and when blended with the citral gives the true flavor of lemon.

To claim that extract made from citral and "washed out oil" is made from lemon oil is as fallacious as the statements of the vinegar manufacturer that his compound of acetic acid, water and color is cider vinegar because the acetic acid is present.

Terpenless extracts ~~can~~ legally be sold if they are so labeled, but when lemon extract is ordered, only the standard article should be supplied.

The results of our analyses show that but few pure goods are sold, and that most of the so-called lemon extracts are inferior substitutes, of little value to the housewife. We found but 56 pure extracts out of 343 examined, while 287, or 83.7 per cent., were either low in lemon oil, contained no lemon oil at all, or were artificially colored with yellow dyes.

VANILLA EXTRACTS.

We have examined 189 samples of vanilla extract, and found 53 to be pure and 136, or 71.9 per cent., adulterated or below standard. Many druggists' samples were made from the vanilla bean, but because of faulty methods of preparation are low in vanillin content and must therefore be classed as impure. A true vanilla extract is made by macerating the vanilla bean with sugar and extracting the mass with diluted alcohol. Adulteration of vanilla extract consists of substituting, wholly or in part, the inferior and cheaper Tonka bean for the vanilla bean, or the addi-

tion of the artificial coumarin to weak extracts of the true bean, or even preparing solutions of artificial vanillin or artificial coumarin in dilute alcohol, colored with caramel or coal tar dye to represent the true extract.

Extract of Tonka has a decided value as a flavoring medium, and if compounded with extract of vanilla, can be sold if labelled "Extract of Vanilla and Tonka."

MISCELLANEOUS FLAVORING EXTRACTS.

Under this head we have classed a variety of products occasionally used for flavoring cakes, confections and dessert preparations.

But four out of twenty-four samples examined were legal. In most cases the goods were misbranded or improperly labeled, most of the pineapple, banana, strawberry, raspberry, peach extracts, etc., being sold as pure fruit extracts.

As a matter of fact it is impossible to make them from the fruits, and they must be made from solution in alcohol of synthetic organic preparations known as compound ethers. Some of the compound ethers possess a remarkable resemblance to fruits. Butyric ether has a distinct pineapple flavor, and a mixture of amyl acetate and butyric ether counterfeits very closely the flavor of the banana.

If these extracts are marked "Artificial Fruit Flavors" they can be legally sold.

HONEY.

Of the 35 samples of honey analyzed but six, or 17.1 per cent., were impure. Comb honey is not subject to adulteration, but strained honey is frequently mixed with glucose or sugar syrup. We have found some samples purporting to be pure "White Clover" honey and containing a piece of honey comb, to be nothing but glucose syrup.

MAPLE SYRUP.

No other articles come to our tables under such false colors as do maple syrup and sugar. The results of the analyses of 54 well known brands indicate that the real maple syrup rarely or never is procurable and that the syrup sold under that name is a product of the cane instead of the sugar maple. The high price which maple syrup commands because of its peculiar flavor has led manufacturers to prepare all sorts of imitation goods, and the great demand, largely in excess of the normal supply, enables them to sell their spurious products at the price of the true article. Cane syrup, made by dissolving cane sugar in water, is colored with caramel, a burnt sugar, and flavored with decoctions of corn cobs, hickory bark or maple chips and sold to the public under the name of "Fancy Vermont Maple Syrup." Several samples

analyzed have contained glucose syrup, one brand containing over 50 per cent. Maple products, although owing their sweetness to sucrose, the same sugar that is produced by sugar cane or the sugar beet, possess a peculiar aromatic odor and delicious flavor, which renders them much more valuable than ordinary cane sugar products. Since it is this characteristic which fixes the price and creates the demand, as well as furnishes a valuable product for the farmer, we insist that all syrup or sugar sold as maple shall be pure. No compounds of cane and maple can be sold unless marked "cane and maple," with the percentage of each ingredient, and all goods sold as "syrup" in packages bearing pictures of maple grocers or sugar houses shall be considered to be intentionally misleading and misbranded.

MOLASSES.

Molasses is made from the juice of cane or other sugar producing plants, and is commonly understood to be the liquid material draining from granulated sugar made from sugar cane, either by natural percolation or by being treated in centrifugal machines. The commercial term, molasses, however, applies to other syrups, including that made from sorghum. The perfection of sugar making processes has increased the amount of cane sugar obtainable from a given quantity of juice and consequently diminished the molasses residue.

With the diminishing of the quantity the quality of the molasses has also depreciated until frequently it is unsuitable for table use. It has become a common custom, for that reason, to add glucose, or corn syrup, to these dark, strong residuums, and thereby produce a lighter colored and more attractive syrup, of finer body and flavor.

While this addition produces an article of increased value from a commercial standpoint, the use of glucose in improving the grade of molasses is considered by all authorities to be an adulteration, and is prohibited by our law, unless goods so blended are properly branded.

SORGHUM MOLASSES.

Sorghum molasses is made by evaporating sorghum juice to the required consistency. Most of the product on the market is made in a small way by concentrating in open pans. None of the sugar is removed because of the difficulty with which it can be freed from the starches and uncrystallizable sugar. Sorghum syrup, because of the presence of large quantities of saccharine matter, is very liable to ferment, and the use of preservatives to check fermentation is not uncommon. We have recently had occasion to examine a sample of sorghum syrup which was preserved with boric acid and beta naphthol, and also contained whiting as a filler. Much glucose is used with sorghum syrup. Some samples examined contained as high as 80 per cent. Six of the 16 samples examined were adulterated.

MEAT PRODUCTS, STEAKS, SAUSAGES, PRESSED MEATS, ETC.

Considerable work has been done in investigating the quality of the fresh prepared meats sold on our markets. Samples sent in by our inspectors from different cities show a decided difference in composition so far as the use of preservatives is concerned. The dealers of certain cities evidently have relied entirely upon borax, and in other places they have used sulfites as preservatives. Collections of meat from the Indianapolis city markets showed an almost universal use of sodium sulfite in chopped meat.

Of twenty-one samples of Hamburger steak, which is prepared by mincing scraps of beef, eighteen contained sulfites, which, calculated as sodium sulfite, the salt usually used, ranged in amount from .015 per cent. to .501 per cent.

The sulfites are used for two reasons; they are preservatives and they act as colorants by preserving the color of the blood corpuscles by forming oxyhaemaglobin, which is of a bright red color. They are the most dangerous of all the preservatives used in food products, not only because of their physiological action on the individual, but because they possess the property of masking the odor and appearance of decay so that putrefaction, usually intelligible to the senses, is not noticed until the meat is in an advanced stage of decomposition. Sulfurous acid, or sulfites, produce a marked toxic effect on the individual, even in doses as small as are employed in preparing meats, and even when their inhibition is not attended by apparent ill effect, it is probable that they may produce kidney lesions of a serious character. Their use is absolutely prohibited by the German government and by the new national food laws of this country.

The claim by the users of these preservatives that it is impossible to do without them and that their abandonment would injure business is a specious argument, and endangers the public health. The use of proper precaution in handling meats, coupled with a realization that meat so aged that its odor and evidences of decay must be masked to appear presentable is not fit food for human consumption, will make it possible for the public to obtain wholesome provisions.

It is probable that many dealers who resort to the use of preservatives do so under the impression that they are not injurious

to health. This belief is fostered by the fact that they see no ill effects following their use in their customers (a fact, however, which a physiologist and post mortem can alone determine), and the extravagant claims for healthfulness advanced by the manufacturers of these vicious products.

As the result of the revelations at the city market legal proceedings were instituted against 30 of the dealers selling goods containing sodium sulfite, and by agreement of counsel for the county and the defendant, one case only was tried. The results of this trial, which extended over a week and which was bitterly fought by the defendant with the assistance of Chicago lawyers and the president of the company manufacturing the preservative used, was that the jury disagreed. The outcome of the case, however, was that of a victory for the State, since by the advice of their counsel the dealers in meats throughout the city abandoned at once the use of sulfites or other illegal meat preservatives. Later examinations of meats sold throughout the city show invariably the absence of sulfites. For a time much complaint was heard that meats could not be kept without them, but as the dealers became accustomed to the handling of their meats they found that they had no difficulty in keeping them fresh and attractive even when no chemical preservatives were employed.

Preservatives, whether they be called Preservaline, Antisour, or by any other name, are illegal. The only preservative agents permissible in the curing of meats are salt, saltpeter, wood smoke, vinegar, sugar and spices.

3777	Frankfurters,			
	Bratwurst.....	Gabriel Triat Co., Frankfurt-on-Main.	Indianapolis.	Preserved with Borax.

LARD AND LARD COMPOUNDS.

Our analyses have shown that much of the lard known as lard or pure leaf lard, contains beef stearine, put in to raise its melting point and thereby stiffen it. Pure lard must be made from the melted fat of the hog and contain no added ingredients; the incorporation of beef stearine or lamb suet constitutes an adulteration. The compounds made from cottonseed oil and beef stearine are wholesome products, but such goods must be sold for what they are and not as lards. Under the operation of the Federal Meat In-

spection Law, the addition of not to exceed 4 per cent. of lard stearine will be allowed. This ruling will be followed in this State.

Of the 42 samples of lard examined during the year, 27 have been passed as pure, while 15, or 35.6 per cent., have been adulterated, either by the addition of cottonseed oil or beef stearine.

LARD—LEGAL.

OLIVE OIL.

Olive oil is the expressed oil of the mature fruit of the cultivated olive tree, and must be free from admixtures of other vegetable or animal oils. Until within recent years it has been difficult to purchase pure olive oil, but at present there is little oil imported that is not genuine. Our work shows, however, that many of the oils on the Indiana market are adulterated with cottonseed or peanut oil. Of the 188 samples examined 56, or 29.8 per cent., were adulterated. Many of these adulterated goods were pure cottonseed oil, prepared and bottled in this country under a foreign label, that of "E. Loubon et Cie, Nice," being most commonly used. Many of the druggists' samples of olive oil have been found to be pure cottonseed oil, otherwise known to the drug trade as "sweet oil." One sample marked "Pure Olive Oil," bore the following label: "Those using olive oil should be very careful to discriminate between the medicinal olive oil and the impure sweet oil, which on account of its impurities is only used for external and mechanical uses." And yet the sample was nothing but the sweet oil the customer is cautioned against using.

PRESERVED FRUITS, JELLIES AND JAMS.

Under this heading is put all products made from fruit and sugar, either cane or glucose, and including fruit butters, fruit preserves, fruit jellies and jams, etc.

The base of the imitation fruit jelly, jam, etc., is apple juice or apple pulp, obtained principally from the waste parings and cores of the apple drying or evaporated apple factory. These waste products are partially dried at the factory, packed in bales or barrels, and shipped to the manufacturer of fruit products at a very low cost. Upon arriving at the factory the stock is boiled for a time in open kettles and then placed in large closed copper kettles and heated by blowing with superheated steam until the clear apple juice drains out of the mass to the bottom of the kettle. It is then drawn off into tanks and serves as stock for making all varieties of jellies and preserved fruits.

For the production of a satisfactory jelly or jam large quantities of sugar are necessary for jellifying and preserving the fruit. The cost of this sugar contributes largely to the cost of manufacture. Cheaper sugars in the form of glucose and glucose syrup are therefore employed as a substitute for cane sugar. Glucose is a wholesome and nutritious article of food, and no objection can be made to its use except that products containing it are sold at prices not warranted by their actual cost. In some cases saccharin, a coal tar product of no food value but of great sweetening power, is used where a very sweet article is desired. Saccharin

has antiseptic properties which make its use profitable. Its influence on the system is not determined and its employment is not allowable.

The apple juice and glucose syrup are mixed in the necessary proportions, colored with a coal tar dye to counterfeit the genuine product; flavored with compound ethers, synthetic fruit ethers, technically known as ethyl buterate, amyl acetate, etc.; preserved by the addition of benzoate of soda or salicylate of soda, and ultimately placed upon the market as pure currant, raspberry, or strawberry jelly.

Foreign coloring matter is employed in preparing fruit products for two reasons: one is that the color of fruit is not very stable and is liable to be destroyed during the process of preserving, and, furthermore, that goods packed in glass will lose their color when constantly exposed to the light on the grocer's shelves. The other reason for the use of dye colors is that they enable the manufacturer to use fruit of deficient color and thus to conceal inferiority. Apple stock uncolored is readily distinguished, but when dyed a brilliant crimson passes to the eye of the inexperienced buyer for the genuine fruit color. The preservation of this color is important, as the value of the jelly or jam for table use or in the sick room is doubtless enhanced by the attractiveness of its coloring, but the possibility for deception as to quality and purity afforded by the use of coloring matter overbalances any argument in its favor. By the judicious use of coal tar colors apple jellies flavored with small quantities of the true fruit, or by the artificial fruit ethers, can be given the appearance of the genuine article, or a cheap fruit or a vegetable pulp can be mixed into a jam, and jellies made from glucose and starch may be served to consumers who demand pure goods.

The harmfulness of the coal tar dyes depends on their composition. Many of them are quite innocuous, but are always liable to contain metallic impurities, such as zinc, copper, tin, lead, and arsenic retained during the process of manufacture. Others are distinctly injurious and entirely unsuitable for use in food products.

The cheap food products have undoubtedly become a necessity in the homes of the poor, where they have supplanted, to a large degree, more costly forms of food. But the apparent demand for

low-priced food does not amount to a license to the manufacturer to place adulterated goods on our market nor authorize him to lower, still further, the cost of production by making entirely fraudulent articles that would not command a sale at any price if honestly labeled and sold for what they were.

The custom of labeling jellies made from apple stock with some trade name that does not in any way lead the purchaser to suppose he is getting something which he is not is becoming more common. The sale of the cheap and wholesome apple jellies is thus placed on an honest basis and relieves the trade of the responsibility incurred by meeting the demand for cheap goods with base imitations.

Compound fruit products can legally be sold if they are labeled "Fruit Jellies" instead of "Currant," "Strawberry" jellies, etc. and if they bear a formula correctly stating the name and percentage of the ingredients used in their production. Of the 119 samples examined 97, or 81.5 per cent., have been illegal. Some of these goods were meant to be the pure article, but the majority of them were imitations. In many instances the manufacturer had evidently attempted to mark properly his goods, but notwithstanding this he had failed to comply with all the details of the labeling clause.

CANNED GOODS. VEGETABLES.

One of the leading staples of the modern grocery store and an essential of every well-stocked larder is an assortment of canned vegetables. These goods are put up in tin and sterilized by heat and will keep indefinitely in any climate, thus providing the table with apparently fresh vegetables when they are long out of season or can not be obtained. Of the 20 samples of sweet corn analyzed, 15 were pure, free from preservatives, saccharin or bleach. Four contained saccharin and one sample was a field corn boiled until soft and mixed with corn meal gruel. It was solid in the can and possessed none of the qualities of a sweet corn.

Canners and packers are accustomed to regulate the value of their output by increasing or diminishing the quantity of water in which the goods are packed. The least quantity of water found was 61 per cent. and the largest amount 82.6 per cent. That is, the first sample contained 39 per cent. of solid matter, the second 17.4 per cent., or less than one-half as much. The weight of the contents of the cans varied from 567 to 616 grams.

Of the ten samples of canned peas examined five were pure and five adulterated. One sample was a "soaked" pea, that is, made by swelling up dried peas and canning them as fresh, though it is obvious that goods so packed lack the fresh, succulent flavor which makes the vegetable desirable.

Four samples contained saccharin. Some years ago saccharin was extensively used by packers, but at present no up-to-date house relies on this coal tar sweetener as a substitute for sugar. None of the peas were colored with salts of copper. The use of copper in greenening vegetables is not an American trick and most of the goods so colored are of French origin.

All of the canned tomatoes were pure, free from added color and preservative.

Two of the three baked beans were pure. One contained saccharin. The same ratio of adulteration was found in the canned beans, one sample of which was sweetened with saccharin.

Four of the six samples of mushrooms were illegal, two because of the presence of sulphurous acid, one because it was sour and one sample consisted of pieces and stems.

Two of the five samples of asparagus contained small quantities of sulphurous acid.

SPICES.

At the time of the opening of the Laboratory, if the statements of wholesalers in spices are to be believed, the Indiana public did not know the character of pure spices, and was only content when supplied with imitation goods which contained so much starch, ground cocoanut shells and sawdust that the most susceptible palate would not respond unless tempted with teaspoonful doses.

We were informed that if pure, full strength goods were sold, the consumer would return them because their strong characteristic flavor excited his suspicions.

The results of the examination of 248 samples of spices corroborated in a measure this statement of the trade.

In the January Bulletin of this year we said:

"Of 68 samples of ground cloves purchased from drug stores 22, or 32.4 per cent., were adulterated by reason of added cocoanut shells, dirt, etc., while of 52 samples collected from grocery stores 25, or 48.1 per cent., were impure.

"One sample of ground cloves consisted of wheat starch, cayenne pepper and a small amount of cloves, and other samples were almost entirely cocoanut shells.

"Twenty-three samples of ground mustard were examined and seven proved to be grossly adulterated with wheat or corn starch colored with turmeric.

"Seven samples of capsicum, or cayenne pepper, out of 22 examined were adulterated.

"But the pepper samples were most heavily adulterated and of 84 samples analyzed 47, or 55.9 per cent., were impure.

"Ground olive stones are evidently the chief adulterant, although the various starches are much used. Some samples contained ground olive stones, wheat and buckwheat flour, together with a small percentage of pepper."

Our analyses of spices collected the summer following the opening of the Laboratory showed a very great difference in the quality of the spices sold; but six of 52 black peppers and one of 35 cloves were impure. This remarkable improvement is due to the position taken by the wholesalers and spice grinders of Indiana, who since the publication of our first analyses have refused to handle other than pure goods. Their repeated statement that the

spice business has never been better than during the last year is a sufficient denial of their former argument that pure spices were not in demand by their customers.

It is only fair to the manufacturers to say that the analyses following were made on old goods, probably put in stock by the retailer before the pure food law went into actual effect.

TOMATO CATSUPS.

We have examined 75 samples of tomato catsup and found 67, or 89.3 per cent., to be adulterated. The adulteration in many instances was due to the use of benzoate of soda as a preservative without declaring the fact on the label. Other samples contained coal-tar dye or an excess of starch. Under the ruling of the State Board of Health one-tenth of one per cent. of benzoate of soda can

be used in making tomato catsup if the fact of its presence is stated on the label, but coal-tar dye or other dye is not allowable. Tomato catsup naturally made is brown in color, and the unnatural desire on the part of the consumer for a highly colored product, together with the fact that the use of color made it possible to employ green and inferior stock, induced the manufacturer to resort to artificial color. At the present time, however, the public taste has completely changed, and all high grade catsups are now sold uncolored. The use of starch as a filler and of saccharin as a sweetener is both illegal and unnecessary. Several bottles of artificial goods bore a compound label which was pasted directly on the bottom of the package in such a way that its presence would not likely be detected. Such labeling is an evasion of the law as the goods might as well bear no label whatever.

BEERS, WINES AND SUMMER DRINKS.

While certain classes of beverages, notably those containing greater or less quantities of alcohol, are consumed throughout the year, during the hot summer months the people demand a light, refreshing, attractive beverage that is not consumed at other seasons. In the summer months, too, the consumption of malt liquors is largely increased. The number and variety of the summer drinks is very large. For the most part they are produced by bottlers and dealers who supply the local market, although certain of the fruit juices have obtained a widespread sale through-

out the country. In order to determine the purity of these summer drinks we have collected and analyzed many samples of the products sold on the Indianapolis market. The results of our analyses follow the remarks under each class described below.

BEER.

The production of malt liquors in this country as an industry is second only in importance to the production of breadstuffs. Their consumption is steadily on the increase, as is also the amount consumed in proportion to other kinds of alcoholic beverages. Beer is prepared largely from malted grain, usually barley, although other substances, such as corn, rice and glucose, frequently enter into its composition. Properly defined, beer is a beverage produced by alcoholic fermentation from a hopped infusion, either of malted cereals, preferably malted barley exclusively, or with the addition of unmalted or prepared cereals. Besides the malt and sugars which enter into the composition of beer, and which, in the form of infusions, are converted by yeast into alcohol, hops are also employed to give a palatable bitter to the product. Besides the malt or some fermentable sugar and the hops no other constituent should be present. The chemical composition of the finished product is, however, very complex, the principal constituents being alcohol, various sugars and carbohydrates, nitrogenous matter, carbonic, acetic, succinic, lactic, malic, and tannic acids, bitter and resinous extractive matter from the hops, glycerine and various mineral constituents, consisting mainly of phosphates of the alkalies and alkali earths.

The names given to different kinds of malt liquors relate to various attributes, as the country where they were produced, as English, German, Bavarian beer, etc. Thus porter is simply a beer of high percentage of alcohol and made from malt dried at a somewhat high temperature, which gives it its dark color. Ale is a pale beer, likewise of high attenuation and made of pale malt, with more hop extract than porter. Stout has less alcohol and more extract and still less hops than porter. These terms are used chiefly with reference to English malt liquors. The terms used for German beers, such as Erlanger, Munchener, etc., are for the most part names of places, and are applied to beers made in im-

itation of the beers originally brewed in those cities. Export beer is beer that is specially prepared with a view to long-keeping qualities.

The analyses made at this Laboratory comprise 27 samples, this number being about all of the different brands and varieties of beer obtainable in Indianapolis. The analyses were made principally for the purpose of determining the extent and nature of their adulteration or the use of antiseptic and preservative agents. As a basis for determining adulteration, however, it is necessary to know the chemical composition of the sample, and for that reason a complete analyses of all the beers has been made. Results of the analyses show very little adulteration either in imported or domestic beers. Several of the samples examined, namely, Nos. 4349, 4355, 4358 and 4359, contain sulphurous acid or sulphites; none contained benzoic or salicylic acids, and but one sample, which was a Weiss beer, contained saccharin. An examination of the tabulated results shows that none of the beers departed widely in composition from the normal products. The imported beers have a high alcohol and extract content, and were brewed from a much heavier wort than were the domestic beers. From a chemical standpoint the domestic beers were very uniform in composition, there being no great difference in either the alcohol or extract content.

MALT EXTRACTS.

True malt extract is a syrupy fluid made by extracting and digesting coarsely powdered malt with water and evaporating the strained liquid to the consistency of thick syrup. Such an extract contains at least 70 per cent. of maltose and converts starch very rapidly. At the present there are on the market a very large number of so-called malt extracts which are widely advertised as a tonic and nonintoxicating malt food. These extracts are, for the most part, simply heavy beers, containing considerable quantities of alcohol and extract and no diastase. Two of the three samples of so-called malt extract examined contained 5 per cent. of alcohol each and 8 per cent. and over of extract, largely maltose. In other respects the samples were merely heavy beers. The third sample analyzed was of quite different composition, being low in alcohol and high in extract.

WINES.

American wines are rapidly becoming known for their excellent qualities and are competing with European brands for a reputation. That there are many imitation wines on the market has been common knowledge, but the most pessimistic observer would hardly wish to concede that more than 50 per cent. of the cheap wines never saw a grape. The results of the analyses of 20 samples of wines purchased at drug stores and grocery stores show this to be a fact. The first seven samples analyzed were wholly artificial products. They were made by soaking fruits, possibly raisins, fortifying the extracts with 12 to 15 per cent. of alcohol, adding large quantities of glucose, in one instance over 20 per cent., and in addition sweetening with saccharin to further develop the sweet taste. These samples contain salicylic acid and benzoate of soda as well as the saccharin, which is of itself a preservative. Evidently the original maker used a preservative to stop fermentation, and then the bottler used some more preservative of a different character to keep the goods after they had left his hands. The two blackberry cordials examined were entirely artificial, and consisted of glucose syrup colored with coal-tar dye and preserved with salicylic acid and benzoate of soda, flavored with synthetic flavors to counterfeit the missing blackberry. Wine has been adulterated for 2,000 years, but the harvest time of the manufacturer of artificial goods is evidently the present. An attractively labeled bottle marked "Purity Guaranteed," and filled with a decoction of salicylic acid, benzoate of soda, saccharin, glucose, grain alcohol, synthetic flavors, glycerine, coal-tar dye and water, meets a ready sale as pure California port or sherry, depending upon the aromatic employed.

Samples Nos. 1782, 1783, 1784, 3548, 3788, 3789 and 3790 are evidently grape products of a fair degree of purity, although of poor quality. Most of them contain either saccharin or some preservative which necessitates their being classed as illegal.

Samples Nos. 3787, 3791 and 3792 are evidently pure and free from any preservatives or saccharin.

GINGER ALES.

Ginger ale is a nonalcoholic beverage made by carbonating a dilute solution of extract of ginger, sugar and some simple acid in water. It is a pleasant and refreshing beverage when properly prepared. The formula employed and the method of preparation varies greatly with the different manufacturers. Examination of the analyses shows very little uniformity of composition. The amount of residue on evaporation varies from 3 to 20 per cent. and the sucrose content from nothing to 8.44 per cent. Since a sweet drink is desired, many of the manufacturers resort to the use of saccharin to develop this taste, since saccharin is much less expensive than sugar and is not fermentable but is in itself a preservative. The use of saccharin is condemned by most medical authorities and all food experts. It was formerly much used by canners and packers of vegetables, such as tomatoes, sweet corn, etc., but at the present time it is no longer employed by reputable manufacturers. It has no place in the manufacture of a summer drink and its use should be discontinued. One sample was preserved with salicylic acid and one was colored with dinitrocresol.

MISCELLANEOUS FRUIT BEVERAGES.

Three of the four ciders analyzed were preserved with either benzoic or salicylic acid and the fourth sample was entirely artificial; three of the five grape juices contained sulfurous or salicylic acid. Of the four lime juices examined three were of full strength and free from preservatives. Of the four root beers analyzed three were free from preservatives, saccharin or glucose. One of the samples contained 40.96 milligrams of SO_2 per liter, which had evidently been added as an antiseptic.

CARBONATED SOFT DRINKS.

Included under this title is a variety of products made by the use of various syrups and carbonated water. Some of them are plain sugar syrups flavored with lemon or vanilla. Others purport to be made from fruit syrups, such as strawberries, raspberries, etc. Still others sold as tonics contain various root extracts. While the composition of these drinks varies widely, yet one fact is very noticeable—nearly all of them contain large quantities of saccharin and very small quantities of cane sugar. No preservatives were present in any of the samples; indeed, the large amount of saccharin used obviated the necessity for sugar syrup and of itself assisted in arresting fermentation. The analyses of these samples are given in full for the purpose of supplying data concerning the much used summer drinks.

VINEGARS.

Cider.—It has many times been asserted by those engaged in enforcing pure food laws that vinegars are subject to adulteration to an extent perhaps greater than is the case with any other article of food.

Analyses of samples of vinegar collected from every part of Indiana offer good evidence, that, in this State, at least, the statement is not overdrawn.

Two hundred and thirty-nine samples of cider vinegar were analyzed and 187 were found to be adulterated.

Of adulterated samples 157 were artificial and 30 were below the standard required for cider vinegars, in acidity or solids, or both.

The striking fact to be noticed in the summary of results is that nearly 80 per cent. of the vinegars examined were adulterated, a finding which is remarkable in view of the fact that our State is well able to make every gallon of vinegar consumed within it. The home product is displaced by the artificial, acetic acid solution, colored with caramel, to the loss of the farmer or local manufacturer, and the defrauding of the consumer who pays cider vinegar prices for a cheap, spurious product, lacking all the peculiar aroma and delicate flavor which has given cider vinegar its reputation.

When the standard of acidity and solids is fixed all vinegars which do not come up to the standard are adulterated, and the manufacturer or dealer in such an article is liable for violation of the pure food laws. The practice of saving the first pressing from apple pomace for cider and then wetting down the exhausted cheese with water before a second pressing produces a diluted cider which is low in solids and malic acid and which will never make good vinegar. Imperfect acetification is regularly met with. In such cases the vinegar has not been sufficiently aged or has been kept out of access to air. The oxidation of alcohol to acetic acid can only take place in the presence of a liberal supply of oxygen, and vinegar makers should not expect that cider put into a cool cellar in unvented barrels will make vinegar.

The quality of a vinegar is sometimes injured by an abnormal fermentation or the development of moulds, or by the presence of

vinegar eels (*Anguillula Oxophila*). Foreign substances are occasionally accidentally introduced into vinegar which injure its color or render it injurious to health. The common practice of using as a funnel a wooden bucket with a lead tube or of employing a lead spigot, leads to the formation of sugar of lead (lead acetate), which is an active poison.

The manufacturers of artificial vinegars are all located outside the State where we have been unable to reach them except by correspondence. The business methods of some of these firms are nefarious, and the opportunity that will be given us under the new Federal law for keeping products of such firms off our markets, will afford us a welcome relief. One firm in particular, the "Red Cross Cider & Vinegar Co.," of St. Louis, has been a persistent violator of the law. Their method has been to send a salesman through the state offering to sell a quantity of cider vinegar at a price somewhat below the market price, and to throw in one barrel with every six purchased. A guarantee of purity is pasted on every barrel which covers the entire head and reads thus:

"NOTICE.

We will forfeit \$100.00 for every barrel of vinegar bearing this certificate that is not the product of pure apple juice. This vinegar is pure, fermented apple juice and is warranted to more than fill the requirements of the pure food laws.

The Red Cross Vinegar Co."

This guarantee and the strong assertion of the salesman has convinced many dealers that their goods were genuine. In fact in some instances the first few barrels shipped have been pure, although the last consignment was invariably a fictitious article. These artificial vinegars, while formerly simply colored distilled vinegar, are now very skillfully made; the dealers, starting with a distilled stock, add apple solids, salts of potash, malic acid, phosphoric acid, or some other substance that produces a heavy precipitation with lead acetate; sugars, colors and flavoring essences, until their blend not only resembles cider vinegar in appearance and flavor, but has most of its chemical characteristics. It is impossible for the honest manufacturer or dealer in cider vinegar to compete with these spurious articles.

MALT VINEGAR.

The practice of selling colored distilled or spirit vinegar for a malt vinegar is very common. A charitable explanation of this violation of the law is that long continued trade in the imitation product has in a way fixed the name of "Malt" on the colored distilled vinegar, although it should be applied only to nondistilled goods made by the alcoholic and acetous fermentation of grain infusions.

Of the 20 samples of malt vinegar examined, but four were genuine malt vinegar, the rest were simply colored distilled vinegars.

GRAIN VINEGAR.

Grain vinegar is uncolored distilled vinegar. Ten of the 15 grain vinegars analyzed were illegal, either because of the addition of caramel color or an acidity below the 4 per cent standard.

MISCELLANEOUS FOOD PRODUCTS.

Under this head is placed a variety of subjects such as obesity cures, soda fountain syrups, coffee essences, vegetable butters, sausage fillers, junket tablets, pudding preparations, table sauces, etc. Of the 80 articles of this class 17, or 21 per cent., were illegal.

DRUGS.

Drugs are primarily intended for the cure of disease or the correction of abnormal conditions. While food adulteration is an economic fraud and rarely works an injury to the health of the consumer, the adulteration of drugs, either by lessening their strength or adding foreign ingredients, places in the hand of the physician an inferior article not adapted for the use to which it is put. When such drugs are used in the treatment of disease the adulteration becomes dangerous. A preparation of morphine may be prescribed by a physician for the relief of pain, the dose is fixed; if results are not forthcoming because of the adulteration or the weakening of the strength of the article, the dose is increased. When the bottle is empty the prescription may be refilled, this time with a full strength article. If the patient, thinking the drug is the same as before, takes a double dose, serious results will follow. Again, if the physician who prescribes a certain drug does not get the results he expects with his patient, he may change the prescription entirely, when all the fault may be due to an adulteration of the medicine in question. Certain classes of drugs are very liable to adulteration; indeed, some things which are pharmacopoeia preparations are rarely or never carried in stock by druggists as pure articles. This is true of black antimony, precipitated sulphur, and beeswax. Other goods frequently called for both by prescriptions and customers are very liable to be of inferior strength. The tinctures prepared by the dispenser we have found to be frequently below standard. The same is true of many of the extracts; on the other hand chemicals, such as potassium iodide, Rochelle salts, sodium phosphate, zinc sulphate, boric acid, cream of tartar, etc., are evidently not adulterated.

Two conditions operate against the sale of pure drugs. The first is the fault of the druggist himself who may either be unfamiliar

with the preparation of the articles he dispenses, or who delegates to boys or untrained clerks the preparation of medicines which can only successfully be produced by a skilled pharmacist. Secondly, the lack of care in the purchase of stock. While the wholesalers for the most part carry pure lines of goods, there are some concerns (fortunately for the honor of the drug trade in Indiana located outside the State), that make a practice of supplying low grade, cut rate drugs which they know to be impure when they sell them. The grocer may excuse the sale of adulterated goods on the plea that his customers want cheap things, but the druggist has no such excuse. Realizing that the preparations that he dispenses are to be used as medicine, usually by people not familiar with the drug they are taking, it becomes his duty to see that the drugs he sells are of normal strength and purity. The selling of patent medicines and fraudulent remedies which purport to be curealls and relief for every disease, has never been regulated in Indiana. Enormous quantities of worthless mixtures of alcohol or bad whisky with caramel and bitters, or even preparations containing morphine, opium, heroin, cocaine and habit forming drugs, are sold without restriction. The use of cocaine is on the increase among the poorer classes, especially among the negroes. The habit is formed by the use of so-called catarrh cures which are, in fact, nothing but cocaine preparations put up and sold for the purpose of satisfying the cravings of the cocaine fiend. Fortunately for the people, the Federal Food and Drug Law which compels the placing on the label of every package containing alcohol, morphine, opium, cocaine, heroin, chloroform, chloral hydrate, and acetanilide, a statement of the quantity of such ingredients present, will make it clear to the purchaser what he is buying and will tend to suppress the manufacture and sale of a large number of worthless preparations. During the year there have been collected and analyzed 1,559 samples of drugs. Of this number 596 have been pure and 963, or 62.5 per cent., adulterated. This percentage of adulteration is very high and indicates either a demoralized drug market or extreme carelessness on the part of the druggist and dealer.

RESULTS OF ANALYSIS OF DRUG SAMPLES.

PERCENTAGE OF ADULTERATION OF DRUGS IN INDIANA

YEAR ENDING OCTOBER 31, 1906

ALCOHOL.

Thirty-two of the 132 samples of alcohol analyzed were impure or below standard. In almost every case the alcohols were but slightly below the pharmacopoeia standard of 94.9 per cent. by volume. One sample only was diluted with water and in no case was methyl alcohol substituted for the grain alcohol purchased.

AQUA AMMONIA.

U. S. P. Aqua Ammonia contains 10 per cent. by weight of gaseous ammonia. Of the 75 samples examined, which were collected from both drug and grocery stores, but seven were up to strength; 90.8 per cent. were weak, dilute solutions, ranging from 20 to 96 per cent. U. S. P. strength. The so-called ammonia water dispensed by grocers for laundry purposes is rarely or never as strong as it should be. There is always some loss of strength as the stock grows old, but it is evident that the chief cause of weakness is not due to deterioration but to wilful dilution with water in the endeavor to produce a cheap article, to satisfy the demand of an ignorant public for a quart bottle for ten cents.

BAY RUM.

Seventy-eight samples of bay rum were analyzed, of which 10, or 12.9 per cent., were adulterated. In every case the adulteration consisted in the use of methyl or wood alcohol. Most of the samples so adulterated contained but small quantities of ethyl alcohol. The use of methyl alcohol in such preparations is in violation of good business ethics and the pure drug law.

BLACK ANTIMONY.

Of 45 samples of black antimony but two were pure antimony sulfid. All the others were almost entirely fraudulent. But seven of the entire number contained any antimony sulfid whatever, powdered coal, graphite or charcoal, mixed with small quantities of oxid of iron and marble dust being the usual article dispensed as black antimony.

The excuse of the wholesaler of such fraudulent mixtures is that black antimony is used only as horse medicine. Such an argument is a severe reflection on the intelligence of the veterinarian, for anyone who would knowingly prescribe a compound of coal and marble dust as a cure for disease knows no medicine.

GLYCERINE.

Of the 61 samples of glycerine analyzed 47, or 77 per cent., did not conform to the standard of the U. S. Pharmacopoeia. In no case was there evidence of fraud, but the larger number of samples of inferior quality indicate that the trade uses little care in purchasing this article. Many of the samples contained free sulphuric acid, butyric acid, acrolein, etc., due to improper purification in the process of manufacture, and several contained a large amount of sugar.

LIMEWATER (LIQUOR CALCIS).

One hundred and sixty-six samples of limewater were analyzed, and of that number 75, or 45.1 per cent., were below the U. S. P. standard. Limewater is simply a saturated aqueous solution of pure unslaked lime, the most easily prepared article to be found in a drug store. And yet the large number of adulterated samples would indicate that in nearly fifty per cent. of the drug stores of the State this article is not properly prepared. The explanation is doubtless that water is added to the jug containing the lime long after all of the lime has been dissolved. A number of the samples were entirely neutral, having no more alkalinity than tap water. The ignorance or greed of anyone who will dispense tap water when asked for something to correct acidity in milk fed an infant can only be suitably corrected by a severe application of official punishment.

PRECIPITATED SULPHUR (SULPHUR PRAECIPITATUM).

Of the 141 samples of precipitated sulphur analyzed but 17 were pure. All the other samples, or 88.0 per cent., contained large quantities of calcium sulfate. But few samples contained more than 55 per cent. of sulphur, and in most of the samples the calcium sulfate content was about equal to that of sulphur. This condition is undobutedly the result of careless preparation.

Precipitated sulphur is a preparation made by boiling a mixture of powdered sulphur and slaked lime, filtering the solution, and adding hydrochloric acid. The precipitate is then filtered and washed. Precipitated sulphur contains no calcium sulfate and leaves no sediment on ignition.

PRECIPITATED SULPHUR—LEGAL.

BEESWAX.

Beeswax is prepared by melting the honey free comb made by the bees, and skimming and filtering off the impurities. It is very liable to adulteration, as is shown by the results of our analyses. Of 87 samples of yellow or natural beeswax, 60 contained paraffin in quantities ranging from 10 per cent to 100 per cent., while but two out of 70 samples of bleached or white wax were free from paraffin.

Beeswax is worth 50 cents a pound, paraffin but 10 cents, a difference which readily explains the heavy adulteration of this article.

BEESWAX.

The butyro-refractometer of Zeiss can be used advantageously in determining the purity of a beeswax, the refractive index being very different from that of paraffin, its chief adulterant. If care is taken to control the temperature at which the reading is made it is possible to determine accurately the percentage of adulteration. The addition of each ten per cent. of paraffin decreases the butyro reading 1.6 degree. Based on this constant difference one of the assistant chemists, N. Thompson, has plotted the following curve, taking for a basis for work definite mixtures of beeswax and paraffin.

He has also determined the change in melting point for different mixtures of beeswax and paraffin and the results are plotted in the following curve.

SPIRITS OF CAMPHOR (SPIRITUS CAMPHORAE).

U. S. P. spirits of camphor is prepared by dissolving 100 grams of camphor gum in 800 centimeters of alcohol and making up to one liter. But 30 to 70 samples analyzed contained a sufficient quantity to satisfy this formula. One sample contained but 16 per cent. of the required amount.

TINCTURE OF IODINE (TINCTURA IODI).

But 21 out of 133 samples of tincture of iodine analyzed were of full strength. This corresponds to 84.2 per cent. adulteration. The fault is doubtless in the method of preparation, neglect to use the proper quantities of iodine and potassium iodide, or incomplete solution of the chemicals.

TINCTURE OF IRON (TINCTURA FERRI CHLORIDI).

Of 177 samples analyzed 138, or 78.5 per cent., were below the U. S. P. standard of not less than 13.28 per cent. of anhydrous ferric chloride. The low percentage of iron may be due to the use of impure chemicals, incomplete solution, or carelessness in preparation. We have prepared several samples according to the official U. S. P. method and had no trouble in producing a normal article.

MISCELLANEOUS DRUGS.

We have devoted some time to the examination of drugs in the form of chemicals commonly carried in stock by druggists. The samples analyzed were for the most part of good quality.

Of the seven samples of potassium iodide all were pure and up to the standard. Of the nine samples of potassium chlorate five were pure and four below standard. Two of the three samples of zinc sulfate were pure. The third sample, although pure, was improperly labeled.

All the fourteen samples of boric acid were pure, as were the seven samples of sodium phosphate, the four samples of Rochelle salts, and single samples of tartaric and salicylic acids.

BORIC ACID—LEGAL.

2356	J. D. Bartlett	Lafayette	Sodium sulfate present. Adulterated.

INSPECTION OF GROCERY STORES, MARKETS AND SLAUGHTER HOUSES.

Freedom from adulteration is an important requisite in foods. It is of even greater importance that the foods be handled in a cleanly manner, protected from dirt and flies, and kept from the outside contamination that is often more to be feared than mere adulteration. Proper care of stores and markets can only be secured at the price of eternal vigilance of the health officer or food inspector. Several cities of the State, notably Indianapolis, Crawfordsville, Ft. Wayne and Columbus, through local inspectors have done much to abolish filthy conditions and have secured reasonably satisfactory results. The State Food Inspectors have made note of the conditions of the stores and markets which they visited during the summer of 1906. Their instructions were

to note the general condition of the stores as to cleanliness, the way in which stock was cared for, as to protection from flies, dirt, etc., the condition of the rear room or store room in the back, and the condition of the refrigerator, taking special pains to notice its odor and appearance. The reports handed in by inspectors are given below:

INDIANAPOLIS.

Minnesota Grocery Co., 1037 E. Washington. Inspected August 21, 1906. Floor clean; rear clean; dried fruit wormy; other goods satisfactory.

Carter & Schober, 911 E. Washington. Inspected August 21, 1906. Floor clean; refrigerator clean and free from odor.

C. F. Miller & Co. Inspected October 4, 1906. Floor dirty; shelves clean; refrigerator satisfactory.

J. A. Schumm. Inspected October 4, 1906. Floor and rear room clean; refrigerator in good condition.

Kleinfeld & Khann. Inspected October 4, 1906. Floor and stock dirty.

J. S. Minich. Inspected October 4, 1906. Floor and shelves clean; refrigerator in good condition.

Boyd W. Grandstaff. Inspected October 4, 1906. Floor, shelves and ice box clean.

Booserman Grocery. Inspected October 4, 1906. Floor dirty, otherwise in good condition.

Palm Bros., Meat Market. Inspected October 4, 1906. Sawdust on floor; refrigerator sweet and clean.

MICHIGAN CITY.

Chas. Romel. Inspected October 5, 1906. Floor and stock clean; refrigerator in good condition.

J. B. Van Pellen. Inspected October 5, 1906. Floor dirty; goods and refrigerator clean.

Henry Finckie. Inspected October 5, 1906. Floor dirty; stock clean; refrigerator slightly ill smelling.

Sam Hunziker. Inspected October 5, 1906. Floor clean; shelves clean; refrigerator clean.

G. M. Edwards. Inspected October 5, 1906. Everything in good condition.

Frank E. Gielow. Inspected October 5, 1906. Floor and stock clean.

A. H. Lohsand Grocery. Inspected October 5, 1906. Floor and shelves clean; rear room satisfactory.

Fred J. Krueger. Inspected October 5, 1906. Floor and rear room dirty.

L. B. Ashton. Inspected October 5, 1906. Floor and stock clean; rear room in good condition.

Ray, Ebert & Co. Inspected October 5, 1906. Floor and stock clean; refrigerator in good condition.

Gildden Bros. Inspected October 5, 1906. Floor dirty; stock clean and in good condition; rear room and refrigerator clean.

M. E. Clark. Inspected October 5, 1906. Floor, stock and refrigerator clean.

G. Cruse & Co. Inspected October 5, 1906. Floor and goods clean.

L. W. Muse. Inspected October 5, 1906. Floor dirty; goods clean; rear room dirty.

Ernest Arch. Inspected October 5, 1906. Floor and goods clean; refrigerator satisfactory.

D. A. Keading. Inspected October 5, 1906. Floor dirty; stock and refrigerator in good condition.

WHITING.

Braidich Bros. Inspected October 8, 1906. Floor dirty; rear room, shelves and stock dirty.

Heyden Place Co. Inspected October 8, 1906. Floor and shelves clean.

M. A. Balla Grocery. Inspected October 8, 1906. Sawdust on floor; refrigerator satisfactory.

Jas. Allison. Inspected October 8, 1906. Floor clean; shelves clean; in good condition.

The Whiting Market Store. Inspected October 8, 1906. Floor and goods clean; refrigerator clean.

HAMMOND.

J. J. Austin. Inspected October 8, 1906. Floor and refrigerator clean.

H. T. Burk. Inspected October 8, 1906. Floor clean; stock clean; meat market in rear; refrigerator satisfactory; rear room clean.

Wm. A. Berriger. Inspected October 8, 1906. Floor and shelves clean; meat market in rear, sawdust on floor; refrigerator clean.

M. Maginot. Inspected October 8, 1906. Floor and stock clean; general conditions good.

M. Griswold. Inspected October 8, 1906. Floor and shelves clean; meat market in rear; refrigerator in good shape.

S. A. Southack. Inspected October 8, 1906. Floor clean; stock dirty; shelves mussy; refrigerator fair.

Mrs. Bertha Grimes. Inspected October 8, 1906. Floor clean; stock and refrigerator dirty.

H. W. Warwick & Co. Inspected October 8, 1906. Floor clean; stock clean; refrigerator dirty.

A. H. Bunde. Inspected October 8, 1906. Floor dirty; stock, rear room and refrigerator clean.

F. R. Nason. Inspected October 8, 1906. Floor and refrigerator clean.

M. M. Koch. Inspected October 8, 1906. Floor, stock and rear room clean.

Hursh & Warwich. Inspected October 8, 1906. Floor dirty; stock and refrigerator clean; rear room mussy.

Hammond Meat Market. Inspected October 8, 1906. Floor, refrigerator and rear room clean.

VALPARAISO.

C. E. Shield. Inspected October 9, 1906. Floor dirty; stock clean.

Wm. Gossill, Meat Market. Inspected October 9, 1906. Sawdust on floor; refrigerator clean.

W. C. Windle. Inspected October 9, 1906. Floor, stock and refrigerator clean.

J. W. Seib, Meats. Inspected October 9, 1906. Sawdust on floor; refrigerator clean; rear room dirty.

Leety & Sons. Inspected October 9, 1906. Floor clean; stock, refrigerator and rear room clean.

F. Beyer. Inspected October 9, 1906. Floor and stock in good shape.

Herrick & Herrick. Inspected October 9, 1906. Floor dirty; stock mussy.

PLYMOUTH.

I. Miller. Inspected October 10, 1906. Floor clean; rear room and stock rather dirty.

Enterprise Grocery. Inspected October 10, 1906. Floor, rear room and stock clean.

W. A. Beldon. Inspected October 10, 1906. Sawdust on floor; refrigerator and rear room clean.

W. F. Sult. Inspected October 10, 1906. Floor, stock and rear room clean.

A. M. Reaves. Inspected October 10, 1906. Floor clean; stock dirty; refrigerator and rear room dirty.

Geo. Vinalls Grocery. Inspected October 10, 1906. Floor, stock and rear room clean.

L. J. Southworf. Inspected October 10, 1906. Floor and stock clean.

ROCHESTER.

Millic Grocery Co. Inspected October 12, 1906. Floor, stock, rear room and refrigerator clean.

W. H. Lowry Grocery. Inspected October 12, 1906.

Shore & Wilson. Inspected October 12, 1906. Floor, stock, refrigerator and rear room clean.

L. E. Downey. Inspected October 12, 1906. Floor clean; stock and refrigerator in good shape.

H. Brothers. Inspected October 12, 1906. Floor dirty; stock in fairly good shape; refrigerator clean.

J. F. Kepler. Inspected October 12, 1906. Floor and stock clean; rear room dirty.

L. W. Davidson. Inspected October 12, 1906. Floor and stock clean.

F. A. Kilmer. Inspected October 12, 1906. Floor dirty; stock clean; rear room clean.

PERU.

Kelly & Allman. Inspected October 12, 1906. Floor, stock and refrigerator clean.

B. F. Weimer. Inspected October 12, 1906. Floor, stock, refrigerator and rear room clean.

Woods & Vaner. Inspected October 12, 1906. Floor, stock, refrigerator clean.

E. A. Schram. Inspected October 12, 1906. Floor and stock clean.

Peru Mercantile Co. Inspected October 12, 1906. Floor dirty; stock clean.

Glennon Wendt. Inspected October 12, 1906. Floor, stock and refrigerator clean; rear room dirty.

S. W. Smith. Inspected October 12, 1906. Floor, stock and rear room clean.

J. W. Miller. Inspected October 12, 1906. Floor dirty; stock mussy.

F. I. Derberts. Inspected October 12, 1906. Floor dirty; stock and refrigerator clean; rear room floor dirty.

W. T. Hanson. Inspected October 12, 1906. Floor, stock and refrigerator clean.

John Devine Grocery. Inspected October 12, 1906. Floor clean; stock dirty; meat market in rear of store; refrigerator clean.

Petty-Drums. Inspected October 12, 1906. Floor, shelves, stock dirty; meat market in rear; dirt around the refrigerator.

J. D. Helderle. Inspected October 12, 1906. Floor clean; stock mussy; refrigerator fair.

W. Petty Grocery. Inspected October 12, 1906. Floor dirty; stock and refrigerator clean.

J. J. Glennon. Inspected October 12, 1906. Floor dirty; stock and rear room clean.

McCaffrey & Co. Inspected October 12, 1906. Floor clean; stock clean; meat market in rear.

MADISON.

L. Danner. Inspected October 6, 1906. Grocery in good condition; back shop satisfactory.

Bilz & Kalb. Inspected October 6, 1906. Meat market satisfactory; refrigerator clean.

Spaulding & Thomas. Inspected October 6, 1906. Store and rear room in good condition.

Gus Yunker Meat Market. Inspected October 6, 1906. In very satisfactory condition.

J. F. Wells Grocery. Inspected October 6, 1906. Very satisfactory.

J. W. Temperly Grocery. Inspected October 6, 1906. In very good condition.

Chas. M. Short Grocery. Inspected October 6, 1906. Everything in good condition.

JEFFERSONVILLE.

Best & Co., Grocery. Inspected October 6, 1906. In good condition.

M. J. Kenor, Grocery. Inspected October 6, 1906. Grocery satisfactory; meats screened off.

NEW ALBANY.

R. L. Grossheider, Grocery. Inspected October 6, 1906. In good condition.

W. O. Davis, Grocery and Meats. Inspected October 6, 1906. Store in good condition; refrigerator foul.

DANVILLE.

H. V. Hunt Grocery. Inspected September 28, 1906. Stock clean; in good condition.

J. R. Brien. Inspected September 28, 1906. In excellent condition.

B. F. Howell & Son. Inspected September 28, 1906. Store in good condition.

H. H. Mills. Inspected September 28, 1906. Stock clean; refrigerator satisfactory; floor dirty.

J. M. Holman, Meat Market. Inspected September 28, 1906. Floor and refrigerator clean.

J. L. Darnell, Grocery. Inspected September 28, 1906. In good condition.

GREENCASTLE.

Zeis & Co. Inspected September 27, 1906. Stock in good condition; general conditions poor; many flies.

Enterprise Department Store. Inspected September 27, 1906. Grocery department good.

Wm. Haspel, Meat Market. Inspected September 27, 1906. Very dirty; many flies; refrigerator dirty.

Egger & Cooper. Inspected September 27, 1906. Condition fair.

C. H. Meikel. Inspected September 27, 1906. Condition good.

J. C. Browning Grocery. Inspected September 27, 1906. Stock clean; meat department dirty.

R. S. Cooper. Inspected September 27, 1906. Floor dirty; general conditions good; refrigerator in excellent condition.

T. E. Evans. Inspected September 27, 1906. Store in good condition.

J. L. Peters Grocery. Inspected September 27, 1906. Grocery satisfactory; meat market in fair shape.

W. Craig. Inspected September 27, 1906. Everything in good condition.

T. A. Moran. Inspected September 27, 1906. Good condition.

E. C. Caldwell. Inspected September 27, 1906. Store and goods in fair condition.

C. H. Cook. Inspected September 27, 1906. Store in good shape.

W. H. Allen. Inspected September 27, 1906. Good condition.

BRAZIL.

Hudson & Hudson. Inspected September 27, 1906. Shop clean; refrigerator clean.

G. H. Jones & Co. Inspected September 29, 1906. Everything in good condition.

Jones & Co. Inspected September 29, 1906. Conditions very good in store; refrigerator only fair.

G. H. Jones & Co. Inspected September 29, 1906. Store very clean; refrigerator fairly clean.

Hudson Bros., West Side. Inspected September 29, 1906. Store and refrigerator clean; rendering department only fair.

G. H. Jones & Co., 512 W. Main street. Inspected September 29, 1906. Store in excellent condition.

G. H. Jones & Co., 702 Main street. Inspected September 29, 1906. Store and refrigerator clean.

G. H. Jones & Co., 818 Main street. Inspected September 29, 1906. Store clean; refrigerator not very clean.

M. C. Stewart. Inspected September 29, 1906. Refrigerator good; racks rather dirty.

G. H. Jones & Co., Main street. Inspected September 29, 1906. Store and refrigerator very clean; racks rather dirty.

G. H. Jones & Co., 18 N. Meridian street. Inspected September 29, 1906. Store clean; refrigerator fair.

R. S. Stewart, 641 E. Main street. Inspected September 29, 1906. Store and refrigerator clean.

James Hunter Grocery. Inspected September 29, 1906. Store clean; stock good.

A. Comparon, 802 N. Vandalia. Inspected September 29, 1906. Store in fairly good condition.

Joseph Dascamps. Inspected September 29, 1906. In fair condition.

Mc. Rulle, 255 N. Ashley street. Inspected September 29, 1906. Refrigerator very dirty; stock good.

M. C. Murphy, 565 E. Main street. Inspected September 29, 1906. Very good condition.

Chevallier Bros., 557 Main street. Inspected October 1, 1906. Condition fair.

Monarch Grocery. Inspected October 1, 1906. Everything in good shape.

T. C. Cole, 515 E. Main street. Inspected October 1, 1906. Condition good.

E. N. Evans, 212 E. Main street. Inspected October 1, 1906. Store clean; stock satisfactory.

R. H. Bolin & Son, 217 E. Main street. Inspected October 1, 1906. Good.

L. S. Easter Meat Market. Inspected October 1, 1906. Refrigerator fair; meats and groceries good.

J. A. Krider. Inspected October 1, 1906. Good condition.

Collier & Thompson. Inspected October 1, 1906. Store and stock fairly good.

Kinzan Bros. Inspected October 1, 1906. Conditions fair.

S. T. Gonter & Co. Inspected October 1, 1906. Good.

J. A. Decker. Inspected October 1, 1906. Store fair; meat department dirty.

Geo. Ostwalt. Inspected October 1, 1906. Store and stock in satisfactory condition.

Gibbons Bros. Inspected October 1, 1906. Good condition.
 J. Bogle. Inspected October 1, 1906. Everything in very good shape.
 A. W. Shafer. Inspected October 1, 1906. Good condition.

TERRE HAUTE.

J. W. Maud. Inspected October 2, 1906. Very dirty junk shop and grocery combined.
 P. O. Sullivan. Inspected October 2, 1906. Very dirty store.
 Bauemeister Grocery. Inspected October 2, 1906. Fair condition.
 Frank Smirtz, 113 Wabash avenue. Inspected October 2, 1906. Fairly clean; refrigerator new but dirty.
 W. H. Fink, 112 Wabash avenue. Inspected October 2, 1906. Conditions good.
 J. W. Hoff, 120 Wabash avenue. Inspected October 2, 1906. Very dirty shop; air foul; two dogs in shop.
 H. C. Trowbridge, 119 Wabash avenue. Inspected October 2, 1906. Shop clean.
 G. P. Willis, 128 Wabash avenue. Inspected October 2, 1906. Nice clean shop; racks in refrigerator dirty.
 Jonas Strause, Wabash avenue. Inspected October 2, 1906. In fair condition.
 E. A. Hollingsworth, Fourth and Cherry. Inspected October 2, 1906. Both grocery and meat market clean.
 Wm. Fuhr, 212 S. Fourth street. Inspected October 2, 1906. In good condition.
 C. W. Nagel, 210 S. Fourth street. Inspected October 2, 1906. Store in good condition; refrigerator clean.
 B. S. Rockwood, 204 S. Fourth street. Inspected October 2, 1906. Everything clean and satisfactory.
 J. W. Brown. Inspected October 2, 1906. Conditions fair; refrigerator clean.
 W. H. Morris, Fifth and Ohio streets. Inspected October 2, 1906. Grocery and meat market clean; refrigerator clean.
 A. R. Norris, 417 Ohio street. Inspected October 2, 1906. Refrigerator clean; in fair shape.
 Wright & King Co., 647 Wabash avenue. Inspected October 2, 1906. Both meat market and grocery in excellent condition.
 W. W. Kaufman, Seventh and Wabash avenue. Inspected October 2, 1906. Good condition.
 F. A. Brown. Inspected October 2, 1906. Meat market in good condition.
 J. B. Ryan, 802 Wabash avenue. Inspected October 2, 1906. Not much of a store.
 S. Bressette, Eleventh and Wabash avenue. Inspected October 2, 1906. Grocery and meat market satisfactory; refrigerator fairly clean.
 Tine & Voight, 1141 Wabash avenue. Inspected October 2, 1906. Meat market fair; grocery in good condition; refrigerator dirty.
 Geo. Burgets, 1209 Wabash avenue. Inspected October 2, 1906. Very clean; refrigerator excellent.

F. W. Hoff, 1300 Wabash avenue. Inspected October 2, 1906. In good condition.

Thos. G. Lowe, 1353 Wabash avenue. Inspected October 2, 1906. Store in fairly good shape.

E. R. Pence, 1367 Wabash avenue. Inspected October 2, 1906. Grocery and meat market both satisfactory.

C. H. Clifton, 1513 Wabash avenue. Inspected October 2, 1906. Good.

G. C. Baesler, 1404 Wabash avenue. Inspected October 2, 1906. Meat market very good.

O. C. Hancock, 1529 Wabash avenue. Inspected October 2, 1906. Good condition.

W. R. Scott, 530 S. Second street. Inspected October 2, 1906. Store clean; refrigerator dirty.

Nat Kemper, 530 S. Third. Inspected October 2, 1906. Good condition.

John C. Vendall, 1101 S. Eighth street. Inspected October 2, 1906. Store clean.

J. T. McCullough, Ninth and College avenue. Inspected October 2, 1906. Store very clean; refrigerator exceptionally clean.

H. H. Thomas, 1222 College avenue. Inspected October 2, 1906. Good condition.

Herndon Bros., College and Thirteenth. Inspected October 2, 1906. Store very clean.

Keplin & Kahane, 100 S. Thirteenth. Inspected October 2, 1906. Good condition.

B. Reemer, 465 S. Thirteenth. Inspected October 2, 1906. General conditions good.

L. T. Scott, 1328 Poplar street. Inspected October 2, 1906. Good.

Oedink Bros., 1326 Poplar street. Inspected October 2, 1906. Store satisfactory.

J. F. Liehr, 1200 Poplar street. Inspected October 2, 1906. Goods and store clean.

H. Valentine, 1123 Poplar. Inspected October 2, 1906. Meat market in good shape.

H. Valentine. Inspected October 2, 1906. Grocery stock and store clean and in good condition.

J. Van Duzer, 1101 Poplar. Inspected October 2, 1906. Conditions good.

H. Handick, 1004 Poplar. Inspected October 2, 1906. Conditions fair.

John Dammershausen, Fifteenth and Liberty. Inspected October 2, 1906. Store in fairly good condition.

Fred Schanefeld. Fifteenth and Liberty. Inspected October 2, 1906. Store and stock in very good condition.

O. Vokley, 1540 Liberty street. Inspected October 2, 1906. Everything satisfactory.

J. B. Galliger, 1801 Liberty street. Inspected October 2, 1906. Store and stock clean; good.

J. W. Fritz, Fourteenth and Locust. Inspected October 2, 1906. Meat market and grocery fair.

P. C. Noban, 835 N. Thirteenth street. Inspected October 2, 1906. Refrigerator clean; store fair.

Fritz C. Fry, Locust and Thirteenth. Inspected October 2, 1906. In fair condition.

C. S. Smith, 934 Locust. Inspected October 2, 1906. In fair condition.

Frank Byrne, 901 N. Eighth. Inspected October 2, 1906. Very good.

G. W. Hess, 321 N. Ninth. Inspected October 2, 1906. In good condition.

A. Ray & Co., 605 Tippecanoe street. Inspected October 2, 1906. Everything satisfactory.

Andy Rowe, 827 Sixth street. Inspected October 2, 1906. Store in fairly good condition.

J. W. Rood, 614 Locust street. Inspected October 2, 1906. Store and stock in fair shape.

J. H. Helmick, 830 N. Sixth. Inspected October 2, 1906. Both grocery and meat market good.

H. S. Thomas, 402 Locust street. Inspected October 2, 1906. Very good condition.

J. Pendigast, 1033 N. Fourth street. Inspected October 2, 1906. Grocery and meat market fair.

J. P. Fagan, 400 N. Fourth street. Inspected October 2, 1906. This store is an excellent one.

John Formahlen, Fourth and Eighth avenue. Inspected October 2, 1906. In fairly good condition.

R. D. Pierson, 302 Hancock. Inspected October 2, 1906. Fairly good.

C. W. Ferguson, 2034 N. Third street. Inspected October 2, 1906. In good condition.

SLAUGHTER HOUSES.

Snyder's, Jeffersonville. Inspected October 6, 1906. Horrible condition of filth and stench; very old tumble-down buildings, impossible to clean; offal fed to hogs; slaughter house only, as carcasses are hauled away soon after killing; fat and tallow rendered in filthy kettle; entire surroundings could not be worse.

Wm. Haspel, Greencastle. Inspected September 26, 1906. This slaughter house is in a very dirty condition. The hides are salted down on the killing floor; the offal is thrown through a window to the ground where it is eaten by sickly looking hogs or left to decay. This pile is about a foot thick and ten feet in diameter. Flies go from the rotting refuse to the interior of the house, as no screens are in the building. They wash the house occasionally and at certain seasons of the year the stream which flows nearby overflows and floods the yard, house, etc., washing everything away. There are two other slaughter houses in Greencastle, both in fair condition, although not screened nor sanitarily kept.

F. H. Jones & Co., Brazil. Inspected September 29, 1906. This slaughter house is in very good condition; there are cement floors and the water supply is abundant for keeping the place clean.

Steward's Slaughter House, Brazil. Inspected September 29, 1906. This place is in a fair condition, although not screened. The temporary storage room was clean.

Terre Haute Abattoir & Stockyards Co. Inspected October 1, 1906. The surroundings of this place are very dirty and the platform where the meat is loaded on is unclean. The slaughtering rooms are in good condition, having a plentiful supply of water; there are no screens in the windows. The room where the fertilizer is made is in direct connection with both killing rooms. The manager promised to clean up and use screens, and the inspector recommended that the fertilizer room be separated by a partition from the rest of the plant. The cooling room was in excellent condition.

Valentine & Co., Terre Haute. Inspected October 1, 1906. This is a new slaughter house; conditions are good, although no screens are used and there are many flies. Manager promised to use screens; excellent cooling room.

Anderson Dressed Beef Co., Anderson. Inspected September 9, 1906. This slaughter house has rather good external appearance and consists of three rooms; the cooling room is fairly clean, although an odor is noticeable; the slaughtering room had considerable refuse on the floors; the rendering room is very filthy, the tanks being covered with grease and dirt, with refuse all around and the walls coated with dirt; a decided odor is noticeable in this room. The offal is fed to the hogs and they wallow in a pool of blood and water.

REPORT

OF

Bacteriological and Pathological
Division.

Year Ending October 31, 1906.

T. VICTOR KEENE, M. D.,
Superintendent.

HELENE H. KNABE, M. D.,
Ass't Superintendent.

ADA SWEITZER,
Assistant.

CHARACTER OF WORK AND AIMS

OF THE

Bacteriological and Pathological Division

OF THE

STATE LABORATORY OF HYGIENE.

The practical work of this laboratory is the examination of samples of sputum, the examination of diphtheria cultures, the examination of samples of blood and the examination of curettings and other pathological specimens, to aid physicians in making diagnoses, to the end that the people may be benefited. It is obvious that if diagnosis of disease is made more accurate and made earlier, that more cures can be made and more lives saved by the medical art. It not infrequently happens in regard to diphtheria that the physicians of a neighborhood differ as to the diagnosis, some contending for diphtheria and others for tonsilitis or other forms of angina. In such instances, the laboratory can make accurate decision, which is a great point in the isolation and quarantine of the disease for the purpose of its control. In consumption, the microscopical examination of the sputum is of great importance, for frequently patients will not accept the clinical diagnosis of physicians, and then they do not observe the health rules for disease prevention, and go on spreading the disease. And again, in such instances, the patient is lost, because he neglects to apply proper methods of cure, but goes on taking medicine in the hope of relief.

Blood examinations to diagnose typhoid fever are at this time a necessity. This is because at certain stages of these maladies it is impossible for the clinician to make absolute diagnosis. As it is with diphtheria, so it is with typhoid, the unrecognized and

mild cases spread the infection. As for the differentiation of typhoid and malaria, it is true that in not a few instances this can be done in the laboratory only. At the Indiana Soldiers' Home a year ago and at Richmond in the summer of 1906, it was discovered through the laboratory that epidemics of typhoid prevailed, most of the cases being mild, but competent to spread the disease in virulent form. This discovery was of much importance in staying the further spread of the disease.

Examinations made are herein tabulated and summarized. The tables show total number of examinations, and results by counties, and are followed by summaries.

REPORT FROM THE DIVISION OF BACTERIOLOGY AND PATHOLOGY OF THE INDIANA STATE LABORATORY OF HYGIENE.

January.—A number of the specimens which appear in this month's report were examined during October, November and December, before the State Laboratory of Hygiene was formally established. Indeed, many of the physicians who had keenly felt the need of such an institution for a long time began to send specimens to the State Board of Health as soon as it became known that an appropriation had been made by the Legislature for this purpose.

BACTERIOLOGICAL EXAMINATIONS

	<i>Positive.</i>	<i>Negative.</i>	<i>Total.</i>
Sputum (tuberculosis)	69	72	141
Diphtheria	23	18	41
Blood (typhoid).....	18	6	24

February.—We did not receive many specimens and were rather glad of it, because of the number of outfits for the collection of sputum, blood and diphtheria cultures which were to be sent to all parts of the State. These outfits are prepared and shipped by the employes of this laboratory. Letters have also been written to the health officers and the secretaries of the county medical societies, explaining the rules governing the work in this laboratory, and inviting the physicians to avail themselves of our services.

Of the 21 examinations for bacillus diphtheriæ, 13 were positive, and of these six specimens were received from Fort Wayne, three from Michigan City and three from Indianapolis, these specimens having been sent by one physician respectively from each city.

BACTERIOLOGICAL EXAMINATIONS.

	<i>Positive.</i>	<i>Negative.</i>	<i>Doubtful.</i>	<i>Total.</i>
Sputum (tuberculosis).....	29	66	..	95
Diphtheria	13	8	..	21
Blood (typhoid)	8	2	..	10

March.—We note with pleasure the increase of specimens sent for diagnosis, as this is only the third month since the formal opening of the Laboratory of Hygiene.

Diphtheria has not been much in evidence, only four of eight cultures giving a positive result. As might be expected, there is an increase in typhoid fever, because this disease is more prone to occur during the seasons where either heavy rains or the melting ice and snow increase the volume of surface water. As a consequence, many places which during the previous months had been polluted with excreta from persons suffering with typhoid fever, are now covered with water, which, receding, carries with it the dangerous bacteria, to distribute the disease in other places.

Of the 20 positive Widal reactions, six were found in blood, obtained from patients residing in Indianapolis, five others came from Michigan City. The examinations of sputum have increased considerably in number, Marion, Wayne and Clinton counties furnishing each a large percentage of the 142 examinations of this character.

BACTERIOLOGICAL EXAMINATIONS.

	<i>Positive.</i>	<i>Negative.</i>	<i>Doubtful.</i>	<i>Total.</i>
Sputum (tuberculosis).....	51	91	..	142
Diphtheria	4	4	..	8
Blood (typhoid).....	14	1	..	15

April—Typhoid fever is still on the increase. Greencastle, Putnam County, has quite an epidemic of this disease, 26 specimens from this town alone having been submitted for examination, all of them giving a positive Widal reaction. Laporte County, as represented by Michigan City, is in evidence with five positive

reactions. The remainder of the specimens are pretty evenly divided, with the exception of Marion and Vigo counties, which have three positive Widal tests each. The tuberculosis situation, judging from the specimens received this month, is bad indeed, nearly one-half of all cases showing the presence of bacillus tuberculosis.

BACTERIOLOGICAL EXAMINATIONS.

	<i>Positive.</i>	<i>Negative.</i>	<i>Doubtful.</i>	<i>Total.</i>
Sputum (tuberculosis).....	95	87	..	182
Diphtheria	4	2	..	6
Blood (typhoid).....	42	5	..	47

May.—Our records for this month show that we have made more examinations for tuberculosis than for any other disease. Nearly two-thirds of 168 samples of sputum contained tubercle bacilli. Thirteen positive Widal examinations came from nearly as many counties. The number of examinations to determine the presence of bacillus diphtheriæ was almost double that of last month.

BACTERIOLOGICAL EXAMINATIONS.

	<i>Positive.</i>	<i>Negative.</i>	<i>Doubtful.</i>	<i>Total.</i>
Sputum (tuberculosis).....	109	59	..	168
Diphtheria	5	6	..	11
Blood (typhoid).....	13	..	..	13

June.—There is very little to be said of this month. Laporte County furnished six cases of typhoid fever, although not all of them were from one town.

Of the 139 specimens examined for tuberculosis the majority gave a negative result. Diphtheria does not seem to prevail very extensively, as only ten cultures were submitted for examination during the month, and of these six did not contain diphtheria bacilli. This, with the exception of January, is the first month which shows more specimens with a negative result. We hope the cause of this is that the physicians avail themselves of the services of this laboratory in those cases which present but slightly suspicious symptoms, and if this supposition is correct it will mean that a long step toward the stamping out of this disease has been taken.

BACTERIOLOGICAL EXAMINATIONS.

	<i>Positive.</i>	<i>Negative.</i>	<i>Total.</i>
Sputum (tuberculosis).....	47	92	139
Diphtheria	2	2	4
Blood (typhoid).....	11	5	16

July.—During the month of July, 1906, the examinations made in the Division of Bacteriology and Pathology of the Indiana State Laboratory of Hygiene were as follows:

1. EXAMINATIONS FOR BACILLUS TUBERCULOSIS.

	<i>Positive.</i>	<i>Negative.</i>	<i>Total.</i>
Sputum	74	115	189
Urine	2	5	7
Feces	0	3	3
Total	76	123	199

2. WIDAL TEST FOR TYPHOID FEVER.

	<i>Positive.</i>	<i>Negative.</i>	<i>Doubtful.</i>	<i>Total.</i>
Blood	34	8	1	43

3. EXAMINATIONS FOR BACILLUS DIPHTHERIÆ.

	<i>Positive.</i>	<i>Negative.</i>	<i>Total.</i>
Culture from throat.....	3	5	8

4. EXAMINATIONS OF BLOOD FOR PLASMODIUM MALARIÆ.

	<i>Positive.</i>	<i>Negative.</i>	<i>Total.</i>
Blood	2	11	13

5. BACTERIOLOGICAL EXAMINATION OF MILK.

Number of samples.....	3
------------------------	---

These three samples showed very high counts, due probably to the unsatisfactory way in which they were shipped.

6. MISCELLANEOUS SPECIMENS.

Pathological growths.....	16
Examination for tetanus (positive).....	1
Anthrax (horse).....	1
Suspected tapeworm (negative).....	1
Piece of beef for pus.....	1
Pus for gonococcus (negative).....	1
Total	21

7. SUPPLIES SHIPPED OUT.

Sputum outfits.....	149
Widal blood outfits for Widal tests.....	73
Diphtheria outfits.....	16
Malaria slides.....	2

We note that the number of positive Widal tests was four times greater than that of the cases in which the result was negative. Reports of the attending physicians show that many of these cases of typhoid ran a very mild course.

Of the 228 specimens of suspected tuberculosis, 60.9 per cent. were negative. The number of pathological specimens has been unusually large. Many of them were pieces of new growths, which upon examination, proved to be carcinoma.

Several of the miscellaneous specimens are worthy of note. In one instance, cerebral fluid from a horse was sent in. The owner of the animal suspected anthrax, having lost within a short time, four horses kept in the same stables. Microscopical examination, however, revealed the presence of a mixed infection of meningococci and other bacteria. Another was a case of tetanus, due to an explosion of a toy pistol. The spores of *B. Tetanti* were found in smears made from the wound immediately after death of the patient.

There have been 374 reports and letters sent out from this Department. The kind letters received from physicians of the State show an increasing appreciation of the assistance rendered them by the Laboratory of Hygiene, an appreciation which is very gratifying to those who have charge of the work.

August.—The month of August shows an increase in the number of blood examinations for typhoid fever, 65 per cent. of the specimens giving a positive Widal reaction.

Of the specimens examined for tuberculosis, 46.8 per cent. showed the presence of tubercle bacilli.

The head of one dog was received to be examined for rabies, and Nagri bodies were found in the brain. In connection with this disease, it seems necessary to call the attention of physicians to the fact that the head of the animal supposed to be rabid must be submitted, because scrapings from the wound caused by the animal are not satisfactory for such examinations.

There are still specimens coming in which are not prepared

according to the rules of this laboratory, and on account of the danger to the examiner, we can not examine them any more. The manner in which the accompanying blanks are filled out by the physicians is also very far from satisfactory. In some cases, even the physician's name is omitted, and reports on such cases can not, of course, be made.

There were 291 specimens examined in the laboratory from August 1st to September 1st.

September.—During this month the number of Widal tests made in the laboratory was higher than in any of the preceding months. The reason for this is that in all parts of the State occurred many cases of intestinal diseases resembling typhoid fever. Those physicians who have availed themselves of the services of the laboratory for the past year are now aware of the fact that it is impossible to recognize a mild case of typhoid fever by the clinical symptoms only. Many of the cases which occurred during the past year were very mild or were attended by symptoms atypical in character. In nearly all cases, however, where there was a true typhoid infection, regardless of the clinical aspect of the case, the Widal reaction was present.

The results of our records now show that the majority of specimens received during this month came from patients suffering with acute intestinal disorders other than typhoid, and this demonstrates clearly that the laboratory fulfills the purpose for which it was created, viz., to assist the general practitioner in making a correct diagnosis of all doubtful cases where infectious diseases are suspected. The time saved in this way is very valuable to physicians, as well as patients, and especially in case of diphtheria the lapse of a few hours may seriously interfere with the chances of the patient's recovery.

Considering the number of specimens of sputum received for examination, we see that physicians are beginning to send more specimens from patients in whom no tuberculosis is present. This shows that any one of these cases will be given the proper treatment before the dread disease is established in the system, a fact which will be of the utmost importance in the economy of this State.

Typhoid fever.....	39	90	2	131

October.—The month of October has brought a heavy increase in the number of examinations of serum cultures to determine the presence of bacillus diphtheriæ. This disease seems to be disseminated pretty well throughout the State, as we have received cultures from many different counties. Out of 50 examinations of this kind, bacillus diphtheriæ was present in 30 cultures. Twelve cultures were found negative, i. e., micro-organisms other than diphtheria were the cause of inflammation of the upper air passages. The majority of these cases of true diphtheria occurred in children, although there was one case in an adult terminating fatally of which we received the culture after the death of the patient. In many of these cases the clinical symptoms were very slight, but the microscope revealed the fact that diphtheria bacilli were responsible for the trouble. We have no hesitation in saying that, had these mild cases been allowed to go on as simple sore throat or tonsilitis, there would have resulted an epidemic of diphtheria many times as severe as that, which the State Board of Health is combating at the present time.

In regard to the typhoid fever situation it is still grave enough, and we do not expect much abatement of this disease until the advent of winter.

SUMMARY.

As we look over the records at the close of the first year in the history of the Indiana State Laboratory of Hygiene, we note with appreciation the favorable aspect of conditions as we see them now. The early months of this work, before the formal opening of the laboratory, disclosed more clearly every day the dire need which existed in this State for just such an institution as the Laboratory of Hygiene. Nearly every specimen of sputum received at that time was teeming with tubercle bacilli. Practically all of these specimens came from people who had been under physicians' treatment for years. Slight colds, bronchitis and other diseases of the respiratory tract had followed each other closely in these patients, but as the price of a sputum examination was too high for most of them, no attempt was made in this direction; indeed, in many cases, the physician was compelled to donate his services during the years which elapsed from the appearance of symptoms of advanced tuberculosis until the death of the patient.

After the formal opening of the laboratory the question of getting in touch with the physicians of this State was the first to be solved. This was done through the newspapers, the Bulletin of the Indiana State Board of Health, and also by writing letters to the various medical societies. To address each physician as we would have liked to do was out of the question; also was it impossible to send one of the physicians employed in this laboratory to speak before the various medical societies and demonstrate the proper manner in which specimens should be sent. The physicians, however, soon began to make more use of the laboratory.

As the months passed by we noticed a remarkable change in connection with examinations for tuberculosis. Where, in the early part of the year one question on the record blanks, viz.: "How long have you been treating the patient?" was answered with—"Several years"—there appeared instead, "Two or three months." Now, at the end of one year, it is rare indeed to find it stated on any blank that the patient has been under treatment even as long as one month. The usual answer now received on this question is either, "Patient has just come under my observation" or "This is the second visit."

The great importance of this change becomes at once apparent when we consider the chronicity of tuberculosis. Whenever the

physician is enabled, at the time a patient comes to him, to have the sputum analyzed, he can at once take the proper measures to prevent this disease. Even in cases where tubercle bacilli are found the disease may be arrested.

A very notable instance of this character which we have had the good fortune to observe occurred during the past year. The sputum of Miss Mary Veach, residing at Mt. Summit, Ind., was sent for examination December 26, 1905, with the result that tubercle bacilli were present in small numbers. She was treated according to the rational method and specimens of her sputum were sent occasionally for examination. The bacilli persisted for about six months, then we did not hear from this patient for two months, and on August 3, 1906, another specimen was examined with negative result. This seemed so astonishing to the examining pathologist that inquiry was made to ascertain the probability of a mistake in sending the sputum. Since then, however, we have examined sputum from this patient repeatedly and are in position to record a case in which tuberculosis has been arrested in a resident of this State, merely by proper treatment, instituted at an early stage of the disease, without change of climate, as the patient never left her home.

As shown in the notes appended to the records of each month, several epidemics of typhoid fever and diphtheria occurred during the past year. Allen County has suffered most heavily from diph-

theria according to our records, as we find that ten out of twelve examinations of serum cultures showed the presence of diphtheria bacilli. Next to this comes Marion County, with eighteen positives out of twenty-seven examinations. We also received cultures from numerous other counties, but none of them gave as many positive results. Our records in Widal reactions show the largest number of positive results in Laporte County, where 25 of 29 cases were found to be typhoid fever. It is a notable fact that we have received specimens of this kind from physicians in Michigan City every month for the past year, and in a very small percentage only the result was negative. Wayne County is represented with 32 positive out of 66 examinations, and Jefferson County has 12 positive reactions from a total of 20 tests made. Marion County showed 69 positive reactions in 122 Widal tests; but it should be taken into consideration that this is only a small part of the Widal examinations made in this county, as the Indianapolis City Laboratory conducts the majority of these examinations in the above named city.

If the means to conduct a campaign of education among the citizens of Indiana are placed within the reach of the physicians connected with the Laboratory of Hygiene, the latter will be made the principal life-saving station of the State and results will not be long in forthcoming, as indeed they are showing now.

We are safe in saying that every physician who has availed himself of the services of the Indiana State Laboratory of Hygiene has materially benefited his community and incidentally every citizen in the State of Indiana.

STATISTICAL REPORT
FOR THE YEAR 1906.

REGISTRATION REPORT, 1906.

This report is for the calendar year 1906. The population figures are estimated from the census of 1900, according to the method of the United States Census Bureau.

In the following tables the causes of death are arranged according to the Bertillon classification, which has been adopted by all of the registration states of the country. This international classification was used by the United States Bureau of the Census in its last statistical compilation of causes of death.

Table 1 is a classification of all deaths with rates per 100,000 population, classified and arranged according to the international system.

Table 2 is a classification of deaths from all causes by months, ages, color, nationality and conjugal condition.

Table 2 A is a recapitulation of the classified deaths by months, ages, color, nationality and conjugal condition.

Table 3 gives death from all causes by counties, months, ages, color, nationality and conjugal condition.

Table 4 gives deaths from certain diseases by geographical sections and by counties.

Table 5 gives death rates from certain important causes, by counties in geographical sections.

Table 6, annual death rates for seven years, 1900 to 1907, with averages of cities of 5,000 population and over, compared with rural and state rates.

Table A gives births by counties, months, color and nationality of parents.

Table B gives births by counties, number of children born to each mother, grouped ages of parents, still births, plurality and illegitimate births.

Table C gives, by counties, the marriages by months, color and nationality.

Table D gives, by counties, the marriages by grouped ages.

BIRTHS.

The number of births reported in the State of Indiana during the year 1906 was 45,300, of which number 23,469 were males and 21,831 females. Of the total males, 23,013 were white and 456 col-

ored. Of the total females, 21,418 were white and 413 colored. In the preceding year 44,114 births reported; males, 22,281; females, 21,333. October had the largest number of births, 4,263, and June the smallest, 3,255. September had the greatest number of deaths, 3,146, and June the lowest, 2,429. The births (45,300) rate 17.1, exceed the deaths (35,992); rate 13.5 per 1,000 population.

The nationality of parents shows as follows: American-born fathers, 40,166; American-born mothers, 40,919. Foreign-born fathers, 2,901; foreign-born mothers, 2,360; Nationality not reported, fathers, 1,798; mothers, 1,586.

Of the number of children born to each mother, 13,210 were first; 9,779, second; 7,059, third; 4,841, fourth; 3,333, fifth; 2,352, sixth; 1,627, seventh; 1,128, eighth; 685, ninth; 433, tenth; 254, eleventh; 306 were twelfth child and over, and 293 were not reported.

As to the ages of parents, 648 fathers and 4,795 mothers were under twenty years of age. In the age period of 50 to 60 there were 928 fathers and 23 mothers; age period 60 to 70, there were 111 fathers, and between 70 and 80 there were eleven fathers.

One thousand one hundred and three still births, also reported as deaths. The illegitimate births numbered 806, of which 429 were males, and 377 females. The plural births numbered 862, of which 455 were males, and 407 females. There were four sets of triplets in this number of pluralities.

MARRIAGES.

The total marriages reported, 26,225. This is an increase over the preceding year of 615. October had the greatest number of marriages, 2,762, and May had the smallest number, 1,675. The general statistics on marriages will be found in Tables C and D.

DEATHS.

The total number of deaths reported in 1906 was 35,992, with a rate of 13.58. In the preceding year 36,502 deaths, with a rate of 13.78. Males, 19,009; females, 16,983. White males, 18,247; colored, 762; white females, 16,317; colored, 666. American-born, 16,715 males, 15,402 females; foreign-born, 1,992 males, 1,446 females; nationality not reported, 302 males and 135 females. Single males, 9,220; females, 6,979; married males, 6,938; females, 5,781; widowed males, 2,525; females, 4,129; conjugal condition not reported, 326 males and 94 females.

The number of deaths, with rates for the years named, appear in the following table:

	1900.	1901.	1902.	1903.	1904.	1905.	1906
Deaths.....	35,516	36,544	34,069	33,892	37,240	36,502	35,992
Annual Rate.....	14.1	14.5	13.5	13.4	14.0	13.7	13.5

Of the total number of deaths, 8,004, or 22.2 per cent. of the whole number, occurred in the first year of life. This is almost one-fourth of the total.

Two thousand four hundred and sixty-two deaths occurred in the age period of 1 to 5, making the total loss of children under 5 years of age 10,466, or 29.0 per cent. of the total deaths. This is 23.1 per cent. of the total births reported. In the age period of 5 to 20, there were 2,585 deaths, or 7.1 per cent. of the total number. The total loss under 21 years of age is 13,051, or 36.2 per cent. of the total deaths. In the age period of 20 to 50, practically the prime of life, there were 7,942 deaths, or 22.0 per cent. of the total deaths. There were 360 deaths of persons over 90 years of age, a decrease of 25 from 1905.

The following table, giving deaths by months, shows March with the greatest number of deaths, with January, April, August and September having about the same. June had the lowest number of deaths, as was the case in 1905.

Jan.	Feb.	Mch.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
3,110	2,924	3,321	3,142	2,765	2,429	2,845	3,136	3,146	3,101	3,049	3,024

March and April had the most tuberculosis deaths; March had most pneumonia; August and September were highest with diarrhoeal diseases, and October had the greatest number of typhoid deaths.

PRINCIPAL CAUSES OF DEATH FOR LAST SEVEN YEARS, WITH AVERAGE.

The following table gives the principal causes of death in their numerical order, for the past seven years, and also the yearly average for each cause, and Chart No. 1 gives a graphic representation of the principal causes for 1906:

PRINCIPAL CAUSES OF DEATH IN INDIANA FOR THE LAST SEVEN YEARS WITH AVERAGE.

PRINCIPAL CAUSES OF DEATH

IN INDIANA 1906

CHART No. 1.

TUBERCULOSIS.

Tuberculosis still goes on its murderous way in Indiana, yet a slight decrease as compared with preceding years appears. All the following tables and diagrams show a slight decrease. Whenever possible the State Board of Health calls the attention of the people to the facts that tuberculosis is preventable, that it is curable if taken in its early stages, and that through private and governmental effort it can be greatly reduced.

HAVOC WROUGHT BY CONSUMPTION IN INDIANA IN 1904-1905-1906.

	1904.	1905.	1906.

MONTHLY ANALYSIS OF TUBERCULOSIS DEATHS.

January—The total number of deaths from tuberculosis was 412; of these 355 were of the pulmonary form. Of the total number, 195 were males and 217 females. Of the males, 37 were fathers in the age period of 18 to 40 and left 77 orphans under 12 years of age. Of the females, 64 were mothers in the age period of 18 to 40 and left 130 orphans under 12 years of age. We credit consumption with the destruction of 101 fathers and mothers in the useful period

of life and the production of 207 orphans. How many of these poor children will find their way into the orphan asylums can not be told. The homes invaded by the disease were 330. Two hundred seven of the total consumption deaths were in the age period of 15 to 40, which is 52 per cent.

February—The total number of deaths from tuberculosis was 372, and of these 325 were of the pulmonary form. Of the total number, 196 were females and 176 males. Of the males, 30 were fathers in the age period of 18 to 40, and left 67 orphans under 12 years of age. Of the females, 77 were mothers in the age period of 18 to 40, and left 161 orphans under 12 years of age. Number of homes visited by the disease, 354. Total number of orphans produced, 168. Thirty-three of the deaths were under 15 years of age; 274 in the age period of 15 to 50, and the remainder were above 50.

March—The total number of deaths from tuberculosis was 406, and of these 343 were of the pulmonary form. Of the total number 195 were males and 211 females. Of the males 36 were fathers in the age period of 18 to 40, and left 77 orphans under 12 years of age. Of the females 87 were mothers in the age period of 18 to 40, and left 179 orphans under 12 years of age. The number of homes visited by the disease was 398. The total number of orphans produced was 256. There were 59 consumption deaths of persons over 60 years of age.

April—Total number of deaths from tuberculosis, all forms, was 411. Of these 359 were of the pulmonary form. Of the total number 191 were males and 220 females. Of the males 39 were fathers in the age period of 18 to 40 and left 80 orphans under 12 years of age. Of the females 83 were mothers in the same age period as above and left 167 orphans. The number of homes visited by the disease was 386. Total number of orphans produced, 247. Two hundred and ninety-five deaths were in the age period of 15 to 50, which is 17.7 per cent. of the total.

May—Total number of deaths from all forms, 376, 318 being pulmonary. Of the total number, 147 were males and 229 females. Of the males, 37 were fathers between the ages of 18 and 40, and left 77 orphans under 12 years of age. Of the females, 73 were mothers of the same age period as above, and left 149 orphans under 12 years of age. Number of homes invaded, 372. Total number of orphans created, 226. Number of widows created, 37; number of widowers, 73.

June—The total number of deaths from tuberculosis, all forms, was 317, 275 being pulmonary. Of the total number, 143 were males

and 174 females. Of the males, 27 were married and in the age period of 18 to 40, and left 57 orphans under 12 years of age. Of the females, 66 were married and in the same age period as above, and they left 133 orphans under 12 years of age. Total orphans created by the disease under 12 years of age, 190. The number of homes invaded was 287.

July—Total number of deaths, 319. Forty-five of these were other forms than pulmonary. Of the total number, 143 were males and 176 females. Of the males, 25 were married and were in the age period of 18 to 40, and they left 50 orphans under 12 years of age. Of the females, 57 were married and in the age period just named, and they left 116 orphans under 12 years of age. The total number of orphans made by this disease in one month was 166. The total number of homes invaded, 291.

August—Total number of deaths, 351, 297 pulmonary, 54 other forms. Of the total number, 106 were males and 195 females. Of the males, 22 were married and in the age period of 18 to 40, the prime of life, and they left 48 orphans under 12 years of age. Of the females, 75 were married in the same age period as above and left 157 orphans under 12 years of age. The total number of orphans was 205, and the homes invaded numbered 316. Two deaths occurred in the age period of 80 to 90.

September—Total number of deaths, 291—240 pulmonary, 51 other forms. Of the total number, 136 were males and 155 females. Of the males, 23 were married in the age period of 18 to 40 and left 46 orphans under 12 years of age. Of the females, 58 were married in the same age period as above and left 126 orphans under 12 years of age. Total number of orphans made by the disease this month, 172. Homes invaded, 251. Two deaths, both women, occurred at 80 years of age. Nineteen, 10 of whom were women, occurred in the age period of 70 to 80.

October—Total number of deaths 323, of which 267 were of the pulmonary form and 56 other forms. Of the total number, 134 were males and 189 females. Of the males, 29 were married in the age period of 18 to 40 and left 59 orphans under 12 years of age. Of the females, 66 were married in the same age period as above and left 139 orphans under 12. The total number of orphans made by the disease this month was 198. Homes invaded, 296. Thirteen tuberculosis deaths occurred of people over 70 years of age.

November—The total number of deaths was 323, of which 284 were of the pulmonary form, and 39 other forms. Of the total number, 129 were males and 184 females. Of the males, 28⁵ were

married in the age period of 18 to 40 and left 58 orphans under 12 years of age. Of the females, 76 were married in the same age period as above, and left 156 orphans under 12 years. The total number of orphans made by the disease this month was 214; homes invaded, 299. As usual the greatest destruction was in the useful period of life, 15 to 50, wherein 228, or 70.5 per cent., of the total deaths occurred.

December—Total number of deaths, 329, of which 293 were of the pulmonary form. The male deaths were 165, females 164. Of the males, 31 were married, in the age period of 18 to 40, and left 69 orphans under 12 years of age. Of the females, 56 were married, in the same age period as above, and left 116 orphans under 12 years of age. Total number of orphans made by the disease this month, 185. Homes invaded, 291. By age periods the tuberculosis deaths were: Under 5 years, 19; 5 to 15, 10; 15 to 40, 173; 40 to 60, 77; 60 and over, 50.

PNEUMONIA.

A slight decrease appears for pneumonia, inasmuch as the number of deaths in 1906 was 3,392, and the average annually for the last seven years is 3,419. In large cities pneumonia leads as a cause of death, but it is second to consumption in Indiana. The tables by months and by age periods, with their accompanying graphic charts, show the pneumonia status in this state.

PNEUMONIA DEATHS

COMPARISON BY MONTHS

■ - 1906

▨ - AVERAGE FOR LAST SEVEN YEARS

CHART 6

COMPARISON BY AGES

CHART 7

MONTHLY ANALYSIS OF PNEUMONIA DEATHS.

January—Pneumonia caused 415 deaths, rate 184.8 per 100,000. In the corresponding month last year, 558 deaths, rate 248.6. This is a decided improvement, for which we should be grateful. One hundred forty-seven of the deaths were under 15 years of age, 92 between 20 and 50, 138 over 50, 3 were 90 and over.

February—Pneumonia caused 403 deaths; rate, 197.8. In the corresponding month last year, 741 deaths; rate, 362.2. In the preceding month, 415 deaths; rate, 184.8 per 100,000. There were 12 fewer in February than occurred in January. Of the total pneumonia deaths, 187 were males and 216 females. It is quite unusual for females to lead in this disease. Of the total number, 142 were under 15 years of age, 84 between 15 and 50, and the remainder were over 50. The right comparison is by the corresponding month last year, when there were 741 deaths, being a difference in favor of February of this year of 334.

March—Pneumonia caused 469 deaths; rate, 208.9 per 100,000. This is an increase over the preceding month of 66 deaths. In the corresponding month last year, 599 deaths. By this comparison, which is the right one, there is a decided improvement to be noted, as there is a difference of 130 deaths. Seventy-five of the deaths from pneumonia were under one year of age, 73 in the age period of 1 to 5, 70 between 5 and 30, 113 between 30 and 60, 54 in the age period of 60 to 70, 51 from 70 to 80, 44 from 80 to 90, and three over 90.

April—Pneumonia caused 386 deaths. In the corresponding month last year, 223 deaths, an increase of 163. Fifty-four pneumonia deaths were under 1 year of age, 75 between 15 and 50, and 132 over 50. Two men over 90 years of age died from the malady.

May—Pneumonia caused 213 deaths. In the corresponding month last year, 170. By this comparison, there is an increase of 43 deaths. Of the pneumonia deaths, 68 were under 5 years of age, 17 between 5 and 20, 32 between 40 and 60, 18 between 60 and 70, 32 from 70 to 80, and 16 were 80 and over.

June—Pneumonia caused 111 deaths. In the corresponding month last year, 91 deaths. Forty-seven pneumonia deaths were under 5 years of age; 9 were from 5 to 20; 7, 20 to 40; 12, 40 to 60; 27, 60 to 80; 9, 80 and over.

July—Pneumonia caused 85 deaths. In the preceding month, 111. In the corresponding month last year, 63. Of the pneumonia deaths, 25 were under 20 years; 12 in the age period of 20 to 50; 14 in the age period of 50 to 70, and the remainder 70 years and over.

August—Total number of deaths, 79. In the corresponding month last year, 61. Of the pneumonia deaths, 14 were under one year of age; 13 were 1 to 5; 23, 5 to 50; 17, 50 to 70; 11, 70 to 90, and one was over 90 years old.

September—Total number of deaths, 93. In the corresponding month last year, 85. Of the pneumonia deaths, 30 were under 1 year of age; 17, 1 to 10; 6, 10 to 20; 6, 20 to 40; 10, 40 to 60; 10, 60 to 70; 10, 70 to 80; 6, 80 and over.

October—The total number of deaths from pneumonia, 176. In the corresponding month last year, 138. Of the pneumonia deaths, 59 were under one year of age, 38 in the age period of 1 to 5; 11 in the age period of 60 to 70; 17 in the age period of 70 to 80; 4 were over 80, and 2 over 90 years.

November—The total number of deaths from pneumonia was 302. In the corresponding month last year, 219. Of the pneumonia deaths, 83 occurred in the first year of life, 39 from 1 to 5 years; 45 were in the age period of 70 to 80, and 26 in the age period of 80 to 90, and 2 were over 90.

December—The total number of deaths, 408. In the corresponding month last year, 347. Of the total deaths this month 210 were males and 188 females. By certain ages the deaths were: Under 1 year, 106; 1 to 10, 42; 10 to 30, 31; 30 to 50, 47; from 50 to 70, 69; 70 and over, 91.

TYPHOID FEVER.

The typhoid fever deaths in 1906 numbered 913, which is a slight decrease as compared with the annual average, 1,100, for the last seven years. As shown in the tables herewith, and by the graphic charts drawn therefrom, typhoid has gradually fallen since 1900. The four last months of the year show more deaths from typhoid than the eight preceding months.

TYPHOID FEVER DEATHS

COMPARISON BY MONTHS

■ - 1906

▨ - AVERAGE FOR LAST SEVEN YEARS

CHART 8

COMPARISON BY AGES

CHART 9

MONTHLY ANALYSIS OF TYPHOID FEVER DEATHS.

January—Fifty-two counties report 175 cases of typhoid fever, with 33 deaths. In the corresponding month last year, 273 cases were reported with 50 deaths in 40 counties. In the preceding month there were 306 cases in 47 counties, with 66 deaths.

February—Thirty-eight counties reported 117 cases, with 29 deaths. In the corresponding month last year 42 counties reported 202 cases, with 32 deaths. In the preceding month 52 counties reported 175 cases, with 33 deaths.

March—Two hundred and fifty-eight cases were reported from 46 counties, with 37 deaths. In the corresponding month last year, 197 cases in 37 counties, with 30 deaths. In the preceding month, 117 cases in 38 counties, with 29 deaths.

April—Two hundred and eleven cases reported from 62 counties. The disease was epidemic in Daviess County, which reported 11 cases, with 1 death; in Jackson, with 6 cases and 1 death, and in Parke, with 8 cases and no deaths.

May—Ninety-four cases reported from 32 counties, with 40 deaths. The disease was epidemic in the following counties: Clark, 15 cases; Vanderburgh, 11; Washington, 15.

July—Two hundred and twenty-eight cases reported, with 44 deaths, from 49 counties. In the preceding month 94 cases, with 40 deaths, in 32 counties. The disease was epidemic in the following counties: Bartholomew, Clark, Howard, Jefferson, Morgan and Wayne. In Wayne County, at Richmond, many cases of sickness of an unusual nature appeared, some doctors calling the type of disease "summer gripe." Several physicians became suspicious and blood from these patients was sent to the Laboratory of Hygiene and was found to give the Widal reaction. It is estimated there were at least 200 cases of this mild typhoid fever in Richmond in July.

August—Four hundred and forty-six cases reported from 68 counties, with 93 deaths. In the corresponding month, 228 cases reported, with 48 deaths from 49 counties. In the corresponding month last year, 360 cases, with 125 deaths from 72 counties. The disease was epidemic in Adams County, 11 cases; Clay, 18; Daviess, 14; Delaware, 12; Madison, 12; Noble, 16; Vanderburgh, 35; Wayne, 50. We have every reason to believe that the disease, almost without question, existed in every county in the state either in mild or severe form.

September—Nine hundred and seventy-seven cases reported from 76 counties, with 143 deaths. In the preceding month, 446 cases in

68 counties, with 93 deaths. In the corresponding month last year, 1,080 cases in 96 counties, with 186 deaths. The disease was epidemic in the following counties: Bartholomew, 22; Clay, 20; Daviess, 30; Fayette, 20; Howard, 25; Lawrence, 33; Marion, 60; Montgomery, 17; Vanderburgh, 23; Vigo, 20; Wayne, 17; Washington, 15; Whitley, 25.

October—Seven hundred and thirty-two cases were reported from 73 counties, with 150 deaths. In the preceding month, 977 cases reported from 76 counties, with 143 deaths. In the corresponding month last year, there were 711 cases in 72 counties, with 152 deaths. The disease was epidemic in the following counties: Bartholomew, 11 cases; Delaware, 25; Howard, 15; Jefferson, 35; Madison, 25; Montgomery, 11; Noble, 17; Parke, 14; Posey, 27; Putnam, 12; White, 17.

November—Seven hundred and ninety cases of typhoid fever were reported in 73 counties, with 135 deaths. In the corresponding month last year, 570 cases from 62 counties, with 101 deaths. Several epidemics were reported. In Daviess County there were 16 cases and 2 deaths; Fayette, 10 cases and 2 deaths; Hancock, 16 cases, 1 death; Jackson, 10 cases, 2 deaths; Jay, 12 cases, 3 deaths; Lagrange, 15 cases, no deaths; Madison, 17 cases, 5 deaths; Noble, 10 cases, no deaths; Parke, 29 cases, 2 deaths; Putnam, 10 cases, no deaths; Vanderburgh, 12 cases, 1 death. We recognize from these reports that not a few cases of mild typhoid are diagnosed as malaria, diarrhoeal trouble, etc. We also recognize that many typical cases are not reported owing to thoughtlessness and disregard of the law on the part of practitioners.

December—Six hundred and seventy-four cases were reported from 50 counties, with 79 deaths. In the corresponding month last year, 712 cases from 47 counties, with 66 deaths. The disease was reported as epidemic in Clark County, 15 cases; Daviess, 17; Delaware, 24; Martin, 17; Noble, 17; Parke, 18; Spencer, 26; Union, 25; Washington, 20.

DIPHTHERIA.

Diphtheria caused 402 deaths in 1906, or 61 less than the average (463) for the last seven years. January is the most fatal month, and July the least fatal. The gradual decrease of deaths from diphtheria is largely due to the more general and earlier use of anti-toxin, although the teachings and warnings of the health department must have had some good effect.

The tables giving the number of deaths by months and by ages, follow herewith:

DIPHTHERIA.

CHART 13

DIARRHOEAL DISEASES.

The diarrhoeal deaths under five years of age numbered 1,823, which is 83 more than the average for the last seven years. That diarrhoeal diseases are fatal mostly in infancy and old age plainly appears in the table following.

The tables and charts show the status of the disease under the conditions and for the periods and ages stated:

DIARRHOEAL DISEASES, UNDER FIVE YEARS OF AGE.

CHART 16

INFLUENZA.

Influenza caused 224 deaths in 1906, which is a large decrease as compared with the average (477) for the last seven years. However, the disease existed, but not in epidemic form, in every county in the state, deaths occurring in 73 counties. The northern sanitary section was freer from the disease and had fewer deaths than either the central or southern section. The tables and charts herewith show the status of the disease:

CHART 18

SMALLPOX.

This disease prevailed throughout the year, but usually in very mild form. It was epidemic in a few localities, as shown in the monthly analyses appended. The deaths numbered 8, as against 35 in 1905, said deaths occurring, two in Marion County, four in Jefferson County, and two in Sullivan County.

SMALLPOX.

MONTHLY ANALYSIS.

Eighty cases of smallpox were reported in 10 counties, namely: Allen, 52; Elkhart, 1; Kosciusko, 2; Lawrence, 1; Scott, 4; Switzerland, 9; Tippecanoe, 2; Wayne, 1; Whitley, 1. There were no deaths from this disease during the month. The epidemic in Allen County presented no severe cases and no deaths. In the corresponding month last year 238 cases of smallpox, with 7 deaths in 27 counties, were reported.

February—One hundred and fifty-two cases of smallpox were reported in 15 counties, with no deaths. In the corresponding month last year, 381 cases in 35 counties, with 8 deaths. In the preceding month, 80 cases in 10 counties, with no deaths. The disease was epidemic at Fort Wayne in Allen County—62 cases in all. It was also epidemic in one locality in Cass County, 5 cases; epidemic in Clark, 17 cases; epidemic in Crawford, 16 cases; epidemic in Floyd, 14 cases; in Fulton, 8 cases, somewhat distributed; Howard, 5 cases, somewhat distributed; Jackson, 3 cases in one locality; Jay, 1 case; Miami, 5; Perry, 2; Putnam, 1; Switzerland, 5; Tippecanoe, 1; Wells, 1.

March—One hundred and twenty-four cases were reported in 16 counties, with no deaths. In the corresponding month last year, 251 cases in 29 counties, with one death. In the preceding month, 152 cases in 15 counties, with no deaths. The disease continued epidemic from last month in Allen County, 38 cases being reported. It was also epidemic in Clark, 8 cases; Crawford, 16; Floyd, 13; La-porte, 14; Miami, 8; Whitley, 10. In other counties the cases were: Boone, 1; Clinton, 1; Fulton, 3; Greene, 1; Marion, 7; Martin, 1; Putnam, 1; Spencer, 1; Vigo, 1.

April—Ninety-seven cases reported from 11 counties, with no deaths. In the corresponding month last year, 151 cases in 18 counties, with 4 deaths. In the preceding month, 124 cases in 16 counties, with no deaths. The disease was epidemic in mild form in the following counties: Adams, 15; Allen, 20; Clark, 18; Floyd, 7; Huntington, 7; Marion, 9; Miami, 15. A few cases not epidemic occurred in the following counties: Clinton, 1; Daviess, 1; Greene, 3; Howard, 7.

May—One hundred and twelve cases reported from 14 counties, with no deaths. In the corresponding month last year, 125 cases of smallpox were reported from 11 counties, with 2 deaths. The counties reporting this disease were as follows: Adams, 10; Allen, 44; Clark, 10; Crawford, 2; Fayette, 1; Floyd, 12; Fulton, 1; Henry, 1; Marion, 4; Miami, 2; Putnam, 1; Vanderburgh, 5; Vigo, 1; Washington, 20.

June—Sixty-three cases reported from eight counties, with no deaths. In the corresponding month last year, 114 cases in 13 counties, with 4 deaths. In the preceding month, 112 cases in 14 counties, with no deaths. The disease was epidemic in Adams County, 14 cases; Allen, 17 cases; Miami, 11 cases; Shelby, 10 cases. Other counties had the following number of cases: Carroll, 2; Floyd, 2; Grant, 2; Jay, 9; Vigo, 2. All of the cases reported were very mild. In no instance was it reported in severe form.

July—Eighteen cases reported from six counties, with one death. The said death was an infant three days old, which was born broken out with the disease. The mother had recovered from a mild attack and had been dismissed from the pest house in Jefferson County. The following counties reported the disease present: Allen, 9 cases; Clark, 1; Jay, 2; Jefferson, 2 cases and 1 death; Shelby, 4, and Vanderburgh, 6. It is very probable this does not represent all of the cases, for we are certain scores of cases of mild smallpox have occurred during this month. In Pulaski County, at Monterey, 100 cases of a mild eruptive disease have occurred. Many phy-

sicians unhesitatingly pronounced this smallpox, while others have termed it "mixed infection." The cases are so mild, and as no deaths have occurred, it has been impossible to establish effective quarantine or to induce the people to vaccinate.

August—Forty cases reported from three counties, with no deaths. The following counties reported the disease present: Fulton, 10 cases; Miami, 10 cases; Pulaski, 20 cases. It is very certain this does not represent all of the cases, for, without doubt, many mild attacks have escaped diagnosis. After seven years of smallpox in the state, very many physicians are found who fail to diagnose the disease in mild form.

September—Fifty-one cases reported from ten counties, with two deaths. The counties reporting the disease present were: Fulton, 6 cases; Jefferson, 16; Johnson, 1; Miami, 4; Montgomery, 3; Shelby, 5; Starke, 6; St. Joseph, 1; Sullivan, 8, with two deaths; Wabash, 1 case. We are again compelled to remark that these figures do not tell the whole story except as to deaths, for, without doubt, many mild attacks have escaped diagnosis and many people have had the disease without even seeing a physician.

October—There were 118 cases reported from nine counties, with three deaths. In the same month last year there were no cases of smallpox, and of course no deaths. The counties reporting the disease present this month were: Allen, 2 cases; Delaware, 1; Fulton, 3; Jefferson, 61; Lagrange, 8; Miami, 3; Ripley, 1; St. Joseph, 28; Vigo, 1. The three deaths occurred in Jefferson County. As remarked every month, it is true that there were cases of this disease which were never reported.

November—There were 216 cases reported from 14 counties, with no deaths. In the same month last year there were 112 cases in 13 counties, with 1 death. The following counties reported the disease present: Clark, 1 case; Daviess, 1; Fulton, 3; Grant, 2; Henry, 1; Jefferson, 83; Jennings, 1; Marshall, 4; Miami, 60; Pulaski, 17; Ripley, 2; Starke, 6; St. Joseph, 33. Although seven years have elapsed since smallpox first appeared in this state, and although it has been present every week in the state in that time, still there are physicians who can not diagnose this disease when it appears in mild form. Mistakes in this respect seem no fewer than were made seven years ago.

December—There were 393 cases reported from 19 counties, with 1 death. In the same month last year, 112 cases from 13 counties, with 1 death. There is a decided increase in cases and a slight increase in area of prevalence. The following counties reported the

disease as present: Allen, 1; Benton, 1; Cass, 2; Clark, 1; Daviess, 1; Elkhart, 2; Fulton, 65; Grant, 5; Howard, 2; Jasper, 2; Jefferson, 62; Marion, 5, and 1 death; Marshall, 8 cases; Miami, 62; Pulaski, 34; Starke, 16; St. Joseph, 12; Wabash, 3; Washington, 8.

VIOLENCE.

The violence deaths numbered 2,210, as against 2,050 in 1905. The term violence includes accidents, suicides and homicides. The accidental deaths numbered 1,836; the suicides, 281, and the homicides, 93. No deaths by mob violence in 1906, and but 1 in 1905. Steam cars, trolley cars and machinery killed 834.

The *Violence Chart* following compares the violence deaths with the average for the last seven years, and by it it appears there was a decided increase in violence deaths over preceding years.

VIOLENCE.

Comparison of 1906 with average of the last seven years:

- Average deaths per month for seven years, 1900-1906.
- - - - - Deaths per month for the year 1906.
- Eleven months show more than average.
- One month shows same as average.

MONTHLY RECORD OF VIOLENCE DEATHS.

January—Violence: Of the 122 deaths by violence, 5 were murders, all males and all killed by shooting. The suicides numbered 31, 12 being females and 19 males. Concerning the methods of suicide, 4 chose hanging, 3 males and 1 female; 1 chose drowning; 5 gunshots; 1 cutting throat; 12 carbolic acid; 4 morphine and the remainder by other poisons. Of the 196 accidental deaths, 76 were males and 20 females. Railroads caused the deaths of 31 males, and other causes were as follows: Fractures and crushing injuries, 17; gunshots, 6; burns and scalds, 11; drowning, 8; falls and falling objects, 9; mine accidents, 3; electricity, 3; suffocation and poisoning, the remainder.

February—The deaths by violence numbered 109—84 males and 25 females. There were 5 murders, 20 suicides and 89 accidental deaths. Of the 5 murders, 3 were males and 2 were females. Two of these were by gunshots, one by knife wound, one by homicide and one by blow on the head. Of the suicides, 14 were males and 6 females. The methods chosen were: 7 males, gunshots; 2 males, hanging; by opium and its compounds, 2 males and 4 females; chloral, 1 female; carbolic acid, 2 males and 1 female; not named, 1 male. Of the accidental deaths, 20 were caused by railroads, 2 by interurban trolley cars, 12 by crushing injuries, 19 by burns and scalds, 5 by gunshots, horses and vehicles, 1; explosions, 7; falling trees, 2; strangulation, 3; frozen to death, 1; dog bite, 1; poison by drugs, 3; not named, 8.

NOTE.—It will be observed that death rates this month in comparison with the preceding month are higher, although the number of deaths were fewer. This is because there were three more days in January than in February.

March—The deaths by violence numbered 112, 20 females and 92 males. Of the violence deaths, 7 were murders, 20 suicides and 94 accidents. Of the suicides, 9 chose gunshots, 3 hanging, 5 carbolic acid, 3 poisons. Of the accidental deaths, railroads caused 18; street cars and interurbans, 3; crushing injuries, 21; burns and scalds, 12; drowning, 6; gunshots, 8; mine accidents, 6; falls, 7; poisons, 6; other methods, 7.

April—The deaths by violence numbered 124, 85 males and 39 females. There were 2 murders, 28 suicides and 94 accidents. Seventeen were killed on steam railroads, 2 on interurbans, 19 by burns and scalds, 10 by drowning, 7 by asphyxiation, 3 by horses, and others in various ways.

May—Deaths by violence numbered 152, an increase over the preceding month of 28, and an increase of 12 over the corresponding month last year. Of the deaths by violence, 8 were murders, 25 suicides and the remainder accidental. Of the suicides, 9 chose carbolic acid, 3 morphine, 4 potash and other poisons, 4 gunshots, and 5 hanging. Of the accidental deaths, 14 were caused by railroads, 1 by trolley cars, 30 by crushing injuries, 11 by burns and scalds, 5 by gunshots, 13 by drowning, 5 by horses and vehicles, poisoning 12, lightning 4, rat-bite 1, not named 7.

June—The deaths by violence numbered 164. In the corresponding month last year, 160. There were 5 murders, 35 suicides, and the remainder accidental. Of the 5 murders, 1 was a woman. Of the suicides, 11 were males, and all chose gunshots; 4 chose hanging, 2 cutting throat, 1 stepping in front of train, and 17 various poisons. Of the accidental deaths, steam railroads killed 26; trolley cars, 5; drowning, 24; various crushing and falling injuries, 29; poisons, 4; horses and vehicles, 4; burns and scalds, 7; electricity, 2; lightning, 4; shooting and other causes, 13.

July—The violence deaths numbered 208. Of these 7 were murders, 13 suicides, and the remainder accidents. Of the murders, 5 were caused by gunshots and one by fracture of skull. Of the suicides, 1 chose gun; 2, hanging; 1, cutting throat; 1, drowning; 2, carbolic acid; 2, strychnine, and 4, morphine. Of the accidental deaths, 36 occurred on steam railroads and 4 on street cars and interurbans. Burns and scalds caused 18 deaths; drowning, 32; gunshots, 6; explosions, falls and like accidents, 39; horses and vehicles, 6; ptomaine poisoning, 3; other poisons, 5; suffocation, 7; lightning, 7; sunstroke, 8; mining accidents, 6; forceps delivery, 3. Cancer caused 108 deaths. This cause of death is recorded more frequently than typhoid fever, diphtheria and scarlet fever.

August—The violence deaths numbered 198. Of these, 7 were murders, 24 suicides, and the remainder accidental. Of the suicides 6 chose shooting and were all men; 7 chose carbolic acid, 2 men and 5 women; 3 chose morphine; 2, concentrated lye; 6, burning, drowning, hanging and cutting throat. Of the accidental deaths, 42 were caused by steam railroads; 4 by trolley cars; 19, crushing injuries; 9, burns and scalds; 8, gunshots; drowning, 25; falls, 11; falling objects, 2; horses and vehicles, 7; lightning and electricity, 9; machinery, 4; sunstroke and heat exhaustion, 5; and the remainder in various ways.

September—The violence deaths numbered 195, against 198 in the preceding month. Of these, 15 were murders, 26 suicides and the

remainder accidental. Of the murders, 3 were females and 12 males. Four were killed by blows, fractured skull following; 7 by gunshots and 4 in various other ways. Of the suicides, 5 chose morphine, 3 women and 2 men; 3 chose carbolic acid, 2 women and 1 man; 6 chose hanging, 2 women and 4 men; 7 chose shooting, 1 woman and 6 men; the remainder chose other methods. Of the accidental deaths, 36 were caused by steam cars, 4 females and 32 males; 7 were caused by street cars and interurbans, 1 female and 6 males; 13 were caused by burns and scalds, 10 females and 3 males; 6 were caused by gunshots, 2 females and 4 males; 32 were killed by various other accidents—8 by horses and vehicles, 8 by suffocation, 11 by drowning, 8 by electricity and lightning, 7 by poison with chemicals, 8 by ptomaine poisons, 1 by headache tablets, and the remainder in various ways.

October—The violence deaths numbered 179. In the corresponding month last year, 155 deaths. The causes were as follows: Seven murders, 22 suicides, and the remainder accidents. Of the suicides, 2 chose hanging, 5 gunshots, 1 asphyxiation, 1 strychnine, 1 cutting, the rest using various methods. The railroads killed 35; trolleys and interurbans, 4; crushing injuries, 18; burns and scalds, 8; fire, gas and powder, 9; drowning, 7; gunshots, 12; mining accidents, 4; falls, 15; horses and vehicles, 8; strangulation, suffocation and other causes killed the remainder.

November—The violence deaths numbered 184. In the corresponding month last year, 159. The causes were as follows: Murders, 7; suicides, 32; accidents, 145. Of the suicides, 4 chose gunshots; 3, cutting; 8, hanging; 1, drowning; 5, carbolic acid; 2, arsenic; 4, morphine; 4, other poisons; 1, artificial gas. Of the accidental deaths, steam railroads killed 41, street cars and interurban cars, 4; fractures of skulls, of large bones and crushing injuries, 16; burns and scalds, 30; gunshots, 8; drowning, 4; falls, 12; mining, 2; machinery, 3; suffocation and strangulation, 7; asphyxiation and artificial gas, 2; electricity, 5; vehicles, 2; poison, 7; hanging, 1.

December—The violence deaths numbered 185. In the corresponding month last year, 137. The causes were as follows: Murder, 11; suicides, 28; accidental, 146. Of the murders, gunshots, 8; stabbing, 3. Of the suicides, arsenic, 3; morphine, 4; carbolic acid, 7; shooting, 5; cutting throat, 2; hanging, 4; drowning, 2; jumping from high window, 1. Of the accidental, steam railroads killed 40; street cars and interurbans, 7; crushing injuries, 14; machinery, 7; burns and scalds, 14; gunshots, 16; drowning, 4; falls, 11; horses and vehicles, 3; asphyxiation, 11; mining, 4, and the remainder by various methods.

CANCER.

Cancer is an increasing cause of death in Indiana. The chart following shows this to be true. The number of cancer deaths in 1906 was 1,417, the rate being 53.5 per 100,000. Six years ago cancer and typhoid caused about the same number of deaths annually, but typhoid is now decreasing, the rate being 34.4 per 100,000, which is 19.1 less than the cancer rate. The cancer, tuberculosis and typhoid map on page — shows the ratio of cancer by congressional districts, and examination of the same will discover the fact that cancer prevails to a greater degree in the northern centers than in the central or southern.

CANCER.

Comparison of 1906 with average of the last seven years:

- Average deaths per month for seven years, 1900-1906
 - - - - - Deaths per month for the year 1906.
 Seven months show more than average.
 Four months show less than average.
 One month shows same as average.

MONTHLY ANALYSIS OF DISEASE PREVALENCE.

January—The most prevalent maladies were bronchitis and tonsilitis. Influenza was most prevalent in January of last year. Pneumonia, which had second place in January, 1905, has fourth place this January. The order of prevalence was as follows: Bronchitis, tonsilitis, rheumatism, pneumonia, scarlet fever, influenza, typhoid fever (enteric), diphtheria and membranous croup, pleuritis, diarrhoea, whooping cough, intermittent and remittent fever, erysipelas, measles, inflammation of bowels, typho-malaria fever, cerebro-spinal meningitis, cholera morbus, dysentery, smallpox, puerperal fever, cholera infantum.

February—The most prevalent malady was pneumonia; 78 per cent. of the regular observers testified to this effect. Pneumonia was fourth in area of prevalence in the preceding month. In the corresponding month last year, pneumonia was second in area of prevalence. The order of prevalence was as follows: Pneumonia, tonsilitis, bronchitis, rheumatism, influenza, scarlet fever, pleuritis, typhoid fever (enteric), diphtheria and membranous croup, whooping cough, intermittent and remittent fever, diarrhoea, erysipelas, measles, inflammation of bowels, smallpox, dysentery, puerperal fever, typho-malaria fever, cholera morbus, cerebro-spinal meningitis, cholera infantum.

March—The most prevalent malady was tonsilitis. Pneumonia was reported as the most prevalent in the preceding month. In the corresponding month last year influenza led as most prevalent. The order of prevalence was as follows: Tonsilitis, pneumonia, bronchitis, influenza, rheumatism, pleuritis, whooping cough, scarlet fever, typhoid fever (enteric), intermittent fever, diarrhoeal, erysipelas, measles, diphtheria and membranous croup, smallpox, puerperal fever, inflammation of bowels, typho-malaria fever, cerebro-spinal meningitis, dysentery, cholera morbus, cholera infantum.

April—The most prevalent malady was tonsilitis. This was also the case in the preceding month. The order of prevalence was as follows: Tonsilitis, rheumatism, pneumonia, bronchitis, influenza, scarlet fever, whooping cough, intermittent and remittent fever, measles, pleuritis, diarrhoea, typhoid fever (enteric), erysipelas, diphtheria and membranous croup, inflammation of bowels, cerebro-spinal meningitis, typho-malarial fever, smallpox, cholera morbus, puerperal fever, dysentery, cholera infantum.

May—Rheumatism was reported as the most prevalent malady. Tonsilitis was reported first in the preceding month. The order of prevalence was as follows: Rheumatism, tonsilitis, bronchitis, diar-

rhoea, whooping cough, influenza, measles, scarlet fever, intermittent and remittent fever, typhoid fever (enteric), pneumonia, pleuritis, inflammation of bowels, erysipelas, diphtheria and membranous croup, cholera morbus, smallpox, dysentery, cholera infantum, typho-malaria fever, cerebro-spinal meningitis, puerperal fever.

June—The most prevalent malady was rheumatism, which was also most prevalent in the corresponding month last year. In the preceding month, tonsilitis was first. The order of prevalence was as follows: Rheumatism, diarrhoea, tonsilitis, bronchitis, intermittent and remittent fever, cholera morbus, typhoid fever (enteric), scarlet fever, whooping cough, cholera infantum, dysentery, measles, inflammation of bowels, pneumonia, pleuritis, diphtheria and membranous croup, influenza, erysipelas, smallpox, typho-malaria fever, cerebro-spinal meningitis, puerperal fever.

July—The most prevalent malady was diarrhoea. Rheumatism was most prevalent in both May and June. Cholera morbus, which was seventh in June, rose to sixth place in July. The order of prevalence was as follows: Diarrhoea, cholera morbus, tonsilitis, rheumatism, dysentery, cholera infantum, typhoid fever (enteric), intermittent and remittent fever, inflammation of bowels, bronchitis, scarlet fever, whooping cough, diphtheria and membranous croup, erysipelas, pleuritis, typho-malarial fever, pneumonia, measles, influenza, cerebro-spinal meningitis, smallpox, puerperal fever.

August—The most prevalent malady was diarrhoea, as was also the case in the preceding month. Rheumatism, which was most prevalent in May and June, falls to fifth place in August. The order of prevalence was as follows: Diarrhoea, cholera morbus, typhoid fever (enteric), cholera infantum, rheumatism, tonsilitis, dysentery, intermittent and remittent fever, bronchitis, inflammation of bowels, scarlet fever, typho-malaria fever, influenza, diphtheria and membranous croup, pleuritis, pneumonia, whooping cough, erysipelas, cerebro-spinal meningitis, measles, puerperal fever, smallpox.

September—The most prevalent malady was cerebro-spinal meningitis. Rheumatism was reported as very prevalent. The order of prevalence was as follows: Cerebro-spinal meningitis, rheumatism, tonsilitis, diarrhoea, typhoid fever (enteric), cholera morbus, cholera infantum, bronchitis, dysentery, intermittent and remittent fever, diphtheria and membranous croup, inflammation of bowels, pneumonia, scarlet fever, influenza, typho-malarial fever, pleuritis, erysipelas, smallpox, whooping cough, measles, puerperal fever.

October—The most prevalent malady was tonsilitis, as against rheumatism in the preceding month and against typhoid fever in the corresponding month last year. Typhoid fever was second in prevalence. The order of prevalence was as follows: Tonsilitis, typhoid fever, rheumatism, bronchitis, diphtheria and membranous croup, intermittent and remittent fever, scarlet fever, influenza, diarrhoea, pneumonia, pleuritis, inflammation of the bowels, erysipelas, typho-malaria fever, cholera infantum, cholera morbus, dysentery, whooping cough, smallpox, measles, cerebro-spinal meningitis and puerperal fever.

November—The most prevalent maladies were tonsilitis and bronchitis, as against tonsilitis and typhoid fever in the preceding month. Bronchitis and tonsilitis were also the most prevalent diseases in the corresponding month last year. The order of prevalence was as follows: Tonsilitis, bronchitis, rheumatism, pneumonia, typhoid fever (enteric), influenza, diphtheria and membranous croup, intermittent and remittent fever, scarlet fever, pleuritis, diarrhoea, erysipelas, inflammation of the bowels, whooping cough, typho-malaria fever, smallpox, dysentery, measles, cholera infantum, cerebro-spinal meningitis, cholera morbus, puerperal fever.

December—As in the preceding month, tonsilitis and bronchitis were the most prevalent maladies. Indeed, there is little change in December as compared with November in regard to disease prevalence. The order of prevalence was as follows: Tonsilitis, bronchitis, rheumatism, pneumonia, influenza, typhoid fever (enteric), diphtheria and membranous croup, pleuritis, scarlet fever, diarrhoea, intermittent and remittent fever, erysipelas, measles, inflammation of the bowels, smallpox, whooping cough, typho-malaria fever, dysentery, cholera morbus, cerebro-spinal meningitis, cholera infantum.

TABLES

OF

ANNUAL STATISTICAL REPORT

FOR THE YEAR 1906.

TABLE 1.

Deaths in Indiana During the Year Ending December 31, 1906, Statistically Classified by the International System, with Rates Per 100,000 Population, Estimated According to United States Census Bureau.

Classification Number.	CAUSES OF DEATH.	Number of Deaths.	Death Rate Per 100,000.
I. GENERAL DISEASES—EPIDEMICS.			
1	Typhoid fever.....	913	34.4
2	Exanthematous typhus.....		
3	Recurrent fever.....		
4	Intermittent and malarial fever.....	102	3.8
5	Variola or smallpox.....	8	.3
6	Measles.....	23	.8
7	Scarlatina.....	101	3.8
8	Whooping cough.....	157	5.9
9	Croup.....	24	.9
9a	Diphtheria.....	378	14.2
10	Influenza.....	224	8.4
11	Miliary fever.....		
12	Asiatic cholera.....	18	.6
13	Cholera nostras.....		
14	Dysentery.....	235	8.8
15	Bubonic plague.....		
16	Yellow fever.....		
17	Leprosy.....		
18	Erysipelas.....	86	3.2
19	Other epidemic diseases.....	7	.2
20	Purulent septicemia and infection.....	227	8.5
21	Glanders and farcy.....		
22	Malignant pustule and anthrax.....		
23	Rabies.....	5	.1
24	Actinomycosis trichinosis, etc.....	2	.07
25	Pellegra.....		
26	Tuberculosis of the larynx.....	58	2.1
27	Tuberculosis of the lungs.....	3,796	143.2
28	Tuberculosis of the meninges.....	185	6.9
29	Abdominal tuberculosis.....	234	8.8
30	Potts' disease.....	19	.7
31	Cold abscess.....	13	.1
32	White swelling.....	17	.6
33	Other tuberculous affections.....	67	2.5
34	General tuberculosis.....	77	2.9

TABLE 1—Continued.

Classification Number.	CAUSES OF DEATH.	Number of Deaths.	Death Rate Per 100,000.
35	Scrofula.....	12	.4
36	Syphilis.....	75	2.8
36a	Soft chancre.....		
37	Gonorrhea (5 years and over).....	2	.07
38	Gonorrhea (under 5 years).....	1	.03
39	Cancer and other tumors of the buccal cavity.....	57	2.1
40	Cancer and other tumors of the stomach and liver.....	504	19.0
41	Cancer and other tumors of the peritoneum, intestines and rectum.....	133	5.0
42	Cancer and other tumors of the female genital organs.....	213	8.0
43	Cancer and other tumors of the breast.....	118	4.4
44	Cancer and other tumors of the skin.....	91	3.4
45	Cancer and other tumors of other organs.....	301	11.3
46	Other tumors.....	39	1.4
47	Acute articular rheumatism.....	145	5.4
48	Chronic rheumatism and gout.....	129	4.8
49	Scurvy.....	5	.1
50	Diabetes.....	269	10.1
51	Exophthalmic goitre.....	22	.8
52	Addison's disease.....	11	.4
53	Leukemia.....	23	.8
54	Anemia chlorosis.....	93	3.5
55	Other general diseases.....	33	1.2
56	Alcoholism, acute and chronic.....	96	3.6
57	Chronic lead poisoning.....	2	.07
58	Other chronic poisonings (occupational).....	1	.03
59	Other chronic poisonings.....	13	.4
II. LOCAL DISEASES—DISEASES OF THE NERVOUS SYSTEM AND ORGANS OF SPECIAL SENSE.			
60	Encephalitis.....	78	2.9
61	Simple meningitis.....	240	9.0
61a	Epidemic cerebro-spinal meningitis.....	481	18.1
62	Progressive locomotor ataxia.....	58	2.1
63	Other diseases of the spinal cord.....	136	5.1
64	Congestion and hemorrhage of the brain.....	1,496	56.4
65	Softening of the brain.....	102	3.8
66	Paralysis, cause unspecified.....	777	29.3
67	General paralysis.....	87	3.2
68	Other forms of insanity.....	81	3.0
69	Epilepsy.....	130	4.9
70	Convulsions (not puerperal).....	14	.5
71	Convulsions of infants.....	254	9.5
72	Tetanus.....	64	2.4
73	Chorea.....	7	.2
74	Other nervous diseases.....	134	5.0
75	Diseases of the eye.....	1	.03
76	Diseases of the ear.....	16	.6
III. DISEASES OF THE CIRCULATORY SYSTEM.			
77	Pericarditis.....	58	2.1
78	Acute endocarditis.....	105	3.9
79	Organic heart diseases.....	2,208	83.3
80	Angina pectoris.....	243	9.1
81	Diseases of the arteries, atheroma, aneurism, etc.....	239	9.0
82	Embolism and thrombosis.....	59	2.2
83	Diseases of the veins (varices, hemorrhoids, phlebitis).....	12	.4
84	Diseases of the lymphatics, lymphangitis, etc.....	4	.1
85	Hemorrhage.....	47	1.7
86	Other diseases of the circulatory system.....	1	.03

TABLE 1—Continued.

Classification Number.	CAUSES OF DEATH.	Number of Deaths.	Death Rate Per 100,000.
IV. DISEASES OF THE RESPIRATORY SYSTEM.			
87	Diseases of the nasal fossae.....	4	.1
88	Diseases of the larynx.....	39	1.4
89	Diseases of the thyroid body.....	6	.2
90	Acute bronchitis.....	265	10.0
91	Chronic bronchitis.....	195	7.3
92	Broncho-pneumonia.....	576	21.7
93	Pneumonia.....	2,478	93.5
94	Pleurisy.....	74	2.7
95	Congestion and apoplexy of the lungs.....	338	12.7
96	Gangrene of the lungs.....	10	.3
97	Asthma.....	105	3.9
98	Pulmonary emphysema.....	5	.1
99	Other diseases of the respiratory system (phthisis excepted).....	107	4.0
V. DISEASES OF THE DIGESTIVE SYSTEM.			
100	Diseases of the mouth and adnexa.....	24	.9
101	Diseases of the pharynx.....	42	1.5
102	Diseases of the esophagus.....	6	.2
103	Ulcer of the stomach.....	69	2.6
104	Other diseases of the stomach (cancer excepted).....	630	23.7
105	Diarrhoea and enteritis (under 5 years of age).....	1,823	68.8
105a	Chronic diarrhoea.....	115	4.3
106	Diarrhoea and enteritis (five years and over).....	327	12.3
107	Intestinal parasites.....	4	.1
108	Hernia and intestinal obstructions.....	295	11.1
109	Other diseases of the intestines.....	140	5.2
110	Acute yellow atrophy of the liver.....	4	.1
111	Hyatid tumors of the liver.....	261	9.8
112	Cirrhosis of the liver.....	74	2.7
113	Biliary calculi.....	252	9.5
114	Other diseases of the liver.....	9	.3
115	Diseases of the spleen.....	265	10.0
116	Simple peritonitis (not puerperal).....	4	.1
117	Other diseases of the digestive system.....	174	6.5
118	Appendicitis and abscess of the iliac fossae.....		
VI. DISEASES OF THE GENITO-URINARY SYSTEM.			
119	Acute nephritis.....	230	8.6
120	Bright's disease.....	1,549	58.4
121	Other diseases of the kidneys and their adnexa.....	55	2.0
122	Calculi of the urinary tract.....	8	.3
123	Diseases of the bladder.....	102	3.8
124	Diseases of the urethra.....	6	.2
125	Diseases of the prostate.....	57	2.1
126	Diseases of the male genital organs.....		
127	Metritis.....	4	.1
128	Uterine hemorrhage (non-puerperal).....	7	.2
129	Uterine tumor.....	29	1.0
130	Other diseases of the uterus.....	32	1.2
131	Cysts and other ovarian tumors.....	19	.7
132	Other diseases of the female genital organs.....	20	.7
133	Non-puerperal diseases of the breast.....	1	.03
VII. PUERPERAL DISEASES.			
134	Accidents of pregnancy.....	44	1.6
135	Puerperal hemorrhage.....	23	.8
136	Other accidents of labor.....	14	.5
137	Puerperal septicemia.....	145	5.4

TABLE 1—Continued.

Classification Number.	CAUSES OF DEATH.	Number of Deaths.	Death Rate Per 100,000.
138	Albuminuria and puerperal eclampsia.....	61	2.3
139	Phlegmasia alba dolens, puerperal.....	1	.03
140	Other puerperal accidents.....	31	1.1
141	Puerperal diseases of the breast.....		
VIII. DISEASES OF THE SKIN AND CELLULAR TISSUES.			
142	Gangrene.....	113	4.2
143	Carbuncle.....	14	.5
144	Acute abscess phlegmon.....	22	.8
145	Other diseases of the skin and adnexa.....	21	.7
IX. DISEASES OF THE LOCOMOTOR SYSTEM.			
146	Affections of the bones.....	39	1.4
147	Arthritis and other diseases of the joints.....	3	.1
148	Amputation.....	1	.03
149	Other diseases of the organs of locomotion.....		
X. MALFORMATIONS.			
150	Malformations.....	284	10.7
XI. DISEASES OF INFANCY.			
151	Congenital debility, icterus.....	1,143	43.1
152	Other diseases of early infancy.....	73	2.7
153	Lack of care.....	550	20.7
XII. DISEASES OF OLD AGE.			
154	Senile debility.....	1,280	47.1
XIII. EXTERNAL CAUSES.			
A.—Suicides.			
155	Suicide by poison.....	139	5.2
156	Asphyxia.....	3	.1
157	Hanging or strangulation.....	49	1.8
158	Drowning.....	13	.4
159	Firearms.....	82	3.0
160	Cutting instruments.....	14	.5
161	Jumping from high places.....	1	.03
162	Crushing.....		
163	Other suicides.....	20	.7
B.—Accidents.			
164	Fractures.....	254	9.5
165	Dislocations.....	4	.1
166	Other accidental injuries.....	834	31.4
167	Burns and scalds.....	216	8.1
168	Burning by corrosive substances.....		
169	Sunstroke.....	22	.8
170	Freezing.....	5	.1
171	Electrical shock.....	45	1.6
172	Accidental drowning.....	159	6.0
173	Inanition.....	138	5.2
174	Inhalation of noxious gases (not suicidal).....	20	.7
175	Other acute poisonings.....	102	3.8
176	Other external violence.....	135	5.0
C.—Homicides.			
176a	Homicide.....	93	3.5
176b	Mob violence.....		

TABLE 1—Continued.

Classification Number.	CAUSES OF DEATH.	Number of Deaths.	Death Rate Per 100,000.
	XIV. CAUSES ILL-DEFINED.		
177	Dropsy.....	106	4.0
178	Sudden death (not puerperal).....	4	.1
179	Causes not specified or ill-defined.....	198	7.4
	XV. STILLBIRTHS.		
180	Stillbirths.....	2,149	81.1
	All causes.....	35,992	1,358.9

25. Pellagra.....	4	8	11	6	5	6	3	1	253	6	2	6
26. Tuberculosis of the larynx.....	355	341	380	380	332	276	281	311	1	283	300	304
27. Tuberculosis of the lungs.....	20	18	16	25	26	11	10	13	8	15	15	18
28. Tuberculosis of the meninges.....	23	11	24	16	15	21	17	26	27	12	15	
29. Abdominal tuberculosis.....												
30. Pot's disease.....	2	1	1	1	1	2	1	2	2	4		2
31. Cold abscess.....												
32. White swelling.....	1	3		2	3	2	2	2				
33. Tuberculosis of other organs.....	7	3	5	5	6	5	10	4	6	7	7	2
34. General tuberculosis.....	3	9	6	4	10	8	4	8	11	2	6	6
35. Scrofula.....		1	1	1	1	3		2	1			2
36. Syphilis.....		6	7	9	6	4	10	6	3	5	8	7
37. Soft chancre.....				1								
38. Gonorrhea (5 years and over).....				1						1		
38. Gonorrhea (under 5 years).....		1										
39. Cancer and other tumors of the buccal cavity.....	3		7	8	10	2	4	6	5	4	4	4
40. Cancer and other tumors of the stomach and liver.....	42	29	44	50	46	43	41	43	37	46	33	50
41. Cancer and other tumors of the peritoneum, intestines and rectum.....	12	8	6	13	9	8	12	19	11	14	6	15
42. Cancer and other tumors of the female genital organs.....	19	23	15	20	20	13	16	18	10	22	19	18
43. Cancer and other tumors of the breast.....	11	5	15	9	16	6	11	17	8	5	8	7
44. Cancer and other tumors of the skin.....	7	5	8	12	14	9	6	9	8	3	2	8
45. Cancer and other tumors of other organs.....	29	29	31	23	29	18	27	26	27	29	17	16
46. Other tumors.....		2	3	2	4	3	4	6	7	6	2	
47. Acute articular rheumatism.....	8	3	16	22	18	19	5	9	10	12		17
48. Chronic rheumatism and gout.....	12	14	11	16	17	10	9	8	5	13	6	8
49. Scurvy.....		1	1				1	25	22		2	
50. Diabetes.....	23	25	22	20	24	18	27	3	3	14	30	19
51. Exophthalmic goitre.....	3	1	3	1	1	3	2	3	3	2	1	1
52. Addison's disease.....	1		3	2	1		2	2				
53. Leukemia.....		1	2	3	2	1	5		1	3	1	4
54. Anemia, chlorosis.....	7	9	8	8	9	6	7	7	6	9	11	6
55. Other general diseases.....	1	2	2	7		2	4	1	5	4	2	3
56. Alcoholism, acute and chronic.....	6	7	3	10	8	9	5	8	11	8	14	7
57. Chronic lead poisoning.....				1				1				
58. Other chronic poisonings (occupational).....			1									
59. Other chronic poisonings.....	1	1	3				1		1	1	1	4
II. DISEASES OF THE NERVOUS SYSTEM AND ORGANS OF SENSE.												
60. Encephalitis.....	6	9	5	4	9	5	6	12	10	4	5	3
61. Simple meningitis.....	21	17	23	22	17	13	13	23	12	26	34	19

161. Jumping from high places.....										1								
162. Crushing.....																		
163. Other Suicides.....								1	2	1	1	1	2	2	3	1		3

TABLE No. 2—Continued.

Deaths from all Causes by Months, Ages, Color, Nationality and Condition, for the Year Ending December 31, 1906. International Classification.

	70 to 75.	75 to 80.	80 to 90.	90 and over.	Unknown.	White.	Colored.	American.	Foreign.	Not Reported.	Single.	Married.	Widowed.	Not Reported.	Total.
I. GENERAL DISEASES. EPIDEMIC.															
1. Typhoid fever.....	10	15	8		5	886	27	860	45	8	499	366	39	9	913
2. Exanthematous typhus.....															
3. Recurrent fever.....															
4. Intermittent and malarial fever.....	3	11	9	1		94	8	91	10	1	41	39	20	2	102
5. Variola or smallpox.....						6	2	8			7	1			8
6. Measles.....						23		23			21	2			23
7. Scarletina.....						101		99	1	1	93	8			101
8. Whooping cough.....						144	13	157			155	2			157
9. Croup.....						21	3	24			24				24
9a. Diphtheria.....					1	376	2	373	4	1	373	5			378
10. Influenza.....	31	31	43	8	2	212	12	189	32	3	55	80	83	6	224
11. Miliary fever.....															
12. Asiatic cholera.....															
13. Cholera nostras.....		2	3	1	1	18		17		1	4	8	6		18
14. Dysentery.....	31	40	57	9		229	6	200	32	3	27	94	107	7	235
15. Bubonic plague.....															
16. Yellow fever.....															
17. Leprosy.....															
18. Frisipelas.....	8	7	9	1		85	1	76	8	2	37	35	14		86
19. Other epidemic diseases.....						7		7			6	1			7
20. Purulent septicemia and infection.....	13	7	10	1	1	217	10	200	22	5	81	112	30	4	227
21. Glanders and farcy.....															
22. Malignant pustule and anthrax.....															
23. Rabies.....						5		5			3	2			5
24. Actinomycosis, trichinosis, etc.....			1		1	2		1	1		1		1		2

25. Pellagra.....	1	2				56	2	52	5	1	17	34	7	58
26. Tuberculosis of the larynx.....	102	74	4	23	3,530	266	3,515	244	244	37	1,413	1,896	452	3,796
27. Tuberculosis of the lungs.....					172	13	184	1	184		167	12	6	185
28. Tuberculosis of the meninges.....	10	9	3		219	13	222	8	222	4	99	102	29	234
29. Abdominal tuberculosis.....														
30. Pott's disease.....					18	1	19				13	5	1	19
31. Cold abscess.....	1				3		2	1					3	3
32. White swelling.....					15	2	17				9	7	1	17
33. Tuberculosis of other organs.....	7	1			62	5	60	6	6	1	23	27	14	67
34. General tuberculosis.....	1	1			71	6	75	2	75		43	25	8	77
35. Scrofula.....					12		12		12		11	1		12
36. Syphilis.....					63	12	72	2	72	1	56	12	7	75
36a. Soft chancre.....					2									
37. Gonorrhea (5 years and over).....					2		2							2
38. Gonorrhea (under 5 years).....					1		1				1		1	1
39. Cancer and other tumors of the buccal cavity.....	6	11			56	1	46	11	46		4	35	18	57
40. Cancer and other tumors of the stomach and liver.....	84	52	28		496	8	397	102	102	5	40	313	147	504
41. Cancer and other tumors of the peritoneum, intestines and rectum.....														
42. Cancer and other tumors of the female genital organs.....	10	8	5	2	131	2	105	28	28		8	91	34	133
43. Cancer and other tumors of the breast.....	9	7	6	2	207	6	191	21	21	1	14	134	64	213
44. Cancer and other tumors of the skin.....					115	3	107	11	107		12	73	33	118
45. Cancer and other tumors of other organs.....	18	15	16	3	91		69	22	22		9	47	33	91
46. Other tumors.....	36	29	26	2	287	4	258	41	41	2	44	178	77	301
47. Acute articular rheumatism.....	1	7	2		37	2	33	6	6		7	17	15	39
48. Chronic rheumatism and gout.....	12	8	6	2	141	4	137	6	6	2	62	57	25	145
49. Scurvy.....	23	11	9	2	122	7	106	21	21	2	23	79	27	129
50. Diabetes.....	1	1			5		5				2	3		5
51. Exophthalmic goitre.....	29	20	10		266	3	223	44	44	2	49	164	54	269
52. Addison's disease.....	1	1			21	1	21				2	18	2	22
53. Leukemia.....	3				11		8	3	3		2	8	1	11
54. Anemia, chlorosis.....					23		20	3	3		9	9	5	23
55. Other general diseases.....	5	3	4		93		84	8	8	1	27	51	13	93

NINTH BIENNIAL REPORT

Of the Board of Trustees and
Medical Superintendent
of the

Eastern Indiana Hospital for the Insane

AT

EASTHAVEN, NEAR RICHMOND

FOR THE

Period Ending October 31, 1906

To the Governor

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING,
1906.

THE STATE OF INDIANA, }
EXECUTIVE DEPARTMENT, }
INDIANAPOLIS, Nov. 30, 1906. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE, }
INDIANAPOLIS, Dec. 11, 1906. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

NOVEMBER 23, 1906.

Returned by the Auditor of State, with the above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

FRED L. GEMMER,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 12, 1906.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer, December 12, 1906.

HARRY SLOUGH,
Clerk Printing Bureau.

EASTERN INDIANA HOSPITAL FOR THE INSANE.

1906.

BOARD OF TRUSTEES.

MINNIE YOUNG	Secretary.

BOARD OF TRUSTEES' REPORT.

HON. J. FRANK HANLY, *Governor of Indiana*:

Sir—In conformity with the requirement of the law, the Board of Trustees of the Eastern Indiana Hospital for the Insane respectfully submits the following report for the biennial period ending October 31, 1906:

At the beginning of the period, November 1, 1904, the members of the Board were Warren Bigler, Thomas A. Jones and Adam Heimberger. The term of Mr. Heimberger expired January 1, 1905, and Carroll K. McCullough of Anderson was appointed to succeed him by Governor Durbin. On January 1, 1906, Thomas A. Jones retired by reason of the expiration of his term of office and by your appointment Joseph L. Cowing of Rushville became his successor. Warren Bigler resigned in October, 1905, to become Auditor of State and the vacancy thus created was filled February 15, 1906, by your appointment of John Detamore of Portland. The organization of the Board then effected by the election of Carroll K. McCullough, President, John Detamore, Vice-President, and Joseph L. Cowing, Treasurer, has continued to this date.

FINANCES.

The funds provided for the support of the Institution were sufficient to enable us to maintain it in a highly creditable manner and to close each year of the fiscal period without indebtedness of any kind. There were three regular and separate funds, for maintenance, repairs and clothing, available for current expenses for each year, and these were applied as specified according to our best judgment, to the end that the inmates were maintained in the best possible manner, and the permanent improvements kept in a good state of repair. In the purchase of supplies the method of competition, as required by law, has been followed and the high quality of goods furnished under the contracts was assured by rigid inspection. The system in vogue of storage, requisitions,

inventories and condemnation of useless personal property is so well worked out and established and so strictly carried out day by day that we feel secure in the belief that all supplies serve the intended purpose; and we also are pleased to speak a word in commendation of its excellence.

The buildings and other permanent improvements are in good condition, except in a few instances elsewhere reported with recommendations for specific appropriations to permit major repairs and alterations to be made. The repair fund provided was \$5,000 for the first year and \$6,000 for the second year. It is our unanimous judgment that this fund should, with the increasing demands upon it for repairs as the building becomes older, be raised to \$7,500 annually.

The clothing fund of \$5,000 annually has been sufficient to supply a good quality of comfortable clothing for all patients dependent upon it. The grade of clothing has with economy been raised during the past year. No increase in this fund will be necessary for the ensuing period.

The specific funds have in the main permitted us to obtain the improvements contemplated by them. Some hardship was encountered, however, in their application by reason of the fact that they were available only during the past year of the period, which allotted an insufficient length of time, under existing business conditions, to enable all to be completed.

The fund of \$10,000 for improvements in the water supply permitted us to construct and put into service a much-needed water tower with necessary connections, which affords ample storage and a better water pressure for all purposes and in particular for fire protection. This fund was with your knowledge and approval anticipated by contracts made several months before it was available, thereby gaining the time actually necessary to carry out an improvement of such magnitude. The structure consists of a steel tower 16 feet in diameter and 110 feet high, resting on a concrete foundation 13 feet thick, 6 feet of which is above the grade line. The steel work is protected by a slightly wall of pressed brick. The cost of this improvement was \$10,000.

The work begun four years ago, of constructing sanitary tile floors in the toilet rooms, bath-rooms and sculleries throughout the

Institution, was continued under a specific appropriation. Such rooms in all the cottages, with the exception of three, have been completed and are now in very satisfactory condition. Another specific appropriation is recommended in order to enable similar rooms in the service building and three other cottages to be improved in like manner. The expenditures for this work were \$2,000.

A new and substantial barn and an additional root cellar were added to the permanent improvements of the farm at a cost of \$6,684.79. It was, also, the purpose to make certain needed improvements in the dairy barn, but there was insufficient time to make them, even had the balance of \$515.21 remaining in the fund been large enough to cover the cost. This balance was covered into the general fund of the State treasury.

The laundry equipment was improved by the addition of two improved washing machines and a hot water heater at a cost of \$1,131.96. A balance of \$268.04 in this fund was not used.

The specific appropriation of \$1,800 was applied for important alterations and small additions for clothing rooms in Cottages C and D and G and H, which have added much to the conveniences, sanitary conditions and the cheerfulness of these buildings.

The railway crossing, we regret to report, has not yet been made, although it has been under consideration for the past four years. The failure to make this improvement was due to our inability to reach any kind of an agreement with the Pennsylvania Company through whose right-of-way the crossing must go. Late last year the work was begun in the absence of an agreement, when it was stopped by a temporary restraining order issued by the Wayne Circuit Court at the instance of the railway company. Since the existing laws do not provide a method by which such a crossing as is needed by this Hospital may be made without the consent of the railway company, your aid is invoked in behalf of such legislation as may be necessary to permit the management of this and all other State institutions to secure any needed outlets from their premises by the assessment and payment of reasonable damages when the property of private citizens or corporations must be used. A balance of \$2,359.56 was covered into the general fund of the State treasury.

The fiscal exhibits in the appended report of the Medical Superintendent set forth in detail the receipts and disbursements, a summary of which follows:

FISCAL YEAR 1904-1905.

Drawn from State Treasury.....		\$126,856 63
Disbursed for maintenance	\$117,262 94	
Disbursed for repairs.....	4,988 07

For water supply.....	10,000 00
For farm buildings.....	6,684 79
For laundry equipment.....	1,131 96
For additions, cottages G and H, and C and D	1,800 00
For railway crossing.....	140 44

Total disbursements	\$21,757 19
Covered into general fund.....	3,142 81

Total	\$24,900 00	\$24,900 00
-------------	-------------	-------------

Earnings—

Receipts from sales, Exhibit 23.....		\$267 92
Covered into general fund.....	\$267 92	
Total	\$267 92	\$267 92

Balances covered into the general fund of the State Treasury on October 31, 1905, amounting to \$1,919.76; and on October 31, 1906, \$6,064.61. Of the latter sum \$2,921.80 were balances from the regular funds, and \$3,142.81 were unexpended specific funds.

	1904-5.	1905-6.
Cost per capita of maintenance.....	\$164 10	\$162 54
Cost per capita of repairs.....	6 98	8 16
Cost per capita of clothing.....	6 45	5 66
Total cost per capita.....	\$177 53	\$176 36

The inventory of property on October 31, 1906, shows a valuation of \$850,237.93.

GENERAL.

The enrollment of patients November 1, 1904, was 722; admitted during the period, 257; discharged, 146; died, 82; enrolled October 31, 1906, 739; and present October 31, 1906, 730.

The capacity was not increased during the period, and while rated normally at 712 beds, the daily average present was 731 throughout the past year. Some of the cottages are seriously overcrowded and there are about 200 insane persons in the Eastern District awaiting admission. It is, therefore, apparent that additional accommodations must in some way be provided. Some relief is promised by the Village for Epileptics, which was wisely authorized by the last Legislature, but this assistance can not be immediate. In order to receive some of the more urgent and hopeful cases now confined in jails and kept in private families with loss both to the patient and the family, we recommend the erection of two small cottages with attached diet kitchens. We make the recommendation with some reluctance because we fully agree with the judgment expressed by the Medical Superintendent that this institution can not be enlarged beyond its present limitations without loss in some direction, and that any further increase in its accommodations may seriously overburden some parts of the central plant. However, something must be done with promptness to meet a very pressing need, and we see no alternative. We, also, are in full accord with the recommendation of the Medical Superintendent favoring a plan of colonization as a feature of this Hospital, and which promises in the end the largest latitude for growth at the smallest outlay of funds, and it is therefore recommended for your careful consideration.

RECOMMENDATIONS.

We respectfully recommend the following appropriations for the ensuing biennial period:

Regular Funds—

1. \$121,000 annually for the maintenance of 725 patients and \$160 per capita for any excess.
2. \$7,500 annually for repairs.
3. \$5,000 annually for clothing.

Specific Funds—

- | | |
|--|----------|
| 1. For two cottages and appurtenances..... | \$60,000 |
| 2. For tile floors and plumbing..... | 2,000 |
| 3. For railway crossing..... | 2,500 |
| 4. For steam heating system..... | 5,000 |
| 5. For farm buildings..... | 2,000 |
| 6. For workshop | 2,000 |
| 7. For attics in two buildings..... | 1,800 |
| 8. For water supply..... | 2,500 |

At the end of another period in the history of this Hospital, we have much satisfaction in reporting it in good condition throughout. While the movement of population could not, on account of the physical limitations of the Hospital, include all of the demands made upon it, yet it has been as prompt and complete as was consistent with the best interests of the patients already within its care. The two years have been eminently satisfactory from the viewpoint of recovered and improved cases, and the general state of sanitation. Much good has been accomplished to many unfortunates. The organization is excellent, the discipline well maintained, and the general character of the service is a source of pride and comfort to us.

Respectfully submitted,

CARROLL K. M'CULLOUGH,
J. DETAMORE,
JOSEPH L. COWING,

Board of Trustees.

Easthaven, October 31, 1906.

MEDICAL SUPERINTENDENT'S REPORT.

To the Board of Trustees:

Gentlemen—I beg leave to submit the following report of the Hospital for the biennial period ending October 31, 1906:

MOVEMENT OF PATIENTS.

FISCAL YEAR 1904-1905.

Average number enrolled.....	356.41	392.96	749.37

MEDICAL HISTORY.

The highest number enrolled during the period was 760; the lowest, 714. The highest number present was 738; the lowest 701.

Since the opening of the Hospital, August 1, 1890, 2,442 patients have been admitted, of whom 248 were men and 1,194 were women. Of this number 568 were discharged recovered, 378 im-

proved, 53 unimproved, 11 idiotic, 16 not insane, 30 were transferred to other hospitals, and 635 died while under treatment.

The number under treatment during the first year of this period was 867—414 men and 453 women; during the second year 851—400 men and 451 women.

Admissions. During the first year there were 145 admissions—57 men and 88 women. Of these 71 were classified as presumably curable and 74 as incurable. Of the curable conditions 22, or 31 per cent., were cases of melancholia in acute forms; 38, or 53 per cent., were cases of mania in acute forms; 1 was a case of acute confusional insanity; and 10, or 14 per cent., were cases of toxic insanity. Of the incurable conditions, 32 were cases of chronic mania, 3 recurrent mania; 16 chronic dementia, 1 dementia with paralysis, 5 organic dementia, 5 paretic dementia, 10 paranoia, and 2 epileptic dementia.

During the second year there were admitted 47 men and 65 women, total 112. Of this number 64 were classified as presumably curable and 48 as incurable. Of the curable conditions 25, or 39 per cent., were cases of melancholia in acute forms; 36, or 56 per cent., were cases of mania in acute forms; 1, a case of acute confusional insanity; and 2 were cases of toxic insanity. Of the incurable conditions, 25 were cases of chronic mania, 3 recurrent mania, 6 chronic dementia, 5 organic dementia, 7 paretic dementia, and 2 paranoia.

Of the presumably curable cases admitted during the period 31, or 23 per cent., were recurrent in character, of whom 30 were second admissions, and 2 were third admissions.

The ages of the 257 admitted are classified as follows: 13 were under 20 years, 44 between 20 and 30 years, 62 between 30 and 40 years, 61 between 40 and 50 years, 45 between 50 and 60 years, 27 between 60 and 70 years, and 5 were over 70 years of age.

The duration, according to the history obtained, was three months or less in 94 cases, six months in 28 cases, nine months in 18 cases, one year in 27 cases, two years in 31 cases, three years in 12 cases, and five years and over in 46 cases.

As to nativity, 19 were foreign, and 236 were native born.

Discharged Cases. The number discharged during the first year was 81—36 men and 45 women. Of these 35 were recover-

ed, 41 improved and 5 unimproved. Of the 35 recovered, 20 were men and 15 were owmen. The number recovered represents 24.1 per cent. of the number of admissions for the year, 25.3 per cent. of the whole number of presumably curable cases under treatment, and 57.3 per cent. of the presumably curable cases admitted during the year.

APPROACHING THE ADMINISTRATION BUILDING.

There were discharged during the second year of the period 19 men and 45 women; total 65. Of these 35 were recovered, 29 improved and 1 unimproved. Of the recovered, 7 were men and 28 were women. The number recovered represents 31.2 per cent. of the number of admissions for the year; 25.3 per cent. of the whole number of presumably curable cases under treatment, 54.6 per cent. of the presumably curable cases admitted during the year.

The psychoses of those recovered during the period were melancholia in 23 cases, acute mania in 34 cases, acute confusional in-

sanity in 2 cases, toxic insanity in 7 cases, and chronic mania in 4 cases. The approximate ages of the recovered were as follows: Ten were under 20 years, 19 between 20 and 30 years, 19 between 30 and 40 years, 11 between 40 and 50 years, 14 between 50 and 60 years, 7 were over 60 years.

There were discharged improved during the period of 25 men, 45 women; total 70; unimproved, 3 men and 3 women; total 6.

One alien admitted during the period was, after a sojourn of twenty-four days in the Hospital, deported by the Bureau of Immigration at the expense of the steamship company which brought the patient to the United States. This action was based upon the information gathered and submitted to the Bureau that the subject had previously been insane and an inmate of a foreign institution, was insane on landing and had become dependent on the State within one year after arrival in this country. At the instance of the Federal Government, the responsible steamship company reimbursed the Hospital for the cost of the patient's brief stay in it.

Mortality Record. The number of deaths for the first year was 47—25 men and 22 women, or 5.4 per cent. of the whole number under treatment. During the second year there were 35 deaths—22 men and 13 women, or 4.2 per cent. of the whole number under treatment. Of the 82 deaths during the period 28, or 34 per cent., were cases of general paresis, and 13, or 15 per cent., were due to tuberculosis.

Two patients suicided during the period, one by strangulation with a piece of wearing apparel and the other after escaping from her attendants in the darkness while returning from the evening meal, and managing to elude her pursuers, threw herself in front of a moving railway train. Both were known to have suicidal tendencies and were subjects of very careful supervision, but in spite of it, they finally succeeded.

The death rate during the past year was the lowest in the history of the Hospital.

The appended medical tables set forth in detail the record of the movement of patients.

Infectious Diseases. The period has been exceptionally free from epidemics of infectious diseases of every kind. Tuberculosis is always present, not by the spread of the infection within the Institution, but infected cases in varying stages of development

are constantly coming in. At the end of the period there were eleven demonstrated cases present against seven at the beginning of the period, and the number of deaths due to this cause were 13, or one more than during the previous period. This is a slight increase due solely to the number of infected cases admitted. Two cases on admission were in advanced stages of the disease and died within a short time thereafter. The new cases are the source of the greatest menace to the general population, as usually they are actively maniacal and their isolation is much more difficult. In the management of this disease the observance of sanitary rules is strictly enforced and the history of the past four years proves that it has been kept under control.

There have been no cases of typhoid fever excepting only one in a member of the medical staff, who contracted the disease while absent on a short vacation and which developed two weeks after his return. No cases of smallpox have occurred, although one patient was admitted directly from the house and the very room occupied by a relative seriously ill of it. This fact was not discovered until twenty-four hours after the patient's admission, when she was temporarily removed from the premises, and every precaution taken to protect all who had come in contact with her. The rule of vaccination as a requirement of admission is still rigidly enforced in all cases.

General. The medical work of the period has had a serious handicap in the disordered classification, which has grown steadily less defined as the overcrowding has increased. At the beginning of the period the groups of cases were so nicely balanced as to be almost ideal and with a few vacancies in each for a working margin, a transfer could be effected as promptly as the condition of any case indicated its advisability. Moreover, it was then possible to receive the acute cases without delay and place them under immediate treatment. During the period, however, the conditions, especially in the Department for Men, have been much altered. Every cottage has become crowded, and some much beyond their rated capacity. The question of the assigning of the new patient to his proper group where the chances of improvement and recovery are the best, has yielded to the more pressing one of possible accommodations of any kind. This in the very nature of things is a hindrance to the best medical work and necessarily

influences its results. It is hoped, however, this situation is only temporary and that some relief may be found in the suggestions elsewhere submitted.

The results of the medical work during the period are nevertheless gratifying. The death rate was exceptionally low, and particularly so during the past year, and the proportion of recovered and improved cases was high. The medical supervision has steadily improved year after year, and the usual standard of nursing has been maintained.

The sanitary conditions of the buildings and the grounds are good. The new tile floors and extensive repairs and alterations in the plumbing are the most important improvements lately made in the sanitary conveniences. The sewage purification plant has completed its third year of service and continues entirely satisfactory in every way. The cost of its maintenance is almost nothing, as it operates automatically. The contact beds occasionally are plowed and raked to remove the rank vegetation, which thrives luxuriantly upon them, but otherwise the plant calls for very little attention. The effluent continues clear, odorless and practically free from organic substances, the oxidation being so complete that it has never been necessary to remove any sludge from either the septic tank or the beds. The water supply continues abundant and of good quality. The late improvements in this system have removed a danger of possible pollution of the water in storage, which was ever a source of anxiety to the management. The overcrowding of some of the cottages it is feared will lower the standard of sanitation, but it seems unavoidable in view of the large number of acute cases being constantly urged for admission. In some of the dormitories the established allowance of fifty square feet of floor space for each patient has already been reduced to thirty, and if this encroachment continues, serious impairment of health conditions will be the penalty. Some compensation for this evil of overcrowding has resulted from the effort made to increase the outdoor life as much as possible and to find employment for as many patients as can be interested, the state of health permitting, in work of any kind. Likewise, the number of patients receiving meals in their respective wards has been reduced, and now seventy-two per cent. of the total number of patients are going out regularly to the dining-halls for meals, a proportion

which, although now unusually high, might be slightly increased if the accommodations of the dining-halls would permit. The value of this practice is more considerable than is at first apparent. It insures to all able-bodied patients, however sluggish, indifferent, and even antagonistic they may be to exercise *per se*, and the class is not a small one, a modicum of fresh air three times daily regardless of the conditions of weather. The exposure is nothing, but the breath of fresh air, the little exercise, the new scenes and strange faces are much, and aid both appetite and digestion, to say nothing of the refreshing advantages accruing from methodically and completely vacating and opening the cottages to the air, even though for a short period of time only. The contrast between the system of congregate dining-halls and that of our former cottage dining-rooms and kitchens is so vast and the advantages and conveniences of the former are so numerous and superior, that it seems, in view of an experience of eighteen years, incomprehensible that the individual dining-rooms and kitchens should find favor in any institution for the insane.

Faith in the value of occupation of the more vigorous patients grows with the years, and the effort to engage as many as can be induced to take employment has not been abated. The regret is that we have not a greater variety of industries to tempt and interest them, although much has been accomplished. It is apparent that this feature of the work can not reach its highest and best development without the broader opportunities of a colony. A more definite segregation of the working group must be secured than is possible in the parent institution before the best results are obtainable. Within the institution proper, which provides for all classes of cases, the main body of patients are so incapacitated by reason of either infirmity, mental or physical, or life-long anenergy, that the example of well directed activity and industry is wanting, and the patient naturally inclined to industrious habits, easily falls into the life of ease and indolence of the majority unless prudently directed and influenced by those charged with his care. This is in a sense a therapeutic problem which is always before us and not easy of solution. The amusements and entertainments have received the usual attention during the period, and much credit is due the numerous members of the organization for the large number of pleasing and clever exercises they have

with much labor worked out. These have consisted of theatricals, weekly dances, socials and celebrations of the important holidays by fitting and more or less elaborate programs.

CAPACITY.

The Hospital has a rated capacity of 712 beds, of which 341 are for men and 371 for women, with reservations of fifteen beds in each of the two hospital cottages for the sick. The daily average number present during the past year was 731, showing 19 patients present in excess of the accommodations and an encroachment of that number upon the reservation in the hospital cottages.

The pressure for admission has never been so great in the history of the Hospital as during the past two years. This was particularly true in the Department for Men, which was overcrowded even at the beginning of the period and the conditions have steadily grown worse to this time. The demand for room exceeded by far the vacancies created by deaths and discharges, and yielding from time to time to the pressure for the admission of very urgent cases, the reserved beds for the very sick have even been filled, and the classification throughout the department so seriously disordered as to affect to some extent the results of treatment. In the Department for Women nearly all acute cases were admitted without long delay, but during the past year incurable cases could not be received. In the selection of cases for admission from the long waiting list, preference, according to the statute, has been given to the presumably curable. During the first year of the period the applications for admission aggregated 240, of which 121 were for men and 119 for women. Of these 145 were admitted, 16 were accepted for admission and afterwards withdrawn, 5 were rejected as inadmissible and 74 were denied admission for want of room. During the second year the total number of applications was 228—124 for men and 104 for women. Of these 112 were admitted, 13 were accepted and afterwards withdrawn, 1 was rejected as inadmissible, and 102 were denied admission for want of room. The total number of suspended applications during the period was therefore 176. If these are considered in connection with the list of 100 suspended cases at the end of the previous biennial period and make a fair esti-

mate of deaths, removals from the State, and changes in conditions which make commitment now unnecessary, it is a safe conclusion that there are 200 insane in the Eastern District deserving of and awaiting admission to this Hospital. It is true that the majority of these suspended applications is composed of cases of senile insanity and organic degeneration and are therefore incurable, yet a few acute and presumably curable cases, particularly men, have been denied admission.

In view of these facts we have for consideration the same problem, complicated by larger numbers, of additional accommodations, which comes up for attention, if not for successful solution, with unfailing regularity at the end of each biennial period. Much, however, is being done by the State to care for the insane in the hospitals and it, also, is now pushing as rapidly as possible the construction of the new hospital at Madison, which will accommodate 1,000 patients from certain counties in the southern part of the State. Likewise, it has undertaken the establishment of a village for epileptics at New Castle. This extensive work was authorized by the last Legislature, and the State, therefore, evidently is alive to the responsibilities resting upon it in the matter of the care of its unfortunate wards and is doing all that can be done at once to humanely care for them. The village for epileptics will indirectly relieve the situation in the Eastern District to a small extent, as it is hoped it may ultimately receive the insane epileptics now in this and other hospitals of the State. The new hospital for the insane may assist directly by the transfer of one or two counties from the Eastern to the Southeastern District. With the sum of this relief, which can not in any event be immediate, many insane in the Eastern District will still be without State care.

I have been so firmly convinced that this Hospital can be best administered with its present size and arrangement of structures and it therefore should never be extended beyond its existing limits of accommodation, that I had hoped the time would never come when the needs of this district would require an extension of its capacity by additional construction on the immediate premises. While not blind to the fact that the number of insane in the district was steadily increasing, at least as rapidly in its proportion and probably a little in excess of it, as the general population and that a

larger number must be, in consequence, taken under the care of the State and even under the administration of this Hospital, the hope was also entertained that the plan of colonization, advocated during the past several years in these reports, might be adopted and so far developed as to enable it to provide for this growing need. In view of the large number of waiting cases, many of them of the most urgent and deserving character, a few confined in the county jails and associated with the criminal and vicious classes, some at large roaming in a neglected condition about their community, and the majority in private homes exhausting the resources of the family in its efforts to provide for them, while at the same time they are destroying by eccentricities of conduct the happiness of the household and exposing the members of the family and particularly the little children to shocking dangers, and above all, the loss of the opportunity for restoration to health and usefulness for lack of proper treatment and care, it seems necessary, regrettable as it is, that this cherished hope of preserving the limits of this Hospital must now be abandoned and recommendation be made for again enlarging it. This can be done by the erection of two infirmary cottages—one in either department, located in the rear of and in proximity to the hospital cottages. Such structures should accommodate no more than forty beds each. Cottages other than these can not be added without unreasonable expenditures for enlarging the central plant, and further extension can not be prudently made except by colonization—a plan advocated time and again in these reports, and which is once more submitted and recommended for consideration, in the belief that it promises the greatest elasticity for the least financial outlay. Further observation of its practicable application in a few hospitals in other States, confirms the view heretofore expressed in its favor.

This plan contemplates the purchase of a tract of land, 300 to 400 acres in extent, suitable especially for gardens, orchards and dairy purposes, and should be within three miles of the parent institution. Here should be erected plain, inexpensive and substantial cottages and farm buildings to which may be transferred the quiet, chronic and convalescent cases—men at first, and later on the women may be similarly domiciled—where they find simple and healthful employment and a degree of freedom not possible

in the parent institution, and yet under the management and medical supervision of the existing medical staff. The patient thus situated will contribute something, although it may be small, to his maintenance, and encourage others by his example of industry, to avoid or break up the habit of indolence so prevalent in the large grouping. With such a colony for an outlet for the better chronic cases, the parent institution would be enabled to preserve with more certainty vacancies for the recent cases so urgently in need of prompt admission and special treatment. This surplusage of capacity which I have occasionally heretofore referred to as our working margin, is a necessity if the highest good is to come to the largest numbers. Otherwise under the practice of the existing statute, since the incurable cases, which comprise about fifty per cent. of the admissions, must be kept in the institution, the Hospital soon becomes filled with the chronic cases to the exclusion of the recent and curable class—the very class which is most benefited by treatment. Such is now the condition in this Hospital and hence these recommendations are made and urged.

FINANCES.

The following appropriations were available for the fiscal year ending October 31, 1905:

Maintenance for 625 patients.....	\$104,000 00
Maintenance for 89+ patients at \$165.....	14,776 39
Total maintenance fund.....	\$118,776 39
Repairs	\$5,000 00
Clothing	5,000 00

The total disbursements were \$126,856.63, Exhibits 2, 4 and 6, and are classified as follows:

Subsistence	\$36,765 00
Trustees' and officers' salaries.....	10,117 72
Attendants' wages	20,907 25
Employes' wages	15,113 33
Fuel, light and other expenditures.....	34,359 14
Repairs	4,988 07
Clothing	4,605 62

Unexpended balances in these funds aggregating \$1,919.76 were covered into the general fund of the State treasury.

Cost per capita of maintenance.....	\$164 10
Cost per capita of repairs.....	6 98
Cost per capita of clothing.....	6 45
Total cost per capita.....	\$177 53

There were no expenditures from specific funds during the year.

For the fiscal year ending October 31, 1906, the following appropriations were available:

Maintenance for 700 patients.....	\$116,000 00
Maintenance for 31+ patients at \$160.....	4,983 54
Total maintenance fund.....	\$120,983 54
Repairs	\$6,000 00
Clothing	5,000 00
Specific funds	24,900 00

The total disbursements were \$150,818.93, Exhibits 10, 11, 13 and 15, and are classified as follows:

Subsistence	\$38,145 51
Trustees' and officers' salaries.....	10,926 66
Attendants' wages	20,981 69
Employes' wages	15,917 79
Fuel, light and other expenditures.....	32,970 98
Repairs	5,969 22
Clothing	4,149 89
Specific purposes	21,757 19

There were covered into the general fund of the State Treasury unexpended balances from the above named funds aggregating \$6,064.61, of which \$2,921.80 were from the regular funds and \$3,142.81 from the specific funds.

Cost per capita of maintenance.....	\$162 54
Cost per capita of repairs.....	8 16
Cost per capita of clothing.....	5 66
Total cost per capita.....	\$176 36

Receipts from all sources other than appropriations amounted to \$242.92 for the first year, and \$267.92 during the last year of the period (Exhibits 8 and 23). The sums were paid into the general fund of the State treasury and reported semiannually to the Governor.

The inventories of October 31, 1905, and October 31, 1906, are set forth in summaries in Exhibits 9 and 24.

The regular appropriations have been sufficient to maintain the established standard of service in the Hospital during the period and both years closed without indebtedness of any kind. The maintenance appropriation showed small balances at the close of each year, notwithstanding the generally higher cost of subsistence supplies. The most serious problem presented in the application of this fund was the preservation of the wage scale, which has little or no elasticity because the maintenance fund is fixed. The prevailing higher prices for labor, together with the increasing demand for help in almost all lines of business, in this section of the State at least, has by our inability to meet the new conditions, occasionally disturbed the organization for short periods. The maximum wages within the limits of the existing funds are now being paid, and any further readjustment will require additional funds both for maintenance and repairs.

The equipment has been kept up, but no important additions to it have been made for the reasons heretofore assigned.

The appropriation for maintenance for the ensuing year is, as last, \$116,000 for 700 patients and \$160 per capita for any excess. For the ensuing biennial period it should be \$121,000 annually for 725 patients, which is a slight increase over the present allowance.

The disbursements for repairs for the first year were \$4,988.07 and \$5,969.22 for the second year. The funds available were \$5,000 for one year and \$6,000 for the other, and were applied where it seemed repairs were most needed. Notwithstanding the additional allowance in this fund, some of the repairs of the last year are incomplete and a few were omitted entirely. I would recommend that the repair fund be increased to \$7,500 for each year of the ensuing biennial period. Nowhere has the increase in the price of labor been so seriously felt as in the application of this fund, as the character of the work demands, usually, skilled and expensive labor. It is moreover, of the highest importance that needed repairs receive prompt and thorough attention that rapid deterioration may be prevented. Here where there are so many and such various structures and the equipment embodied in so many kinds of apparatus and systems, deterioration at best is rapid enough, but neglected only temporarily, the downward prog-

ress doubles its rate very soon, and the cost of correction and renewal keeps pace with it. Hence it is essential that this fund be ample and more than sufficient to cover the actual necessities as they arise year after year.

The expenditures for clothing were \$4,605.62 for the first year and \$4,149.89 for the last year. The fund of \$5,000 for clothing is sufficient for the present population and should be continued for the ensuing biennial period. It provides a reasonable supply of comfortable clothing of good quality for all patients dependent upon it.

Insurance and Fire Protection. The amount of insurance carried is \$24,300 as heretofore, of which \$13,500 is on the laundry building and contents and \$10,800 on the farm buildings and their contents, including the live stock. A better rate has lately been obtained upon that carried upon the farm property, which is the first consideration ever given our system of fire protection by the insurance companies. No insurance is carried upon the buildings and other property of the institution, because exposure to loss from fire is small by reason of isolated buildings, a good system of fire protection and the fact that all buildings with two or three exceptions have personal service in them throughout the day and night. And, moreover, since the State has no definite policy upon the subject of insurance, the management believes that it is prudent for the State to carry its own insurance. The system of fire protection is in good condition, and while no special additions, except the water tower, have been made to it during the period, it has been carefully maintained at its usual standard. Its efficiency was demonstrated by two severe tests within the past two years by fires which threatened serious loss—one in the Women's Hospital and the other among the farm buildings, which are closely grouped. The prompt action of the fire department soon controlled both fires with small losses. The higher constant water pressure afforded by the new water tower is the most important and valued addition ever made to the system, and supplementary to it, the supply pipe lines have been so laid and connected as to make conveniently possible in an emergency the additional pressure from the pumps in the pumping station and the large house service pump in the power house.

Specific Funds. The Legislature of 1905 made the following appropriations for specific purposes:

1. Tile floors	\$2,000
2. Water supply	10,000
3. Farm buildings	7,200
4. Laundry equipment	1,400
5. Additions, Cottages G and H, and C and D.....	1,800
6. Railway crossing	2,500
Total	\$24,900

These appropriations were available only during the fiscal year ending October 31, 1906. The total expenditures were \$21,757.19, and balances amounting to \$3,142.81 were unexpended for reasons hereinafter set forth, and were returned at the end of the year to the general fund of the State treasury. The effect of confining the availability of these funds to the last year of the period made it necessary to anticipate them in two instances by making contracts on deferred payments during the previous year in order to make completion certain within the life of the appropriation; and in one other instance it was found impossible for want of time to complete the work outlined and an unused balance was returned to the general fund. For reasons hereafter given, the railway crossing was not made and only a small portion of the fund was drawn. No funds were provided for increasing accommodations, and hence no general construction was done.

Tile Floors. This fund was applied as intended in renewing with tile the floors in the bath-rooms and toilet rooms, where needed, in all cottages and buildings, and was a continuation of work begun during the previous biennial period. Wood floors were everywhere used in the original, as well as some intermediate construction, and time and constant usage had rendered them unsanitary. These were removed and impervious floors of white vitreous tile with a white cove base were substituted.

The sanitary fixtures were either thoroughly repaired or replaced with new and solid porcelain or white vitreous wares, and the walls of all the rooms were painted with white enamel paint and some were furnished with a wainscot of Keene's cement. Fifteen toilet rooms, lavatories and bath-rooms in the cottages were so treated, much to the improvement of the general sanitation. This work is slow and costly because it must be done while the

cottages are in service and always with a due regard for the safety and comfort of the patients, and for the additional reason that so many kinds of skilled labor are required to do it. It is still incomplete, but recommendations are elsewhere made for means to finish it during the coming year. Exhibit 17 sets forth in detail the expenditures from this fund, which are classified as follows:

Vitreous tile and cement.....	\$516 32
Laying tile floors.....	547 09
Sanitary supplies	634 88
Plumbing	301 71
Total	\$2,000 00

Water Supply. A specific appropriation of \$10,000 contemplated the construction of a water tower with necessary supply lines for purposes of storage and better fire protection. Hitherto the only storage, that provided by the original construction, consisted of three cisterns located about the power house, one of which was in dangerous proximity to the main sewer, and hence constantly menaced by possible pollution from a broken sewer. These cisterns, moreover, were first made for wells, but obtaining no considerable inflow of water, they were, without even cementing their brick walls, converted into cisterns after a new source of water supply had been obtained. The pumping station in the swale 1,500 feet to the east, delivered the water to these cisterns, whence it was carried into the domestic and fire protection systems by means of a steam pump located in the power house and always in service. The motive of the proposed improvement was, therefore, the elimination of these cisterns and the provision of safe and ample storage and a better pressure for fire protection, without the constant service of a steam pump.

This appropriation was available November 1, 1905, thereby limiting the completion of the work to one year. In view of its magnitude and the necessity of doing the concrete construction, at least, in mild weather, it was concluded, after a consultation with the Governor, to anticipate the appropriation by contracting for the work to be done mainly during the summer of 1905 on payment without interest deferred to November 15, 1905.

On detail drawings and specifications prepared by R. L. Sackett, civil engineer, proposals were received and awards made May 9, 1905, for the work in three classes, concrete foundation, steel

standpipe, and brick and concrete casing. The work was begun at once, but progressed slowly owing to delayed materials and other unavoidable causes, and was not completed until late in the spring of 1906. The structure consists of a steel standpipe 110

WATER TOWER.

feet high and 16 feet in diameter, made up of steel rings varying in thickness from one-quarter to nine-sixteenths inches, securely handriveted together, and resting on a solid concrete foundation well-buttressed, thirteen feet thick, seven feet of which is below the grade. To preserve a uniform temperature of the water and particularly to prevent the formation of ice in the standpipe, the latter was encased with a wall of reinforced concrete faced with

pressed brick and lined with common brick. This casing rests on the concrete foundation and is placed two feet away from and entirely independent of the standpipe, and through the interspace thus provided a spiral iron stairway runs to the top. The cover of the standpipe is made of reinforced concrete, and serves at the same time the purpose of a floor for the battlemented top of the casing. The storage capacity is 264,000 gallons, about two days' supply, and the full pressure fifty-five pounds to the square inch. The connections are so made that the pressure, in the event of serious fire, may be increased by the aid of the service pump located in the power house. Two of the old cisterns about the power house will be reserved for the storage of the overflow from the cold store, and the third one has been abandoned and will be filled up.

The cost of this improvement was \$10,000 (Exhibit 18), classified as follows:

Steel work	\$4,045 00
Concrete foundation	1,348 70
Pipe work	457 96
Brick casing	3,381 70
Engineer's expense	524 66
Cement walk	209 98
Total	\$10,000 00

Farm Buildings. An appropriation of \$7,200 was intended for the construction of an additional root cellar, a barn, and certain alterations in the dairy barn. The root cellar and barn were satisfactorily constructed as planned, but the improvement in the dairy barn could not be effected for want of sufficient time and because the rise in the price of building materials made it impossible to complete within the original estimates all the work planned.

The *root cellar*, located near and parallel to the old one, is a cement concrete structure with a slate roof, 24 feet wide and 52 feet long, with a basement 8 feet high and one floor with a ceiling 7 feet high. It is well lighted and ventilated and conveniently arranged for handling supplies. This house will furnish storage for the winter's stock of potatoes and such other vegetables and fruits as require such protection.

The cost was as follows:

Lumber and mill work.....	\$267 16
Slate and galvanized iron work.....	218 00
Cement work	518 00
Total	\$1,003 16

The *barn*, as was the root cellar, was built under the supervision of the head carpenter and contracts were made only for the cement work, the brick work and the slate and galvanized iron work. This is a substantial and well-appearing structure with cement foundation and wall to the window sills, brick walls with openings trimmed with cement, and a gambrel roof of slate and galvanized iron. It is located west of the farm house with a frontage of 52 feet to the south, and an extreme length of 102 feet. The carriage room is large, and with the harness room, office and other conveniences; takes up all the space in the front section of the structure, and the rear section is arranged into stalls for seventeen horses. The floor is made of cement and drained into cess-pools. The second floor affords ample space for forage and grain and two bed-rooms for employes. It is supplied with hot and cold water, and will be wired for electric illumination. The need for this addition has existed for many years, and it will now be possible for the first time to properly house the horses and vehicles. Some of the old structures, which have done service for so many years, are much dilapidated and will be razed during the coming year. The cost of this construction was as follows:

Construction iron	\$322 95
Drawings	150 00
Lumber and mill work.....	1,638 05
Brick work	1,560 00
Cement work	896 00
Slate and galvanized iron work.....	850 15
Hardware and iron work.....	264 48
Total	\$5,681 63

Dairy Barn. The improvements in the dairy barn contemplated by the specific appropriation could not be made because the cost of the other improvements exceeded somewhat the original estimates and the balance in the fund was insufficient to properly carry them out. Moreover, the one year during which this fund was

available did not afford enough time to complete all the work. Although repairs about the dairy barn are much needed, they were necessarily deferred to the ensuing period and the balance of the fund, amounting to \$512.21, was permitted to revert to the general fund of the State treasury. A specific appropriation will be recommended to permit the completion of this work in a fitting manner.

Laundry Equipment. An appropriation of \$1,400 authorized some improvements in the equipment of the laundry. Two solid head iron washers with brass cylinders of the most improved type replaced the last of the wooden washers furnished in the original equipment sixteen years ago. These are uniform in size with others installed lately and fully equips the wash room. A special heater was purchased and is now on the ground ready for installation as soon as our force can undertake the work. The purpose of this heater is to relieve the large heater in the power house of some of its burden and thus permit the water in the domestic hot water system to be carried at a lower and safer temperature. This appropriation also contemplated the purchase of a new laundry engine, but certain alterations and experimental repairs in the valve of the old engine proved so successful that it appeared the latter would do service for yet another year or two at least, and the balance of this appropriation, amounting to \$268.04, has been covered into the general fund. The expenditures from this fund are shown in Exhibit 20, and are classified as follows:

Laundry washers	\$600 00
Engine repairs	59 33
Hot water heater.....	430 40
Fittings and supplies.....	42 23
Total	\$1,131 96

Additions, Cottages G and H and C and D. The aim of the specific appropriation of \$1,800 for additions to these two cottages was the betterment of the sanitation in Cottage G and H and some improvement in the conveniences of Cottage C and D, rather than increased capacity. In both instances the ends have been very satisfactorily attained. In Cottage G and H the dining-room was enlarged, the light improved and a better entry secured by the removal of certain partition walls and a reduction in the size

of the former large scullery. Encaustic tile floors with white glazed base were laid in the dining-room, scullery and pantry closets and all the walls repainted. A commodious clothing room 17 feet 6 inches by 17 feet 6 inches was built as an addition to the north end of the cottage and the old clothing room was transformed into a bath-room and the old bath-room into an ample sized lavatory. Likewise was the toilet room of the first floor enlarged. Excepting only the clothing room, all these rooms, including the toilet room on the second floor, received new floors of white vitreous tiles with white glazed base. New sanitary fixtures replaced the old except in the lavatories, where repairs were sufficient for the present, and a new cast iron sewer was put in. These alterations, while not extensive, have much improved the sanitation of this cottage as well as its conveniences.

The change in Cottage C and D consisted in the erection of a clothing room 16x16 feet adjoining the scullery, and through the latter was built a partition which made two rooms—an additional clothing room 10x16 feet and a bath-room 15x16 feet. A pantry was transformed into a corridor for a rear entrance, and another pantry provided a coat-room. A rear terrace 10x38 feet was made of cement. The two small bath-rooms and clothing rooms on the second floor will be used for bedrooms, and the large dormitory on the first floor will afford an additional day-room for a billiard table. By this arrangement all patients, excepting only four, will sleep on the second floor and thereby be under better supervision during the night. The floor of the small corridor was made of encaustic tiles and that of the bath-room of white vitreous tiles as elsewhere in the Institution. The new bath-room was equipped with new fixtures, including a shower bath with a slate stall. The additional day-room afforded by these improvements will be a boon to the forty-nine convalescent and working patients domiciled in this cottage, nearly all of whom are capable of appreciating the advantages of the new arrangement. The cost of these alterations was the full amount of the appropriation, as appears in Exhibit 21, and is classified as follows:

Brick work	\$265 00
Sanitary supplies	179 06
Cement and tile work.....	649 38

Lumber and mill work.....	\$205 00
Tin and slate work.....	253 00
Labor	248 56
Total	\$1,800 00

Railway Crossing. An appropriation of \$2,500 was made to provide for the construction of a crossing over or through the right-of-way of the P., C., C. & St. L. Railway Company for a front entrance to the Hospital grounds. The Legislature of 1903 made a specific appropriation in the same amount for the same purpose, specifying a bridge, but failing after repeated efforts to reach any kind of an agreement for a bridge with the officials of the railway company, the fund was permitted to revert to the general fund of the State treasury on October 31, 1904. A recommendation was then made to the Legislature of 1905, resulting in the appropriation under consideration for a railway crossing, leaving to the judgment of the management the kind. Efforts to reach an agreement with the railway officials for a grade crossing likewise failed, although urgently made from time to time during another year. Finally, in order that some positive action might be taken before the end of the fiscal year, which limited the availability of this fund and reverted it to the general fund of the State treasury, a contract was entered into for the construction of a grade crossing, according to plans previously prepared and adopted, and the work begun on June 27, 1906, was stopped the following day by a temporary restraining order issued by the Wayne Circuit Court against the management and the contractor on the application of the Pennsylvania Railway Company. Here the matter rests, as under the statute, as it now reads, the restraining order can be made permanent unless gates are erected and maintained, which would defeat the very aim of the crossing.

This fund, less the cost of the work only begun and a temporary walk to the street car station, has therefore been covered into the general fund of the State treasury, with the recommendation that a law be enacted which will permit the construction of this and similar grade crossings when desired and needed for entrance to the grounds of any State charitable or correctional institution, or any other property of the State, and that another specific fund of

\$2,500 be appropriated for making this crossing. The expenditures from this fund were as follows:

Grading	\$55 00
Drawings	25 00
Lumber	60 44

Total	\$140 44
-------------	----------

Recapitulation of Specific Funds—

Total specific appropriations.....	\$24,900 00
------------------------------------	-------------

Disbursements—

Tile floors and plumbing.....	\$2,000 00
Water supply	10,000 00
Farm buildings.....	6,684 79
Laundry equipment	1,131 96
Additions, Cottages G and H and C and D...	1,800 00
Railway crossing	140 44

Total disbursements	21,757 19
---------------------------	-----------

Balance returned to State Treasury.....	\$3,142 81
---	------------

Repairs and Minor Improvements. The property of the Hospital has been kept in a good state of repair during the period, and while repairs, where so much construction must be maintained, are never all completed, the most urgent requirements have been met within the funds regularly appropriated for this purpose. The effect of higher prices both for labor and materials of all kinds has been keenly felt in the effort to make the appropriations for repairs cover the essential needs. While much work could yet be done with profit to the Institution, a small force of skilled mechanics has been constantly employed throughout the period at almost every variety of repair work, in an earnest endeavor to prolong the life of usefulness of the permanent improvements and to add here and there a minor improvement. The appropriation for repairs for the first year was \$5,000, and for the second year \$6,000. In view of the increase in the cost of this work, as well as in the number of structures under supervision, it is recommended that this appropriation be increased to \$7,500 annually.

The expenditures from this fund are set forth in Exhibits 4 and 13.

Always two, and during the summer months three or four, painters were engaged at the work of painting and keeping in order the woodwork, inside and out, the tin and iron work of the

roofs, the walls and ceilings, furniture and what not, which could be protected or improved in appearance by paint or varnish. The changes incident to the improvements in the plumbing and new tile floors has very largely increased the burden of this class of work, but it has gone steadily along and kept pace with these major repairs with reasonable satisfaction. The adoption of aluminum bronze for the coating of all exposed pipes in toilet rooms, bath rooms and elsewhere, including direct radiators and steam pipes, has proved both economical and wise from the standpoint of sightliness. In a successful effort to extinguish a fire in the Women's Hospital during the past year, the cottage was flooded with water, making it necessary to repaint it throughout. Later the Men's Hospital was likewise painted. The cost of this work for labor and materials was \$1,491.82 for the first year and \$1,861.75 for the second year. The roofs were, as usual, carefully inspected and repaired during both seasons at a cost of \$440.37. The large smokestack of the power plant was repaired by pointing up the brick work, requiring a scaffold 112 feet high (\$250.00). The iron and brick smokestack at the pumping station, being both too small and defective, was taken down and a new one of iron put up at a cost of \$265.36. The garbage house was put in good condition with a new cement floor and foundation, and a small addition for the protection of the horse and delivery wagon at a cost of \$151.09. The repairs on the steam heating plant were many and required the attention of two men during both heating seasons. In the east and west wings, Cottages G and H, 8 and 9, C and D, F, and the rear center, the steam lines and returns were in part enlarged, resulting in better service. The indirect radiators in the basement were all hung to the floor overhead, causing by their great weight the floors in some instances to sag, and to remedy this defect, many radiators, when taken down for any purpose, were replaced upon iron frames resting upon the cement floor. Repair work upon the heating plant increases year after year, as it is now sixteen years since it was installed, and many of the lines are giving way. Elsewhere a recommendation is made for a specific appropriation for extensive repairs and an exchange of the gravity system now in service for a vacuum system. The plumbing, both in connection with the new tile floors, elsewhere mentioned, and independently, has been extensively re-

paired. In many instances new sanitary fixtures in solid porcelain or vitreous ware, excepting only the bath tubs, which are enameled iron, were installed. This work began four years ago and has been carried along as best we could, both by the repair fund and the specific appropriation, and while not yet complete, satisfactory progress has been made, much to the improvement of sanitary conditions. It will be continued until all toilet and bath rooms and sculleries are refitted.

Two small fire losses were sustained during the period, necessitating some repairs to damaged structures. A small brick outbuilding on the farm was destroyed and two adjacent wooden structures were slightly damaged by a fire which originated from a gas stove. This loss amounted to about \$200. The second fire occurred in the attic of the Women's Hospital and was due to a spark from a tinner's firebox while the gutters were undergoing repairs. The structure was saved only by the early discovery of the fire and the very prompt action of officers and employees. The cottage was damaged to the extent of \$150 only. Numerous repairs of a minor character were made in the sewers. One trunk line for 300 feet of its length was occluded and rendered entirely useless by the roots of poplar trees, and new lines of cast iron pipe were laid to carry the sewage from Cottages G and H and I and J. Two and for part of the time three carpenters were regularly engaged in the repairs of a minor character throughout the Hospital. The doors, windows, locks, wooden floors and the like are so numerous and so much used as to require daily attention, and this item of cost is no inconsiderable one.

The ventilation in the Triplet, Cottages G and H, 8 and 9, and 7, was improved by the addition of a number of basement windows.

The household equipment has been well maintained and some additions in the way of a few articles of better furniture, rugs and musical instruments have been made.

FARM AND GARDEN.

The returns from the farm and garden were satisfactory during both years of the period. The products of the first year were valued at \$12,596.92, with an expenditure of \$6,624.56, and for the second year at \$12,360.30, with an outlay of \$4,949.05.

The orchards of both large and small fruits have been more productive than heretofore, due to approaching maturity and better methods of cultivation. The small fruits during the past year were supplied in larger quantities and of better quality than ever before, and their value to the Institution was never more clearly demonstrated. It is a matter of regret that an insufficient acreage of the estate limits the size of these plantations as well as the gardens in the lowlands to their small proportions, as a slight increase in the organization would permit large extensions and give much more profitable returns.

The dairy has been much improved during the period by the addition to it of some Holstein-Friesian cattle, mostly of pure blood. The individual tests have proved beyond question the superiority of the thoroughbred cows of this strain over graded stock of any kind heretofore used, and that the higher cost is justified by the increase in the product. It is the purpose to replace the graded cattle with pure-blooded stock as rapidly as conditions will permit. The herd now consists of 31 cows, 8 heifers and 1 bull. The yield of milk for the first year was 18,121 gallons, and for the second year 23,752 gallons. The piggery continues a source of profit and numbers at this time 214 hogs and pigs in good condition. The yield of dressed pork for the first year was 16,640 pounds, and for the second year 18,657 pounds. The henery has been better managed than hitherto and consequently has given better returns. The equipment is meager, although some improvements are now under way and others are contemplated. With the exception of the potatoes and a few other minor vegetables in small quantities, the gardens have supplied all the vegetables, mostly in abundance at that, used during the period. The farm, however, has not furnished provender sufficient for all the live stock. The dairy herd requires for its maintenance nearly all the provender produced, and the hay and most of the corn must be purchased for the horses. The experiment with six acres of alfalfa, begun two years ago, has been quite satisfactory, and six acres additional were last year sown after inoculation with nitrogen-fixing bacteria. The yield during the past year was about forty-seven tons in three cuttings.

The permanent improvements added during the period were a new barn for the horses and vehicles and an additional root cellar,

both of which are elsewhere described. The former is not quite ready for service, and therefore some of the very old structures, which it is the intention to abandon and raze, have not yet been vacated. The much-needed improvements in the dairy barn could not be undertaken for want of time and sufficient funds, but it is hoped to make them during the ensuing season. The drainage of two or three fields has been improved by a few additional lines of tile, and the roads have all been kept in good condition. Insurance amounting to \$10,800 is carried on the farm buildings and contents. This was rewritten during the past year and for the first time was it possible to obtain in the premiums any consideration of our system of fire protection.

IMPROVEMENTS NEEDED.

Two Cottages. For the purpose of providing a small increase in the accommodations for patients, two cottages should be constructed—one for men and one for women. These should occupy sites already prepared in proximity to the hospital cottages and should conform somewhat to the design and floor plans of the latter. Each should have one vertical ward, arranged into dormitories, and a small number of single rooms with suitable conveniences for a class of infirm cases unable to go out for meals. A dining-room with a small diet kitchen should be built between each of the proposed cottages and the adjacent hospital cottages with connecting covered corridors for the better service of the sick and infirm cases of both cottages. The hospital cottages have no dining-rooms at present, and with the classification so disordered latterly by overcrowding, a dining-room is necessary to supplement the bedside service. To carry out this improvement a specific appropriation of sixty thousand dollars will be necessary.

Tile Floors and Plumbing. The improvements in the plumbing and the laying of tile floors in toilet rooms, bathrooms and sculleries should be continued until all such rooms are as sanitary as it is possible to make them, and a specific appropriation of two thousand dollars for the purpose is recommended.

Railway Crossing. For the purpose of constructing the grade crossing which, although authorized, we have failed to secure on account of our inability to reach an agreement with the Pennsyl-

vania Company, and work on which was recently stopped by injunction, a specific appropriation of \$2,500 is again asked. The legislatures of 1903 and 1905 provided such a fund, but for the reason mentioned it could not be applied, and in both instances reverted to the general fund. If the legislation recommended is secured, this improvement, together with a roadway and walk to the crossing, should be made during the ensuing year.

Steam Heating Apparatus. Extensive alterations and improvements must be made within the next three or four years in the heating plant, which has been in service sixteen years with only minor repairs. It is a gravity system, and since so much of the pipe work must be renewed, it may be advisable to make necessary alterations with a view to the adoption of one of the vacuum systems. Such a change should be effected during a period of two or three years for the sake of economy and safety rather than during a single season. Five structures have been added to the system since it was originally installed without any considerable enlargement of the steam mains. Since it is now proposed to attach to it two more cottages, some changes are imperative. An appropriation of \$5,000 is asked for this work.

Farm Buildings. In order to carry out the improvements in the dairy barn and its appurtenances, contemplated by part of a specific appropriation made by the last Legislature, and which could not be made for reasons elsewhere stated, necessitating the return to the general fund part of the appropriation, a specific fund of \$2,000 is recommended.

Workshop. A more commodious workshop should be provided for the engineer's corps. The one now in use is a temporary wooden structure, and has been a mere makeshift for many years, is altogether too small, and should be replaced by a brick structure in the form of an addition to the power-house, 27x50 feet, with proper conveniences and a better equipment. For this improvement a specific appropriation of \$2,000 is requested.

Attics in Wings. The attics in the east and west wings provide quarters for the night force, and while they have been in use for such purposes for many years, they were never entirely finished. Bathrooms and toilet rooms should be added and a passageway made through the central section of each attic. Likewise should the bathrooms and clothing rooms on the second floor of two wards

in the Triplet Cottage be converted into bedrooms and the dormitories on the first floor be made into bath and clothing rooms, thereby permitting all patients to have sleeping quarters on the second floor only. The estimated cost of these improvements is \$1,800.

Water Supply. The dairy barn and its appurtenances are entirely without fire protection and a water line with a fire hydrant should be laid from the water tower to that point, a distance of 2,400 feet. This will also save the replacing of the old supply line now twelve years old, and in bad condition. One of the pumps of this system must be renewed and one supplied with a much larger cylinder. For this purpose a specific appropriation of \$2,500 is asked.

The specific appropriations should in every instance be made available for a period of two fiscal years to afford ample time to apply them for the purposes intended to the best advantage. The experience of the past year, when all the specific funds were limited to a single working season, and when, too, building materials and skilled labor were difficult to obtain, justifies this recommendation.

ORGANIZATION.

The number of changes on the staff of officers during the period has been less than usual. Dr. C. W. McGaughey, medical interne in the Department for Men, resigned February 12, 1905, to the regret of all his associates, after a very commendable service, to accept the position of house surgeon in the Indiana Soldiers' Home at Lafayette, and this vacancy was filled May 15 of the same year by the appointment of Dr. J. S. Judah, who continues to perform the duties of the position satisfactorily. Mr. R. M. Stormont, apothecary, resigned February 16, 1905, when Harry T. Best, with a record of three years' previous and excellent experience in this position, was reappointed. No other changes, I am pleased to say, have taken place on the official staff, and it is a source of much gratification to be able to report that all, without exception, have discharged their duties efficiently, loyally and earnestly, as the history of their several departments proves. It is also gratifying to be able to state that no changes of a permanent character have occurred among the heads of the other depart-

ments, that each and every one has contributed a full share to the record of the successful work of the period. While among the nurses, attendants and other employes a long list of new names appears, and while occasionally changes have been so frequent as to cause some temporary inconvenience, many of those of long and valued experience have remained and enabled us to maintain the usual standard of service. To these and all others in whatever capacity they may have served, who have been faithful and painstaking in the discharge of the several duties, grateful acknowledgment of appreciation is made.

Confessedly, in a work of this character and magnitude, which has for its aim the alleviation of human distress, salary and wage do not compensate for the stress of effort and anxiety, and the sacrifice of personal comfort to long hours of duty and to the restrictions necessarily placed upon freedom of action permissible in most walks of life; but there is a remuneration of a higher and better kind, soul-satisfying in its character, which comes from the knowledge of service and good done to others, particularly to the helpless. This principle made possible the establishment of this and similar institutions, and without its recognition they can not be maintained. The vast majority comprising our organization I am sure fully appreciate it, and to them is due the credit of whatever good has been accomplished.

Finally, I am deeply grateful for the confidence, support and advice you have accorded me in my efforts to discharge the duties assigned me.

Respectfully submitted,

S. E. SMITH,
Medical Superintendent.

Easthaven, November 13, 1906.

FORTIETH ANNUAL REPORT

OF THE

Board of Control and Superintendent

OF THE

INDIANA BOYS' SCHOOL

PLAINFIELD, INDIANA

TO THE GOVERNOR

For the Fiscal Year Ending October 31, 1906

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING
1906

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
December 14, 1906. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 14, 1906. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

DECEMBER 14, 1906.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

FRED L. GEMMER,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 14, 1906.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer December 14, 1906.

HARRY SLOUGH,
Clerk Printing Bureau.

OFFICERS.

W. C. VAN ARSDEL, President.....Greencastle, Indiana
W. C. BALL.....Terre Haute, Indiana
JOS. B. HOMAN.....Danville, Indiana

Superintendent.

Second Night Watchman.

WM. WISE,
Night Fireman.

LADY EMPLOYES.

MISS BETTIE BELL,
Teacher First Primary Grade.

MISS INA KENWORTHY,
Teacher Second Primary Grade.

MISS CARRIE STONE,
Teacher Fourth Grade.

MRS. BERTHA LOCKHART,
Tailoress.

MISS MARY WHITE,
In Charge Mending Department.

MISS IDA WOODMANSEE,
In Charge Ironing Department.

MRS. INEZ McDOWELL,
In Charge of Boys' Kitchen.

MRS. OLA WILSON,
In Charge of Officers' Kitchen.

MRS. JENNIE HOLLOWELL,
Hospital Matron.

MRS. NORA REYNOLDS,
In Charge Officers' Dining Room.

MISS CALLIE TYRRELL,
In Charge Boys' Dining Room.

MRS. MAUD ESTEP,
Matron, Cottages 8, 9, 10, 11.

MISS ELLA CUSTER,
Matron, Cottages 1, 2, 3, 4, 5, 6, 7.

MISS ORA SCOTTEN,
Cottage Matron, Officers' Rooms.

MISS ANNA ANDERSON,
Housekeeper, Administration Building.

FORTIETH ANNUAL REPORT
OF THE
BOARD OF CONTROL
OF THE
INDIANA BOYS' SCHOOL,
PLAINFIELD, INDIANA.

PLAINFIELD, INDIANA, November 1, 1906.

J. FRANK HANLY, *Governor of Indiana*:

Section 17 of the law of 1883, for the government of what was then known as the Indiana Reform School for Boys, now the Indiana Boys' School, requires the Board of Control, at the close of each fiscal year, to "make to the Governor a full and detailed report of the doings of said Board and of all the expenses of said Institution and such other information relating thereto as may be interesting or useful to the people of the State." Pursuant to such statutory provision the Board of Control herewith submits the fortieth annual report. It covers the fiscal year ending October 31, 1906.

Accompanying this report, and made a part of it, will be found a full and detailed account by Superintendent York of the work of the institution during the year. Valuable and instructive tables compiled from the books of the school, and submitted by him to the Board, constitute a part of this report. From them can be learned many facts of interest about the school. Among these interesting facts are the number of boys admitted during the year; the number released on parole and the number present at the end of the year; the counties from which they came; the trades taught;

the mental and moral instruction given; the product of the farm, garden and shops; a comprehensive financial statement and much other matter. Reports from the Chaplain and Physician to the Superintendent are also included.

During the year the Board has met regularly once each month at the school. At each meeting it has examined the records, books, accounts and reports of the assistant officers, and inspected the school in all its departments. It has examined the vouchers of expense for the month just ended, comparing them with the bids for supplies awarded at the preceding meeting. Requisitions have been considered, and, when approved, the contracts for supplies have been awarded to the lowest bidder on competitive bids obtained by the Superintendent in advance of the meeting and ready for its consideration.

An inventory prepared by the Superintendent for the Board and presented to the Legislative Committee appointed by the Governor for its guidance in preparing its report to the Legislature supplements this report and is on file. It contains the history of the school, a full inventory of the property, a statement of the needs of the school, and other facts of interest and value. Superintendent York also enumerates the various trades taught the boys, the mental and moral training they receive, the discipline by which their conduct is regulated, the equipments of the institution in buildings, machinery and tools, the products of the farm, garden and shops, the aims of the School and its needs for the future, and much other information of value, including the financial exhibit.

Among the specific appropriations by the Legislature at its last session was one of \$500 for the purchase of books and periodicals for the library. In the selection of books the Board consulted Miss Merica Hoagland, Secretary of the State Library Commission, who placed at their disposal all the data in the possession of the Commission, its carefully compiled lists of the best books in all departments of literature—lists of books adapted to varying ages and covering all subjects. With her assistance a very much more systematic selection was made than otherwise would have been possible, so that when the lists were complete for submission to wholesale book dealers for competitive bids it was with the feeling that to the extent the liberal appropriation permitted, books

had been procured that represented the best thought on their respective subjects and that those subjects were so comprehensive as to provide something to interest, entertain and instruct every boy in the institution. Further indebtedness to the Secretary of the Library Commission must be acknowledged for such information furnished Superintendent York on the latest and most improved methods of library management as has enabled him to work out a modified system admirably adapted to the institution. The library will be a part of the school system. One room in the central school building is used for storing the books. Books will be issued to the boys by the teachers, and it is the intention by judicious suggestion to so direct the reading of each boy that it may be of the greatest assistance to him in his education, and especially in his industrial education.

Boys employed in the garden, for example, will be encouraged to read books on gardening and plant life, of which there are many, and all the nature study books, so that brain and hand may work together and intelligent interest light the path of progress. Each department of industrial education has its literature, and books have been procured for all of them. These books are now on the library shelves and the good work expected from them is so manifest as to more than justify the legislative wisdom that made their purchase possible. From time to time books worn out by usage will have to be replaced, for unfortunately books, the material parts of them, are not immortal. And from time to time new books will have to be added, for fortunately thoughts of men are widened year by year, and a library to keep pace with the progress of the race must constantly add new books to its shelves.

The assistance rendered the school in this matter by the Library Commission suggests the reflection that each one of the State's institutions may on some occasion help some other and every other one. As a matter of fact this is constantly taking place, though not as directly as in the instance cited. Usually this help comes through the mediation of the annual Conference of Charities and Corrections, where all topics relating to the institution management are discussed, or from the Board of State Charities, which, in touch with all, is by the sifting process of a comparison of methods and results able to make suggestions backed by observation where not actually based on experience.

The past year has been a busy and prosperous one. Cultivation of the farm and garden, care of the stock and poultry, of the lawns, flower gardens and greenhouses, the up-keep of the laundry, power and gas plant, the making and mending of their own clothes and shoes, the preparation of their own food and care of their own houses, the going through the grade schools, the band playing and the ball playing, the daily routine of living—of normal, healthy living—by boys more in need of guidance and direction than the average or they would not be here, is enough to tax the resources of those charged with the responsibility of management.

Former reports have dwelt at length on the School, its purposes, the work it undertakes to do for the boys committed to its charge, the methods devised and measure of success that has attended these efforts at reclamation. On these topics nothing further may be said. Each year, however, some progress has been made. But it has been developed along well-established lines.

Boy nature this year differs in no way from boy nature last year. Waywardness exhibits itself as manifestly, but more so now than in former years and in as manifold ways. Reclamation of a wayward boy always was and always will be a perplexing problem, and its importance is realized more acutely as the dignity and worth of man is more fully understood and appreciated.

Of recent years Indiana has come to a fuller understanding and realization than ever before of the value of her physical resources, of the fertility of her fields, the richness of her mines and quarries, the volume of her petroleum, the variety of her clays. Her many admirable institutions for the education of youth, and for the care of the infirm in body and mind, and especially the Indiana Boys' School, for the reformation of boys deformed or malformed by heredity or environment, show how highly she values her most precious possession—the material out of which the future citizenship is to be molded.

Boys go astray in the world in many ways and for many causes. Some have no parents and run at large subject to numberless temptations. Others have parents whose precepts and examples harm instead of helping them. In the cases of others the parents have not the time nor the means, perhaps lack of inclination, to give them that constant supervision they require. They cease to go to school. Idleness takes the place of industry. Desire out-

running their means of gratifying them, they take what they are too idle to earn and lack the self-restraint to deny themselves. Very soon such boys, exempt from the wholesome restraint of watchful discipline, become curses to themselves and to their communities.

Upon the arrival of such a boy at the Indiana School the daily routine of his life is changed. He is under strict discipline all the time. He is well fed and well clothed, has a comfortable place to sleep, has his hours of recreation, and his nurse when he is sick. But he *must* go to school. He *must* work a portion of each day at some useful occupation, during the course of which he will learn one or more trades by which he may earn his living after he leaves the school. He is in a school the rules of which are more numerous and exact than the laws of the State. His breaking of these rules is surer of detection and is followed by penalties swifter and more certain than imposed for the breaking of the laws of the State. His privileges in the school and his release from it on his "honor" depends upon his cheerful yielding to wholesome discipline, upon his industry in the school or at whatever work to which he has been assigned, upon his treatment of his associates and obedience to those in authority over him, upon his truthfulness and trustworthiness, his honesty and manly qualities generally. When he has thoroughly reformed and yields to the rules that obedience for lack of which to the laws of the State he was sent to the school, he is prepared to return to his home, if he has one, and it is a proper one, or a proper one can be procured for him.

Each boy while at the School is taught that he is the architect of his own fortune, the arbiter of his own fate, and is made to feel the force and realize the inexorableness and the justice of the law of nature and of God that "as a man sows so shall he reap." Any boy committed to the school, no matter what the offense for which he was sent, can work his way out of it, honestly and honorably, in a year's time. Unless he does work his own way out by his own good conduct it is impossible for him, under the law and rules of the school, to be released until he is twenty-one years of age.

Rigid enforcement of this wise and salutary rule is required for the maintenance of the discipline of the school, since this is a school, not a prison, and discipline is its substitute for a wall. Favoritism can, therefore, have no place in the institution. Boys

must work their own way out of it by exemplary conduct. Equal and exact justice inspires respect and commands confidence. None is so quick to detect departure from such rules, and for a boy to imagine that influence from without and favoritism within can become a substitute for his own good conduct is to impair the benefit of the school discipline on him and lessen its influence for good.

At this School boys are given the rudiments of a sound and serviceable education—enough of an education to assist them in the making of a living and to safeguard such possessions as their industry and thrift may acquire. And they are taught with such thoroughness as their ability and the length of their stay admits, one and perhaps more than one trade, so that later on in the world they can secure employment at some useful and gainful occupation. A list of these trades is given in the Superintendent's report. They are such trades as the condition of life in the institution suggest and make necessary. Indiana's Boys' School is a bustling industrial village in the center of a fertile farm. Villages just like it with outlying garden and farm lands, hundreds of them, are found all over the United States, with this marked exception, viz., that the inmates are all under age, and all boys, and that the few men and women in charge of them are not their parents. In all other ways the management attempts to reproduce normal, healthy, natural village and farm life. School, church, work, play, good food, regular hours are all here.

What other communities need this community needs, and the aim is to have the boys make and care for what they need. This means raising and cooking what they eat, making, mending, washing what they wear, cultivating the farm and garden, caring for the stock of all kinds, doing all the work of all sorts that the institution life requires. As this is their temporary abiding place and not their permanent home, the province of the officers, as elder brothers to them, is day by day, as the daily routine is gone through with, to have them so do their appointed tasks as that when they go out into the great world they may be able to take up the work begun here and do it so skillfully and so well that employers will be glad to secure their services and anxious to retain them.

By way of concrete example it may be said that in so far as the law now permits all the printing required at the school is done at

its own printing office. The school needs certain printing. The boys do it under the care of a competent instructor, and thus is not only done the printing needed, but, better and far more important, as it is the very heart and soul of the School purpose, the School makes out of the raw material of unformed boys skilled printers who may later serve society in that capacity, earn honest livings and become useful citizens. The copy of this report as submitted was set in type and printed at the School by the boys. It has been the desire of the managers of the School for years, and it is now their desire, to have the School entirely exempted from the operation of the State printing law, to the end that it may do its own printing with its own boys in its own printing office. Considerable money will be saved to the State if this were done.

In this connection it is pertinent to say to the employers of Indiana on farms and in factories, wherever in fact there is work to be done, that each year from one to three hundred boys are sent out from the school on their "honor." They have been instructed as already outlined. Some go back to their own homes. Others who have no homes or whose homes are such as it would be undesirable to send good boys to, it is necessary for the School management to secure homes and employment for.

Probably there are in Indiana several thousand married couples who were either never blessed with children or whose children coming to years of maturity have left the home roof tree. Many such homes would be a harbor of refuge to a homeless, or worse than homeless boy, and to such homes many of the boys graduated from this school would be a benediction, bringing the stir and joy and hope of youth, lightening and brightening life and lessening the burden of those who might give them a home. Employers or childless old people in need of a boy might secure just what they want by addressing a letter to Superintendent York, stating their situation and desires. He would deal with them frankly and send them a boy who had obtained his "honor." This is not an experiment. It has been tried in multiplied scores of cases and both parties to the arrangement have been benefited. So long as the boy behaves himself he will be left with those to whom he has been sent, provided he is well used, for it is the business of the School management to see that the boy is not neglected or mistreated. In this way the individual citizen will supplement

and carry forward the beneficent purposes for which the school was organized and has been maintained by the wise liberality of successive Governors and Legislatures.

Indiana's choicest product is her boys of today who will be her citizens tomorrow. Now they need the fostering care of the State and its supporting arm. In the years to come their shoulders will bear the burdens of citizenship and exercise its privileges. Characters are building now. Upon the strength and sturdiness of those characters will depend the stability of the State in the years to come.

Closing this report, it is a pleasure to the Board to testify to its appreciation of the help rendered the School by the Board of State Charities. It has been the elder brother in counsel, critical but kindly always, obviously a friend, for the truest friendship to honest and ambitious management is to point out where improvement can be made.

During the year the Board has been faithfully served by Superintendent E. E. York and the Matron, Mrs. Julia F. York, and a corps of efficient and loyal associates. To their fidelity and heart interest in the arduous work that has fallen upon them is due the marked success of the School during the past year.

Respectfully submitted,

WILLIAM C. VAN ARSDEL,
President.

JOSEPH B. HOMAN,
WILLIAM C. BALL,
Commissioners.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Control:

Gentlemen—I hereby submit to you my sixth annual report of the Indiana Boys' School and the fortieth annual report of the institution for the year ending October 31, 1906.

In retracing the numerous events that go to make up institution history during the past year, we are pleased to report in a summary of the whole much progress toward the betterment of the School's various needs, although a few of our pet theories and dreams did not become realities.

We have been blessed with bountiful crops, excellent health, and above all a spirit of good will and harmony pervading the institution atmosphere, for all of which we are devoutly thankful.

The silent messenger, Death, called but twice, as follows: On March 20, 1906, Ernest Wakefield (colored), No. 4,807, died with a complication of asthma and bronchitis. On April 24, 1906, Willie Edmonds (colored), No. 5,695, died with pneumonia and tubercular troubles.

The past year notes continued work on new buildings begun last year, and in addition the erection of a new bakery at a cost of \$2,000, a new warmhouse for the storing of garden products for winter use at a cost of \$500, 19,387 square feet of cement walks, at a cost of \$1,000; also \$500 expended for fire protection.

When all the new buildings now under process of construction are completed and occupied, we confidently hope for better and more satisfactory results to both pupils and management.

The heating plant, which was partially remodeled last year, is not adequate for both heat and power. We wish to call your attention to a further repairing and enlarging of the heating and power system.

In fact, the very life of the school, and more especially the industrial department, depends upon power to keep their machinery in motion for the operation of trades teaching.

We earnestly hope the next Legislative Visiting Committee will fully appreciate these needs for the heating system, and recommend that the necessary appropriations be made to fully repair and equip said plant according to the following suggested changes and additions, viz.: The steam mains should be extended through tunnels to new cottage and new manual training building and steam heating installed in these buildings. 2d. Heating for laundry and school building be changed from live steam to the vacuum system. 3d. Old indirect radiators in basement of all cottages are inefficient and unsanitary, and should be replaced with direct radiators located on the first floor. 4th. Two additional boilers of 150 H. P. each should be installed in the powerhouse for alternate use with the present boilers and as a reserve in emergencies. The present boiler plant is taxed to its full capacity for power and heating in cold weather.

ADDITIONAL PAROLE AGENT.

Beg to advise if the great work of reclaiming the boys committed to the School's parental watch, care and guardianship is to be vigorously and systematically done, the services of at least one or more parole agents will be required.

We now have 673 boys under twenty-one years of age out on parole. Our policy has been to parole boys just as soon as possible, according to the rules and regulations governing our merit and parole system, as we believe a boy ought to be placed upon his own resources if his home environments will admit, and thus be free from a tendency favoring dependency. With this policy as a basis, we have paroled over 900 boys during the last three years, and without the close supervision necessary many of them have been recalled, which in part accounts for the large percentage of return boys.

The sure cure for delinquency or criminal tendencies in a boy or girl is constant supervision by a common-sense, judicious probation or parole agent. The more parole officers of the right sort, the more boys we will reclaim and restore to society again. The carrying on and out of this system of supervision means additional appropriation, say at least \$2,500.

APPROPRIATIONS.

Our present annual appropriation has not been sufficient for actual maintenance requirements. Had it not been for the per capita allowance over 570 boys and the rich crops harvested, which amounted to \$17,104.34, the regular maintenance appropriation would have fallen short by at least \$12,000.

Our present cost for maintenance is \$75,000 per annum, and a per capita allowance of \$114 per boy above an enrollment of 570. The annual appropriation for ordinary repairs is \$7,000.

I recommend the following regular and specific appropriations for the biennial period including the years 1908 and 1909:

Maintenance, regular, \$85,000. (This to include \$2,500 for the supervision of boys on parole.)

Ordinary repairs, \$7,000.

Specific maintenance for the present fiscal year, 1907, \$6,500.

SPECIFIC APPROPRIATIONS.

Repair of power and heating system:

1st, two new boilers, 150 h. p.....	\$5,000
2d, two dynamos, 50 k. w., and engines.....	4,500
3d, one electric pump.....	1,200
4th, heating new cottage, M. T. shop, and school building.....	3,600
5th, changing radiation in all cottages.....	2,000
6th, two additions to power house.....	1,500
7th, new chapel and gymnasium.....	25,000
8th, manufacturing and burning brick.....	1,000
9th, new sidewalks.....	500

Total specific.....\$44,300

FARM.

A comparison of our farm products for 1906 with those of 1905 readily shows the wisdom of the Board in purchasing additional land last year.

Below we give tables showing crops for the biennial period 1905 and 1906:

	1905.	1906.
Number bushels asparagus.....	17½	9½
Number bushels beets.....	292	541
Number bushels lima beans.....	32	53
Number bushels string beans.....	1,506	1,033
Heads of cabbage.....	7,676	4,660
Bunches of celery.....	8,024	324
Number bushels cauliflower.....	2	12

	1905.	1906.
Number bushels carrots.....	55	75
Dozen sweet corn.....	8,302	12,211
Number dozen cucumbers (green).....	412	124
Heads of egg plant.....	68	
Number pounds lettuce.....	1,330	1,315
Number muskmelons	10,127	3,970
Number watermelons	1,031	1,798
Number bushels onions.....	541	461
Number bushels peas.....	196	82
Number bushels parsnips.....	210	115
Number dozen M. peppers.....	400	277
Number pumpkins.....	4,832	3,820
Number bushels Irish potatoes.....	3,838	2,212
Number bushels radishes.....	65	88
Number bushels rhubarb.....	88	81
Number bbls. spinach.....	142	66
Number squashes.....		125
Number bushels tomatoes.....	826	565
Number bushels turnips.....	703	810
Number bushels sweet potatoes.....	266	245
Number pounds sage.....	20	50
Number bushels navy beans.....	300	347
Number barrels sauer kraut.....	5	1
Number barrels cucumbers.....	39	
Number gallons corn in brine.....		720
Number bushels horseradish.....		5
Number salsify.....	15	15
Number bushels cayenne pepper.....		2 $\frac{1}{2}$
Number bunches parsley.....	158	
Number bunches strawberry tomatoes.....	6 $\frac{1}{2}$	2
Number bushels popcorn.....	10	3
Number bushels grapes.....		6,335
Number gallons cherries.....	46	1,300
Number bushels apples.....	474	1,245
Number gallons tomato preserves.....	331	760
Number gallons grape butter.....		6 $\frac{1}{2}$
Number gallons piccalilli.....		7
Number gallons canned grapes.....		20
Number gallons tomato butter.....	21	3
Number gallons pear preserves.....	15	7
Number gallons mango pickles.....	128	15
Number gallons tomato catsup.....		3
Number gallons sorghum molasses.....	163	50
Number gallons strawberry preserves.....	395 $\frac{1}{2}$	197 $\frac{1}{4}$
Number pounds dressed beef.....	2,520	4,127
Number pounds dressed veal.....	755	66
Number pounds dressed pork.....	13,531	12,506 $\frac{1}{2}$
Number gallons milk.....	14,824	18,506 $\frac{1}{2}$
Number pounds butter.....		484
Number bushels corn.....	1,991	2,850

	1905.	1906.
Number bushels wheat.....	615	1,040
Number bushels rye.....		184
Number bushels oats.....	750	305
Number tons ensilage.....	70	70
Number tons timothy hay.....	60	68
Number tons straw.....	20	50
Number pounds broom corn.....	950	50
Number pounds chickens.....	965½	1,080
Number dozen eggs.....	411½	524½
Number bushels onion sets.....	20	10
Number gallons raspberries.....	27	2
Number bushels crab apples.....	65	61
Number bushels pears.....	21	32
Number gallons apple preserves.....		80
Number gallons strawberry preserves.....	4½	7
Number bushels gherkins.....		10
Number pints jelly.....	200	151
Number gallons pumpkin butter.....		300
Number gallons apple butter.....		59
Total value.....	\$13,468 91	\$17,104 34

RESIGNATION OF CLERK E. A. WILEY.

On June 30th, Mr. E. A. Wiley resigned as Clerk of the School. His retirement was felt to be a great loss to both Superintendent and Board. Mr. Wiley, by his close application to duty and courteous manner and treatment to all, won for himself the good will, confidence and esteem of the entire corps of employes as well as of others with whom he had business dealings.

His five years' experience made his services valuable to the State, as he was a man of clean character and the strictest integrity. His successor, Mr. W. S. Reynolds, has entered upon his duties, and we hope will attain and keep the high standard of excellence as set forth by Mr. Wiley.

SUBORDINATE EMPLOYEES.

We have in our employ a corps of forty-six teachers and officers, who in a great measure have contributed to our success by their faithful attention and performance of duty, thus reflecting credit upon the School and themselves.

We appreciate such subordinates, but do not hesitate to say that an institution is no place for a lazy, indifferent or disgruntled person. In all of our institutions employes creep in who in a few days think they are competent to advise the Superintendent or Warden of their shortcomings, etc.

The successful employe not only studies his pupils, but studies his obligations to the State as his employer, and to the boy or man he supervises, with a view of reforming or remodeling his dwarfed ideas of life by instilling into his mind clean and noble thoughts of what constitutes right and holy living, thereby leaving an impression for strong manhood and better citizenship. The employer does this more by precept and example than by oral instruction; hence how important it is that the highest type of men and women enter institution service.

In many instances the wages paid for institution help is too low to command the attention of capable teachers and instructors.

My experience has been in the great majority of cases that you get that alone for what you pay. If our public schools demand and pay for the very highest grade of culture, talent and skill, the same argument will doubly apply to the training and education of the delinquent, truant and incorrigible boy or girl, who perhaps through no fault of their own, but from hereditary, civil and social causes, have become discouraged, and naturally seeking relief and comfort from their disturbing condition, drift into unwholesome environments and at last are engulfed in the great sea of vice and crime.

We hasten the day when many of our institution employes will be graduates of schools for trained social work.

CO-OPERATION OF MARION COUNTY JUVENILE COURT.

We have been co-operating with Judge Stubbs and the Marion County Juvenile Court for three years with both success and satisfaction to the school, as the scheme of returning paroled boys back to the court from whence they were committed for placement is no longer a theory. Our arrangement with the court enables us through the court's agents to find suitable homes and employment for all Indianapolis boys. During the past year fifty-six boys were paroled to the court and placed under probation supervision. Of this number eight have been recalled for violating their parole requirements. One hundred and thirty-nine boys have been released to the court since November 1, 1904, and of this number twenty-eight have been recalled to the School. While this is an excellent showing, we are thoroughly convinced that the services of another parole officer would greatly reduce this number to a

small percentage of returns for parole violations or unfavorable home conditions.

We feel truly grateful to Judge Stubbs and his excellent corps of probation officers for their deep interest and untiring efforts in securing homes and employment for our Marion County boys now enjoying parole. We are looking forward to the day when a similar arrangement can be effected with all the probation officers and juvenile courts throughout the State, for by this means we can place our boys in proper homes and have them more thoroughly supervised by agents who are familiar with their former environments and associations, and who can thus guard against a repetition of the conditions that brought about their first transgression of the law.

POPULATION MOVEMENT.

Admissions since the organization of the school, January 1, 1868....	6,253
Number discharged owing to age limit, October 31, 1905.....	4,223
Number attaining age limit from Oct. 31, 1905, to Oct. 31, 1906.....	164
Total discharges on age limit October 31, 1906.....	4,687
Number on leave of absence October 31, 1906, and subject to the School's supervision if not dead or incarcerated elsewhere.....	673

DISCIPLINE AND MERIT SYSTEM.

The discipline and general deportment of the boys in the School has been very satisfactory. The increased number of escapes over the past few years is due to their betrayal of trust, as many boys have been trusted because of the extra amount of new building work that had to be completed before the close of the fiscal year.

We are pleased to report that the boys as a whole have been obedient, cheerful and willing to perform either work or study assigned to them.

We are still partial to some form of a merit system for grading a boy's deportment standing after his admission to the School. We do not claim we have the best system for grading, as there are defects in all when applied to every breach of conduct that can be listed.

For the benefit of those interested we submit the merit system in vogue here.

DEMERIT OFFENSES.

Planning escape.....	500
Escape	1,000
Secret vice.....	1,000
Planning immoral association.....	1,000
Immoral association.....	2,000

Failure to report to be doubly demerited according to the offense concealed. Offense for which there is a demerit of fifty or over shall, in addition, be liable to corporal punishment at the discretion of the Superintendent. The Superintendent reserves the right at all times to cancel demerits. An officer must be absolutely certain that a boy is guilty of violating a rule before a demerit report is given.

When a demerit is given it should be the duty of the officer to be explicit with the offender. The boy begins with naught (0) to his credit and gains ten merits each day for perfect conduct. Thirty days of continuous good behavior entitles the boy to 100 extra merits, 400; for ninety days' continuous good behavior he is given an additional credit of fifty merits, 1,250; thus making it possible for the boy to gain the required number, 5,000, on the three hundred and sixty-fifth day from date of admission, and thus be eligible for parole.

During the year 216 boys were committed to the School from the following counties:

SCHOOL REVIEW.

The School organization consists of five grade divisions, including the common school outline of studies from the primary to the completion of the eighth year work. The divisions are presided over by five teachers, selected because of their fitness for the school-room.

The pupils are classified according to their previous standing and promoted from grade to grade as their advancement in their studies appears to justify, and are incited in this and other ways to exert themselves to their own improvement. The results attained compare favorably with those of similar grades in any of our public schools. Every boy is required to attend school one-half of each day during the school period and such a thing as playing truant is entirely unknown.

We try to make our school work as thorough as possible during a boy's limited stay in the school. The work in the lower grades has been more agreeable to both teachers and pupils because of but little interruption, while the 6, 7 and 8-year boys are called out quite frequently to assist in carrying forward the extra amount of new building work under construction, yet with their discouragements seven boys were able to graduate from the eighth-year course, and after appropriate graduating exercises were given their diplomas as Hendricks County graduates.

TRADES TEACHING.

Our trades and manual schools, with the exception of the blacksmithing department (which has been closed since April 30th), have been in successful operation, all of which, under their efficient instructors, have contributed toward the School's necessary routine work and maintenance.

We send boys out prepared to earn their living at the following trades:

Brickmaking.
Brickburning.
Bricklaying.
Plastering.
Painting.
Gasmaking.
Steam fitting.

Plumbing.
Bread making.
Cooking.
Shoe mending.
Dairying.
Floriculture.
Carpentering.

Laundrying.
 Printing.
 Blacksmithing.
 Band and orchestra music.

Broom making.
 Sloyd working.
 Tailoring.
 Gardening and farming.

The Indiana Boys' School emphasizes training that will enable a boy to become a bread earner. Reformation and industrial training go hand in hand and are inseparable.

HOLIDAYS OBSERVED.

We constantly teach those things about our country which all should know, and to honor the flag as the representative of our Republic. We do not believe that boys anywhere in Indiana or the United States are more patriotic than those of this School. We observe the following five patriotic holidays:

First—Lincoln's birthday, February 12.

Second—Washington's birthday, February 22.

Third—Decoration day, May 30.

Fourth—Indiana day, December 11.

Fifth—Fourth of July.

Also three religious holidays:

First—Christmas.

Second—Easter Sunday.

Third—Thanksgiving day.

On all of these days we have chapel exercises appropriate to the day, and in some cases an additional entertainment at night.

MUSIC.

We still adhere to our former belief that music is a very prominent feature in the life and everyday spirit of any institution. We now have a band of twenty-six pieces, orchestra of twelve pieces and a glee club, all taught by Prof. G. W. Milhous, who is also in charge of all choir singing and vocal music during chapel or Sunday-school exercises. In order that more thorough instruction be given to orchestra and glee club, I recommend the purchase of a piano for the classes in the band and music room.

RELIGIOUS TRAINING.

I can only repeat what has been previously said many times that moral instruction is begun on the day a boy enters the School and continues until the day he is released.

Profanity and various forms of immorality are severely dealt with at all times. Boys are taught to do right, and that wrongdoing is never countenanced by upright, law-abiding men and women.

Rev. W. P. McKinsey has proved a valuable help to the boys in putting forth every effort from pulpit and close association by both word and deed to inspire and lead them to higher ideals of Christian and right living. Brother McKinsey has won the confidence of the boys by his cheerful and kindly disposition toward one and all.

The spiritual wants of our Catholic boys have been attended to by the Rev. M. J. Gorman, assistant priest of St. John's Church, of Indianapolis, Indiana. Father Gorman's work can not be underestimated, for we doubt not that many of our Catholic boys will retrace their steps because of his urgent appeals to them to remember the higher life.

CONCLUSION.

In closing, Mrs. York and I wish to thank your Honorable Board for the confidence you have placed in us and for the courtesy and kindness with which we have been treated by its individual members.

To all the officers and ladies who have labored so patiently and faithfully fourteen hours a day, I desire to return my grateful appreciation and many thanks.

Respectfully submitted,

EUGENE E. YORK,
Superintendent.

PHYSICIAN'S REPORT.

To the Superintendent and Board of Control:

Another year in the history of the Indiana Boys' School is numbered with the past and we are reminded that the annual report from this department is now due. The following is a detailed statement taken from the hospital records:

Number of boys admitted during the year, some of whom were received two, three and four times.....	349
Number of different boys admitted.....	311
Number admitted twice.....	27
Number admitted three times.....	10
Number admitted four times.....	4
Number injured (accidents are classified below):	
Number with concussion of brain.....	1
Number burned or scalded.....	8
Number with fingers to amputate.....	2
Number with dislocated finger.....	1
Number with dislocated toes.....	1
Number with sprained ankles.....	5
Number with pistol-shot wound.....	1
Number with broken arm (humerus).....	1
Number with other injuries not classified.....	30
Number cases of follicular tonsilitis.....	18
Number cases of pharyngitis.....	18
Number cases of diphtheria.....	3
Number cases of hip joint disease.....	1
Number cases of corea.....	1
Number cases of chickenpox.....	9
Number cases of malaria or malarial fever.....	59
Number cases of conjunctivitis.....	2
Number cases of phlyctenular keratitis.....	2
Number cases of cold.....	8
Number cases of neuralgia.....	7
Number cases of congestion of the bowels.....	2
Number cases of indigestion.....	67
Number cases of phimosis.....	1
Number cases of rheumatism.....	3
Number cases of venereal disease (syphilis).....	1
Number cases of venereal disease (gonorrhea).....	1
Number cases of venereal orchitis.....	1

Number cases of catarrhal fever.....	1
Number cases of bronchitis.....	5
Number cases of abscess on ear.....	3
Number cases of dysentery.....	3
Number cases of appendicitis.....	3
Number cases of hernia.....	2
Number cases of pneumonia	7
Number cases of abscess.....	8
Number cases of pleurisy.....	1
Number cases of croup.....	1
Number cases of cystitis.....	3
Number cases of frosted feet.....	1
Number cases of erysipelas.....	2
Number cases of ivy poisoning.....	7
Number cases of catarrh of stomach.....	2
Number cases of diarrhea.....	2
Number cases of cholera morbus.....	1
Number cases of varicose veins.....	1
Number cases of hay fever.....	2
Number cases of intermittent fever.....	2
Number cases of pawpaw poisoning.....	2
Number cases of eczema.....	1
Number cases of erythema.....	1

Under the item of malaria or malarial fever are included conditions where malarial symptoms predominated in the sickness, either in the form of intermittent fever, remittent fever and malarial continued fever, the so-called typho-malarial fever.

Injuries are not included in this report except in cases in which the boys receiving them were retained in the hospital for one or more days.

There have been two deaths during the year.

Ernest Wakefield entered the hospital March 1st suffering from a severe attack of bronchitis, complicated with asthma; after three weeks' sickness he passed away, March 20th.

William Edmonds was admitted March 16th with pneumonia, and died April 24th. Edmonds had tubercular trouble and lacked the vital force necessary to counteract so serious a disease as pneumonia.

While there has been considerable sickness in the school, it has not been of such a nature that would attribute it to unsanitary conditions of the premises, but simply such diseases as physicians in private practice are meeting in this climate.

Examination of the buildings, basements, closets, sewer plant

and water supply for the most part have been very satisfactory from a sanitary point of view. We would suggest, however, that some of the water-closets be provided with better means of ventilation, and that the sleeping apartments and schoolrooms always be well ventilated.

There has been no epidemic of any serious disease during the year. Chickenpox was prevalent for a few weeks last winter, but was so mild that but few cases were cared for in the hospital.

Three cases of diphtheria occurred, but fortunately the disease was checked before assuming an epidemic form.

Former reports have mentioned the needs of better hospital facilities. We hope to realize these advantages when the new building is ready for occupancy.

Some things have already been obtained to improve the service in this department and we are informed that arrangements are being made to furnish other needed improvements.

My relations with the Superintendent, Board of Control and other officers of the School during the past year have been very pleasant. Trusting that such may continue and that all may work together for greater efficiency in all departments of the institution, this report is respectfully submitted.

JOHN S. RAGAN, M. D.

CHAPLAIN'S REPORT.

To Col. E. E. York, Superintendent of Indiana Boys' School:

It is time for the Annual Report to be written. What shall I write? I think I prefer to tell of the successes rather than the failures. There have been enough of the latter and too few of the former. It has been a year of anxious care and prayer on my part as to how I could best be of service in the delicate and important problems we have had here, as to how we could accomplish the most for humanity and the interest of the State, in the management and training of the fifteen hundred boys who are under the direction of the Indiana Boys' School—six hundred present with us and nine hundred scattered throughout the State on parole.

What an aggregation of perplexities we have had to deal with in the unfortunate and delinquent boys we have had sent to us from homes of almost all kinds and degrees of poverty and vice. Our boys are largely creations of bad circumstances. Drunkenness, licentiousness, dishonesty, divorce and indeed all forms of sin that hunt and haunt humanity have created the need for our Institution and brought us our responsibilities. Our boys have not had a fair chance. Dr. Oliver Wendell Holmes said "A boy's training should begin eighty years before he is born."

In this respect our boys have had almost no training; for they are the children of the delinquent. A boy has a right to be born and reared in a respectable and well-disciplined home. Our boys have largely been deprived of this. The State has made it the business of our Institution in so far as is possible, to remedy the failures and deprivations in the past of the lives of the boys committed to us. We are here to try and give every boy committed to us a fair and equal chance with every other boy of the State of Indiana.

I congratulate you as Superintendent and all your co-workers on the many successes that have attended our efforts. It has been

my happy privilege and opportunity, in my best possible way, publicly and privately, to administer the gospel of the grace of God to the boys.

I am quite happy to be placed here by the authority of our great State "to preach deliverance to the captives." I believe in the gospel, its remedial efficiency and power. I regret more than I can tell that I am not a better exponent and a more able dispenser of the "Word of Life."

I am cheered with the consciousness that our labors together have not been without fruit. I pray that the blessings of Him, without whom we labor in vain, may attend us all and "establish the work of our hands."

I return sincere and grateful thanks to the Board of Control, the Superintendent and all officers and ladies for uniform kindness and helpfulness.

Respectfully submitted,

W. P. McKINSEY,
Chaplain.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer December 15, 1906.

HARRY SLOUGH,
Clerk Printing Bureau.

REPORT OF THE STATE BOARD OF TAX COMMISSIONERS.

OFFICE OF THE STATE BOARD OF
TAX COMMISSIONERS OF INDIANA. }

To the General Assembly of Indiana :

GENTLEMEN—In obedience to law, the State Board of Tax Commissioners begs leave to submit the following :

The two years covered by this report have presented to the board duties of the regular order as prescribed by the laws governing the work of the board, and the results of the board's labors have been set out in the report of its regular annual sessions, copies of which are transmitted herewith. Detailed reports at this time are, therefore, considered unnecessary.

During the past two years, it has been the chief aim of the board to obtain a more just and equitable listing and valuation of all classes of property of the state. There having been no real estate assessment, all the time of the commissioners could be, and has been given to the ascertainment and assessment of the great body of property, much of it intangible and hidden, that enriches the land and our citizens, and yet in great measure denies to the state and county its proportionate burden of the expenses of government. This is the difficult problem in taxation. The tangible property that can be described by metes and bounds, its ownership accurately and surely established, the location and condition of which is known to all, can not escape the duplicate. It is the first assessed and the whole question in its assessment is its valuation. This to conscientious and painstaking officers, becomes a matter of calculation. As to such property, the board feels that at the last regular assessment it was placed on the duplicate at a fair cash value. During the years since the last real estate assessment, real estate has wonderfully increased in value, and today there is a large discrepancy between its value and assessment. But, in a rapidly growing state, such as ours, where values rise constantly and rapidly, this will always be the case, so long as real

estate is assessed at intervals of four years. During the past four years the values of farm property, and in most cases of city property, have shown a wonderful increase, and in consequence the duplicate will be largely increased by the real estate assessments to be made this year. It can not be estimated how much of an increase from this source may be expected but it will be large—very large. The laws governing the assessment of this kind of property are ample, and if honestly and conscientiously followed by all officers interested with its execution will insure a fair valuation.

In the assessment of personal property, uniformity of effort and equalization of values have been the aims. Through the medium of the conference convention of County Assessors with the State Board of Tax Commissioners, the board has undertaken to reach every Township Assessor in the State, and in this way obtain systematic effort toward the discovery of hidden and sequestered property, and the listing of all personal property at an equal and true cash value. These County Assessors' conventions have been closely followed up by district meetings of County Assessors, and county meetings of Township Assessors, at all of which meetings one of the Tax Commissioners has been present. In this way, every assessing officer has been reached, and uniform plans of action inaugurated and executed. The result has been a very large increase in the personal property assessment of the State and at uniform valuations. The personal property upon the duplicate in 1900 was \$332,857,739 which has been increased until in 1906 it amounted to \$403,722,622 or an increase in six years of \$70,651,458 or a little over seventeen and one half per cent. This is a record worthy of our State, its laws and its officers. The theory of our law demands the assessment of every piece of property, and of all value at its true cash worth, and in return for this promises a low rate of taxation and burdens distributed to, and falling lightly and evenly upon all.

The property coming directly under the power of the State Tax Board has increased in extent and the assessment has been very largely increased by the board during the past few years. In 1900 the property assessed by the State Board amounted to \$161,966,956, while the assessment made in 1906 was of the amount of \$224,377,446, an increase in six years of \$62,410,490

or a little over twenty-seven and one-half per cent. The valuations of 1905 and 1906 are as follows:

	1905.	1906.
Railroads (steam).....	\$169,372,213	\$183,670,955
Interurban and city railroads.....	15,452,321	20,616,599
Telephone companies.....	7,872,496	8,934,247
Telegraph companies.....	2,258,805	3,717,041
Express companies.....	1,072,745	1,034,532
Pipe line companies.....	4,625,448	5,166,654
Sleeping car companies.....	433,709	652,907
Fast freight lines	478,858	584,511
Total.....	\$201,566,595	\$224,377,446

or an increase of \$22,810,855.

This class of corporate property is increasing very largely every year, and, it is fair to predict, will assume its share of public burdens from year to year.

The returns of the county auditors to the Auditor of State show a marked improvement in the collection of taxes during the past two years. Officers have been more vigilant and the people are looking more carefully to this duty every year, and saving themselves the embarrassment of the penalty upon, and the advertisement of their property for tax sale, by paying promptly, and thus giving the money at once to the purpose for which it was assessed. There still remains a great burden to the duplicate in the small amounts that are allowed to go delinquent, and for which there seems to be no property at hand upon which levy may be made to force collection. Every year tens of thousands of dollars are carried to the worthless tax register because they can not be collected. These taxes are in a great measure against able-bodied young men, who enjoy all the privileges of citizenship, share in the blessings that good government, supported by taxes, affords, but who do not in any way contribute to its support. This is wrong, and some way should be found to force collection. While not over six per cent. of the taxes assessed against property remains uncollected, over forty per cent. of the poll taxes assessed are carried to the insolvent tax duplicate. This is disgraceful, and we believe the rights of such men to suffrage at the polls should be denied them.

The State, by reason of the largely increased duplicate, has been able, not only to very greatly reduce the bonded indebtedness of the State and to maintain, improve and enlarge the benevolent and educational institutions of the State, but also to spend large sums of money in providing for several new institutions for the wards of the State, viz.: the Southeastern Hospital for the Insane; the Girls' Industrial School, and the Village for Epileptics, without any increase in the State tax levy. The State tax is not burdensome, and the citizens pay it cheerfully and make no complaint. In many counties, cities and towns of the State, notwithstanding the largely increased duplicate, the tax levies have increased year after year until the taxes have become a great burden, and there should be some relief afforded the citizen. We renew our recommendation that there be a limit fixed to the rate upon every hundred dollars that a county, township, town or city may levy for the payment of *all* its expenses.

The board hesitates to propose changes in the laws of the State, but feels that for the good of the State a few are necessary, and it therefore respectfully recommends the following and urges their formulation into law:

1. That the law be so amended as to give the State Board of Tax Commissioners more time in which to make the assessment of the property which by law it is required to assess.

As the law now stands the Board only has twenty days for the hearings and assessment of property, and we submit that the time is too short for the careful consideration and investigation that should be given to this great class of property which amounted, in 1906, to \$224,377,466, and that the time ought to be extended to at least forty days.

2. That there ought to be some provision made for the equitable assessment of Private Banks.

We know of no reason why private banks ought not to pay taxes the same as other persons engaged in the same line of business and believe that National, State and Private Banks and Trust Companies should all be treated alike in the assessment of their property.

3. That the law defining the owner, for taxation, of Chattels mortgaged or pledged should be repealed.

The present law permits Notes, Bonds, Stocks and other personal property, mortgaged or placed as collateral with corporations, when stock is assessed to escape taxation.

4. That what is commonly known as the mortgage deduction law should be made more specific as to the making of affidavits and more safeguards thrown around the allowances.

A law which permits the exemption of more than \$50,000,000 worth of real estate each year should be so specific as to leave no doubt as to its meaning.

*Total Collection of All Taxes by Funds for May and December
Settlements, 1906.*

Tenth Biennial Report of the Trustees
and Medical Superintendent

OF THE

Northern
Indiana Hospital for Insane

AT LONGCLIFF, NEAR LOGANSPOUT

FOR THE

Biennial Period Ending October 31,
1906

To the Governor

INDIANAPOLIS

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING

1906

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
November 30, 1906. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 12, 1906. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

DECEMBER 12, 1906.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

FRED L. GEMMER,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 12, 1906.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer December 17, 1906.

HARRY SLOUGH,
Clerk Printing Bureau.

ELMER E. WORSTELL.

Assistant Clerk.

ABBY G. HOWE.

REPORT OF BOARD OF TRUSTEES.

HON. J. FRANK HANLY, *Governor of Indiana*:

Sir—For the biennial period ending October 31, 1906, the Board of Trustees of the Northern Indiana Hospital for Insane respectfully submits the following report, together with that of the Medical Superintendent, with the accompanying financial and statistical tables.

During the period there has been no change in the personnel of the Board, Mr. Warren T. McCray, of Kentland, having been re-appointed for a second term of three years beginning January 1, 1906, and the organization has been continued without alterations.

The operations, conditions and needs of the hospital are set forth in detail in the Superintendent's report and the appended tables, to which you are respectfully referred.

The prompt and judicious provision of the legislature has enabled the trustees of the institution to continue the policy of general physical improvements in various departments, more particularly in those which are accessory and which bear no particular relation to capacity or to the accommodation of patients. In this connection the Board wishes to especially recognize the perspicacity and wise liberality of the legislative committee of 1905, which so promptly comprehended and so earnestly endorsed the plans of this Board. The total sum appropriated and used for major improvements of this class was \$10,000. For it the Board has to show a perfected hot water system, ample in its capacity for all present and reasonable future needs, designed so as to reduce to a minimum the expense and trouble of its care and maintenance and especially well fitted for handling the hard water everywhere to be found in our State; an excellent and very complete laundry equipment; tile floors in every part of the hospital where tile floors should be; and a complete restoration, in the original design, of roof cresting, hip rolls, finials, etc., on every building in the hospital.

With an expenditure of forty thousand dollars appropriated for the fiscal year ending October 31, 1906, one-half of the total appropriation for the purpose, most satisfactory progress has been made in the building of two additional structures which will increase the capacity for the accommodation of patients by 150 beds. It is expected to finish these buildings early next year. The management, it is hoped, will then be enabled for some time to come to meet all requirements of the northern district for insane.

At present and for some months past the accommodations for men have fallen far short of the demand, and at present there are about twenty suspended applications on file. Fortunately the room for women is ample. The tent continues to provide a home for thirty male patients, both in summer and winter, seemingly to their great satisfaction. In furtherance of the policy of improvement, the Superintendent urges certain repairs, changes and additions, all of which have carefully been considered by this Board and all of which it earnestly endorses, and it is hoped that means may be found to carry all of these propositions into effect.

The general operations and conditions of the hospital in its various departments have been carefully studied by this Board, and its comments and criticisms are recorded monthly in its transactions. The Board has reason to believe that the officers and employes have, with very few exceptions, made honest effort to fill their individual parts with strict regard for the rules and principles of the organization which outlines their work, and that the greatest good and highest degree of comfort to the inmates, consistent with the conditions, is their constant and chief aim.

The Board desires to say for itself that while economy in the use of funds has been carefully studied, the maintenance of a proper standard of excellence in service and in material things has been considered with equal care.

For the past biennial period the various funds appropriated for general maintenance, clothing and repairs have been sufficient. For the biennial period commencing November 1, 1907, for each year, it is recommended that there be appropriated for maintenance \$135,000, with the addition of \$160 per capita for inmates in excess of 848.

For clothing	\$6,500 00 ^c
For repairs	8,000 00

The assets of the hospital are shown to be as follows:

Real estate	\$643,787 92
Equipment	100,053 38
Total	\$743,841 30

The gain for the biennial period has been:

Real estate	\$8,821 45
Equipment	10,855 09
Total	\$19,676 54

Funds and disbursements are set forth in detail in the appendix.
No accounts payable are outstanding.

Very respectfully,

CHAS. W. SLICK,
HENRY A. BARNHART,
WARREN T. McCRAY,
Trustees.

NORTHERN INDIANA HOSPITAL FOR INSANE.

SUMMARY OF NEEDS

For the Biennial Period Ending October 31, 1909.

FOR CURRENT EXPENSE.

Maintenance (for S4S)	\$135,000 00
Clothing	6,500 00
Repairs	8,000 00
Total annually	\$149,500 00

FOR MAJOR IMPROVEMENTS.

General water purification.....	\$4,500 00
Extension of refrigerating system.....	4,000 00
Enlargement of assembly hall.....	5,000 00
Laboratory	6,000 00
Root house	2,500 00
Floor repairs, entrance hall, administration.....	1,000 00
Alterations Fifth and E wards.....	2,000 00
Available at once and until October 31, 1909.....	\$25,000 00

REPORT OF MEDICAL SUPERINTENDENT.

To the Board of Trustees:

Gentlemen—As prescribed by law, I have the honor to report the operations of the Northern Indiana Hospital for Insane for the biennial period ending October 31, 1906, and its present and future needs as follows:

MEDICAL HISTORY.

MOVEMENT OF INMATES.

Year Ending October 31, 1905.

Movement.	Men.	Women.	Total.
Enrolled November 1, 1904.....	486	460	946

Year Ending October 31, 1906.

Movement.	Men.	Women.	Total.
Enrolled November 1, 1905.....	491	461	952
Admitted	83	80	163
Discharged	57	47	104
Recovered	6	10	16
Improved	48	35	83
Unimproved	2	1	3
Not insane	1	1	2
Died	35	41	76
Furloughed October 31.....	35	44	79
Average actually resident.....	442.81	405.799	848.6
Enrolled October 31, 1906.....	482	453	835

Further details of movement and general medical statistics are set forth in an appendix. A summary of these tables is as follows:

PSYCHOSES OF ADMITTED. During the last two years there were admitted 410 patients. Of these, 64 (16 per cent.) were cases of acute mania; of chronic mania there were 46 (11 per cent.); of epileptic mania, 6 (1.4 per cent.); melancholia, 132 (32 per cent.); primary dementia, 12 (3 per cent.); secondary dementia, 4 (less than 1 per cent.); senile dementia, 35 (8.5 per cent.); epileptic dementia, 11 (2.8 per cent.); paretic dementia, 26 (6 per cent.); paralytic dementia, 10 (2 per cent.); paranoia, 32 (8 per cent.); katatonia, 4 (1 per cent.); dementia præcox, 22 (5 per cent.); epilepsy, progressive chorea, and neurasthenia, of each, less than 1 per cent.; and not insane, 8 (2 per cent.).

PSYCHOSES OF RECOVERED. During the first year 56 (14 per cent. of admitted) were discharged recovered; during the second year 16 (4 per cent.). Combining the two years, there were 26 recoveries from acute mania (40 per cent. of the number of this class admitted); of chronic mania 3 recoveries and 46 admissions, one recovery occurring after seventeen years' duration; of melancholia 43 (33 per cent. of number admitted),

DURATION OF RECOVERED CASES. The recoveries from acute mania were distributed over a period of from two months to five years; in melancholia from two months to seven years.

MORTALITY. The number under care during the first year was 1,193, the mortality 99 (8.2 per cent.); the second year, 1,115, the mortality, 76 (6.8 per cent.). Combining the two years, deaths were assignable to psychoses as follows: Acute mania, 15; chronic mania, 33; epileptic mania, 7; melancholia, 24; recurrent mania, 33; epileptic mania, 7; melancholia, 24; recurrent mania, 1; epilepsy, 5; epileptic dementia, 9; primary dementia, 6; secondary dementia, 7; dementia præcox, 1; senile dementia, 27; paretic dementia, 29; progressive chorea, 2; paranoia, 5; paralytic dementia, 3; not insane, 1.

THE COMPLICATIONS AND CAUSES OF DEATH were as follows: Organic brain disease, 2; cerebral apoplexy, 11; meningitis, 7; epilepsy, 5; status epilepticus, 2; paresis, 19; senility, 4; inanition, 9; pneumonia, 17; nephritis, 10; pulmonary tuberculosis, 11; pulmonary hemorrhage, 1; asphyxia, 6; influenza, 1; septice-mia, 6; erysipelas, 14; senile gangrene, 1; organic heart disease, 6; angina pectoris, 1; peritonitis, 5; dysentery, 14; hepatic cirrho-

sis, 1; hepatic abscess, 1; locomotor ataxia, 1; bulbar paralysis, 6; exhaustion, 11; cardiac paralysis, 2; cardiac thrombus, 1.

Beginning the latter part of November, 1904, and continuing until March, 1905, there prevailed an extraordinary endemic of glandular fever among the patients and employes. One hundred and fifty persons were afflicted, but all recovered without serious complications or sequelæ, after an illness lasting from a few days to five weeks. The most prominent symptom in every case was a painful swelling of the cervical lymphatic glands, associated with fever. Suppuration occurred in no instance. The bibliography of this malady is extremely limited; but few authorities have so far given it much attention; and its differentiation a few years since by a German observer, Dr. Pfeiffer, judging from the general silence upon the subject in many of the more recent works on internal medicine, does not seem to have been generally endorsed. This is, as far as literature shows, the most extensive endemic of this rare disease yet reported.

During November and December, 1904, and January and February, 1905, erysipelas affected 61 patients, and in 10 cases, for the most part in aged, debilitated persons, proved fatal.

Malarial fevers, formerly rife at Longcliff, have become exceedingly rare. For the last three years the intermittent type has not been observed. But each year, in August or September, a case or two of protracted remittent fever has occurred. Two cases only of typhoid fever have arisen; in both of these there is strong proof that the infection came from the outside. Cases of acute infectious diseases have been exceedingly rare.

At the present time there are but seven well-defined cases of tuberculous diseases of any sort in the hospital. This number includes glandular and joint cases. During the past summer an extended test for tuberculosis by means of tuberculin was carefully made in all cases throughout the hospital, showing persistent debility. Many of them showed no other symptoms. Fifty cases exhibited a conclusive reaction. These are under special surveillance and will continue to be. At the same time measures are taken to give them as much open air life as possible. In one case of tuberculosis of the knee the reaction was extreme and the patient was uncomfortable on account of it for two or three weeks,

during which there was more or less fever. Several months have passed since then, however, the general symptoms have disappeared and the local conditions are very much better than they have been for a number of years.

The most important surgical work comprised the following operations: Hysterectomy, vaginal, 2 cases, 2 recoveries; hysterectomy, abdominal, 5 cases, 4 recoveries; hemorrhoids (clamp and cautery), 5 cases, 5 recoveries; fissure in ano, 5 cases, 5 recoveries; uterine curettage, 6 cases; fracture of hip, 6 cases, 3 deaths, due to cardiac thrombosis; fracture of thigh, 1 case; Colles' fracture, 5 cases; fracture of ribs, 4 cases; fracture of humerus, 1 case; fracture of ulna, 1 case; fracture of phalanges, 5 cases; all with fair recoveries.

Fourteen autopsies were held and findings carefully studied by the staff.

HOSPITAL STAFF. The medical staff has been subjected to an unusual number of changes. In June, 1905, Dr. Edward C. Elder, assistant physician, resigned to enter another field of practice, leaving behind him a record of thoughtful kindness and a host of friends. His place was filled by Dr. George E. Hoffman, of Rochester, Indiana. In October, 1905, Dr. J. Matthew Pulliam left the hospital to begin general practice in Ft. Wayne. His service of three years was especially marked for energy, pertinacity and originality, and did much toward the general betterment of the hospital service. His successor is Dr. M. C. Hawley, of Indianapolis (A. B. Indiana University, M. D. Central College Physicians and Surgeons, Indianapolis). In October, 1906, Dr. Rebecca Parish retired to enter the missionary service, and within the month embarked for Manila to establish a hospital for women and children under the auspices of the Methodist Church. Dr. Parish's service was efficient, thorough and strictly regulated upon the highest standard of duty without any sort of self-regard. Dr. Adele Russell Emerson, of Boston, a graduate of the Women's Medical College of Pennsylvania, has succeeded her.

ADDITIONAL BUILDINGS. The General Assembly of 1905 appropriated \$80,000 to build two additional houses, one for men and one for women, each having a capacity for seventy inmates. Of the above sum but one-half was made available during the fiscal

year beginning November 1, 1905, the remainder during the fiscal year beginning November 1, 1906. Plans and specifications made by the Superintendent and the head carpenter, assisted by the chief engineer, were approved by your honorable board and were adopted, and early in the spring of 1906 the best available sites having been chosen after careful consideration of all conditions and relations, work was begun. Excavations commenced March 12. Contracts for material were made as completely as possible for early delivery, usually with gratifying success, at reasonable prices, competitively secured, the best material of each class being specified. Good weather from the beginning has favored the work and no interruptions have occurred from accident or lack of material or labor. At this date both buildings are under roof and closed from the weather, and the interior work has advanced beyond our most sanguine anticipations. It is expected to finish the buildings during the winter, ready for occupation early in the spring of next year. To this end it is expected to push the installation of the hot water heating system, which is independent for each house.

The building for women comprises two wards, one in the lower story and one in the upper. The rooms and equipment are alike above and below and each affords accommodations for a variety of classes of patients. As a whole it will afford a very agreeable home for the quieter class of patients of subacute and chronic sorts. It is admirably lighted and will afford the most agreeable outlook in all directions for its inmates. The building for men is located some three hundred yards distant, on ground fifteen feet lower, in a group of buildings not connected with the department for women. This building is designed with a view to its being almost solely used for patients whose pleasure it is to work in the open air, on the farm, in the garden, and elsewhere outside of the general ward. It is intended that the routine of its daily life shall be as nearly as possible like that of a large farmhouse, entirely independent and different from, in many particulars, other parts of the hospital. It will have its own kitchen and dining-room and its own meal hours. It will be under the immediate care and management of a man and his wife, the latter having a sufficient number of female assistants, to the end that homelike efficiency may in some degree stamp the cuisine and table service. A desirable amount of separation between the quarters and working-rooms

of the family in charge has been readily secured. The day room, dormitories and other parts of the building will be cared for by male attendants as far as may be necessary and desirable. In this house a number of the farm and garden employes will have their quarters and meals and to a certain extent will take the place of ordinary attendants advantageously. Adjacent to this building is a semi-detached bathhouse for the use, not only of this group, but for all the patients in the hospital as far as may be desirable for hydrotherapeutic treatment, for which it is expected to provide an up-to-date equipment.

In these two buildings the floors of bathrooms, water closets, lavatories, dining-rooms, sculleries and vestibules will be of encaustic tiles. Walls of bathrooms and water closets will be lined with enameled bricks; those of dining-rooms, sculleries, stairways, vestibules and lavatories, with white sand-lime bricks, finished with enameled paint. The foundations are built of a very excellent local silico magnesium limestone laid in cement mortar. The walls are of red brick, laid in ordinary white mortar. The roofs are of slate, and roof trimming, cornices, etc., of extra heavy galvanized iron, following in designs the terra cotta roof trimmings originally used throughout the hospital, which went to pieces after eighteen years of use and which have been replaced in the last two or three years by galvanized iron. The latter, experience teaches, if painted every few years with venetian red, will exactly resemble the terra cotta and will endure indefinitely. The interior finish is of gray ash, to be stained and varnished. Yale locks are to be used for most of the doors.

SPECIAL IMPROVEMENTS.

TILE FLOORS. Using an appropriation of \$2,500 made by the last Legislature, the work of substituting tile for wood in construction of the floors of all bathrooms, closets, lavatories and sculleries throughout the hospital, has been completed in a very satisfactory and permanent manner.

ROOF TRIMMINGS. During 1905 the last remnant of terra cotta roof trimmings, cresting, hip-rolls, finials, etc., crazed, cracked, broken and much of it fallen off after only eighteen years of use, was removed and replaced, in similar design, with heavy galvanized iron, which, painted with venetian red, has exactly the

appearance of the original terra cotta. An appropriation of \$2,500 made by the Assembly of 1905 covered the cost of this improvement.

LAUNDRY EQUIPMENT. An appropriation of \$2,500 of 1905 has paid for a large steam mangle and numerous other pieces of laundry machinery and equipment, which have always been indispensable in a laundry washing 20,000 pieces weekly, but never till now possessed.

HOT-WATER SYSTEM. To meet long-existing conditions, a Hoppes open water heater having a capacity to heat 8,000 gallons per hour to near the boiling point, with exhaust steam, has been installed. The hospital is now supplied with all the hot water it requires for boilers and domestic use, and the carbonates of lime and magnesia are being largely intercepted before the water enters the boilers or is put to any domestic use. The cost of this improvement, \$2,500, was met by an appropriation of 1905, none of which remains. An economy of three tons of coal per diem is estimated by the engineer on account of the substitution of exhaust for direct steam for water heating.

SPECIAL NEEDS.

1. **GENERAL WATER PURIFICATION.** Water may be clear, cold, potable and healthful from a sanitary standpoint and still be so loaded with the carbonates of lime and magnesia and the sulphates of lime as to be unfit for steam-producing boilers, laundering and many other domestic uses. Longeliff well water contains forty-five grains of these salts per gallon. Besides being heated, the water which goes to the power boilers through the heater is cleared largely of its carbonates, but the sulphate of lime is not intercepted and passes to the boilers with the water in solution, there to form an incrustation whose very objectionable and expensive relations are well known. In the laundry water, particularly the cold water, these salts go far to increase the consumption of soap, soda, etc., and indirectly to shorten the life of the fabrics washed in it. The great superiority of soft water above hard water in cooking, bathing and general cleansing, even the veriest tyro knows. Desalification of all water used for boilers, laundry and domestic purposes, is certainly a desideratum which would lead to very considerable betterment and economy as well, both

sensible and insensible, direct and indirect. To secure the best results and the perfection of methods, in my judgment, an apparatus to desalify all water used for any purpose should be secured, or at least an apparatus of sufficient capacity to make soft all waters used by boilers and by the laundry. By the use of small amounts of well-known and very cheap chemicals, namely, lime and carbonate of soda, intermingled with the water as used, a precipitation is secured of the salts before mentioned and after sedation the clear water is ready for use. This method of precipitation known as Clark's process has been known and used to a limited extent for more than half a century. It is only, however, within the last few years that, by certain ingenious but simple devices in connection with proper tankage it has been made acceptable to railroads, factories, institutions, etc., requiring means of softening water. At present there are several companies which offer apparatus for this purpose within economic limits, all of them guaranteeing results. I would recommend that an appropriation of \$4,500 be asked for to provide a water-softening plant of 5,375 gallon capacity per hour. An estimate of requirements is as follows:

For power boilers, 375 gallons per hour (hot water).

For laundry hot water, 1,200 gallons per hour.

For domestic use, 1,800 gallons per hour.

For laundry, cold water, 2,000 gallons per hour.

Total, 5,375 gallons.

2. EXTENSION OF REFRIGERATING SYSTEM. The refrigerating system installed four years ago has been operating with entire satisfaction, very little trouble and practically no expense, except for fuel, in cooling six capacious storage rooms in the cold store during the summer season. The capacity of the central apparatus is not nearly used. No provision was made for manufacturing ice at the time of installation, but arrangements were made to do so in the future if thought desirable. Almost complete failure of the ice crop last winter, entailing a heavy expense for ice the past summer and the uncertain quality of natural ice and the very considerable expense of filling the ice pond at freezing time, together, in my judgment, warrant a recommendation to put in the additional apparatus. Pursuant to plans, specifications and estimates of the makers of the original plant, this will cost \$3,500.

In this connection I desire to repeat the recommendation made in my last biennial report, to extend the brine pipe system from the power house to the administration building, 550 feet, touching on the way the general kitchen and in the latter place as well as in the kitchen of the administration to equip the refrigerators therein located with the necessary pipe coils to take the place for cooling purposes of the ice which has been heretofore and still is used for this purpose at very considerable expense of time and labor and sometimes money, when there has been a failure of the ice crops. The estimated cost of this improvement is \$1,000, making a total for extension of refrigerating facilities of \$4,000. An appropriation for this purpose is particularly urged.

3. ENLARGEMENT OF ASSEMBLY HALL. No institution for the insane, in the judgment of the writer, possesses an assembly hall having more admirable points than that at Longcliff, but it is not big enough for the present population. The brightest hours in the rather monotonous life of the large majority of the inmates are those which are spent within its walls. This opportunity is afforded in the enjoyment of the weekly dances and frequent entertainments—dramatic, musical, etc.—which it is the constant endeavor of the management to provide for them and which certainly go far to raze out the written troubles of the brain, for the hour at least. With the growth of the hospital population in the course of years the number that can properly enjoy these occasions has increased to such an extent that many are barred out on account of lack of room. This should not be. It is practicable to add approximately three hundred seats to the capacity, now four hundred, of the auditorium, by building a bay on each side extending from gallery to the stage, the full height of the auditorium, without seriously interfering with the use of the building for its present purposes, and without destroying any of the special points of the building as it stands, and, moreover, without marring any of its agreeable architectural features. The estimated cost of this improvement is \$5,000, and an appropriation therefor is recommended.

4. LABORATORY. In a hospital containing a population of more than a thousand people, in the present day a pathological laboratory in which chemical, physical, microscopical and bacteriological work can be done, is a necessity. In this institution during

the past years laboratory work has gone on perforce, but the laboratory has been without a local habitation or even a name, because no place for it was originally provided and none fitting has ever been found. At one time it was in the Superintendent's private office; at present its lowly habitation is in the cellar. The provision of a separate and fit home for these purposes, modest in its designs, dimensions and equipment, is earnestly recommended. It is estimated that such provision can be made at a cost of \$6,000 sufficient for all necessary purposes.

5. **ROOT HOUSE.** The wooden building used since the opening of the hospital in 1888, for the storage of potatoes and other winter vegetables and fruit, is in a state of extreme dilapidation notwithstanding constant repair, and will not serve its purpose more than during the current winter. An appropriation of \$2,500 is recommended for a permanent one of stone and brick.

6. **FLOOR REPAIRS, ENTRANCE HALL ADMINISTRATION.** In the entrance hall of the Northern Hospital for Insane the first thing which greets the eye of the visitor is a warped, open-jointed and otherwise unsightly wooden floor. This condition is due to original defect in construction and can not be repaired. The dignity of the State demands that it should be lowered four inches and covered to this depth with a substantial floor of concrete, faced with tile in pleasing and proper design. This indispensable improvement will cost about \$1,000.

7. **ALTERATIONS, FIFTH AND E WARDS.** These two wards are the largest in the hospital. Each contains over one hundred patients. The upper stories are light and airy, the lower are relatively dark and close, and in dark weather, somewhat dreary on account of the brick loggie or verandas which bound the dayrooms on the side and which interfere very considerably with direct transmission of the sun's rays into the room. This is particularly so on the north side. To remedy this condition as far as possible it is proposed to subdivide the dayrooms of these two buildings longitudinally through the center and make such other alterations as are required to subdivide each of these ward buildings into two wards, one on the upper floor and one on the lower, with the dormitories on the north side and dayrooms on the side. It has been found, moreover, that an aggregation of a hundred people in a single ward organization is undesirable on many accounts relating

to both general and individual management. Two thousand dollars will be required for this purpose and the appropriation of this sum is respectfully urged.

GENERAL CURRENT NEEDS.

GENERAL MAINTENANCE. For the first time in the history of this hospital for the last biennial period the appropriations for maintenance, clothing and repairs have all been ample for existing needs. Like sums will probably be sufficient for the biennial period beginning November 1, 1907. With a proportionate increase for increase of population and the number of buildings to be kept in repair, the following sums are definitely recommended:

For maintenance, \$135,000, with \$160 per capita per annum for any excess over 848 inmates, this number being the daily average for last fiscal year.

For clothing, \$6,500.

For repairs, \$8,000.

RECAPITULATION OF NEEDS.

REGULAR.

Maintenance	\$135,000 00
Clothing	6,500 00
Repairs	8,000 00

SPECIFIC.

General water purification.....	\$4,500 00
Extension of refrigerating system.....	4,000 00
Enlargement of Assembly Hall.....	5,000 00
Laboratory	6,000 00
Root house	2,500 00
Floor repairs, administration halls.....	1,000 00
Alterations, Fifth and E wards.....	2,000 00

CAPACITY.

The buildings of the Northern Hospital for Insane provide accommodation for 820 inmates. The tent accommodates 30 more. This, although in constant use for three years and a half, is still a comfortable and popular residence. The new houses now being built will take care of at least 150 inmates. There are now twenty applications for admission on file in a state of suspension for lack of room in the department for men. For women there is

ample room to meet all present requirements. These conditions have existed for many months past. In my last biennial report this situation was reversed. There was plenty of room for men and none for women; that is to say, all applications were obliged to await vacancies. It is expected to open the new buildings early next year, and thereafter it is reasonable to hope that requirements will be met for at least three or four years. In this connection I desire respectfully to reassert the opinion set forth in my last biennial report to your honorable body, namely, that this institution has reached its natural and proper limit as to capacity and should not at any time in the future be made any larger. The apparent need for increase in size, in my judgment, can be better met by legislation limiting the admission of very aged who are simply feeble-minded from senility and who require only troublesome care on account of the helplessness so often incidental to extreme old age, of epileptics other than those who are positively dangerous to the community in which they live, and of such as have no legal settlement in the State, as indicated by the very excellent statute thereto relating. Abuse of privilege in these several directions is of common occurrence, and nothing short of strict legal regulation can put an end to it. As the law stands regarding committal at present the medical superintendent is not empowered to take such action in these cases as would render justice to the State and to such of its unfortunate citizens as actually need state care, but who are barred out of its institutions because the places which they should occupy are filled by the less meritorious sorts above named.

OCCUPATION AND AMUSEMENT. The value of activity of both mind and body where, in any way practicable, as a means of cure, or at least palliation, continues to be recognized, and efforts have been constantly made to enlist the interests of officers and attendants as well as patients in a full and varying program of occupation and amusements. The responsive co-operation has been satisfactory, and many of all grades have exercised their ingenuity and personal skill with an enthusiasm which has been most gratifying. Naturally, the field of possibilities has close limits, but nevertheless a series of regular and irregular amusements have been devised and executed, which, it is hoped, have gone far to break the monotony of institution life. A system of traveling libraries has been expanded so as to reach now all excepting four

wards. A neat case containing 100 volumes of books, mainly recent, is now placed on each ward, directly within reach of the patients, so that now the reading of good books is much more prevalent than in the days when books were selected from the central library. In this connection I desire to thank the Logansport Dramatic Club for an excellent presentation of the spirited drama, "The Gilded Fool," the Elks band and the Independent band, of Logansport, for several very delightful moonlight concerts; the Crystal Theater, of Logansport, for a greatly enjoyed vaudeville matinee; the High School Mandolin Club for a very elaborate and pleasing concert directed by Miss McNitt, the Misses Howe and friends and Mrs. Shultz for two very agreeable concerts, and, particularly, the amateurs of Longcliff for two very much enjoyed plays. Besides the above, the following entertainments were paid for by the Christmas donation fund: The Tennessee Warblers, Hagenback's Animal Show (134 attending), the Merrill Concert Company (twice), a moving picture show (twice), an elocutionist, a ventriloquist, Wallace circus (302 attending), Dowling's vaudeville—all of which were fully appreciated. Thanks are especially due for gratuitous copies, regularly sent, of a few of the northern Indiana weekly newspapers.

In conclusion I desire to express my appreciation of the loyal co-operation of officers and employes and of the considerate encouragement of your honorable Board.

Respectfully,

J. G. ROGERS,
Medical Superintendent.

Longcliff, November 21, 1906.

ANNUAL REPORT
OF THE
STATE VETERINARIAN

OCTOBER 31, 1906

TO THE GOVERNOR

INDIANAPOLIS:
WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING
1906

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
INDIANAPOLIS, November 22, 1906. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 15, 1906. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

FRED L. GEMMER,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana,
December 15 1906

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer December 15, 1906.

HARRY SLOUGH,
Clerk Printing Bureau.

ANNUAL REPORT

OF THE

STATE VETERINARIAN.

Governor J. FRANK HANLY, *Indianapolis, Indiana.*

Sir: I herewith submit the following as the report of the office of State Veterinarian for the year ending October 31, 1906.

The work in the office of State Veterinarian has taken its usual course in both lines, that of police duty in infectious diseases and that of research work. There has been an increase in the amount of police work, due to the increase in the number of cases of glanders and in cases suspected of being glanders. One-half of the total number of cases of glanders reported were in railway contractors' camps or among horses previously used in such work. There has not been an increase of the disease among what might be termed "resident horses." There has been a marked increase in the number of cases reported in adjoining States, and we may therefore expect some increase of the trouble in the near future. All cases showing positive evidence of the disease have been destroyed promptly, and those known to be exposed have been tested with mallein or placed in quarantine. Horses and mules were condemned in the following places: Indianapolis, 7; Utica, 2; Franklin, 3; Greenwood, 2; Noblesville, 1; Straughn, 3; Anderson, 5; Cuzco, 12; a total of 35. Twelve other animals were killed as being affected with the same disease without the formality of condemnation.

The number of cases of sheep scab has been reduced until there is only a trace left of what a few years ago was a serious nuisance. Only two large flocks and six small ones were reported as affected. The good results along this line have been accomplished by co-operation with the United States Bureau of Animal Industry. A similar line of action is proposed with reference to scabies in horses and cattle.

A new infectious disease made its appearance within the State during the past year. It is known as infectious ano-vulvitis. The only herd of cattle affected was in the vicinity of Williamsport.

There is a gradual increase in the number of cases of rabies, and the only way in which this may be checked is by imposing such restrictions upon the ownership and control of dogs that there will be a much-needed reduction in the worthless dog population.

There has been the usual number of outbreaks of the common contagious and infectious diseases, some of which were given attention and

others not, depending upon whether the trouble was one in which State control would have the desired effect or not.

There has been an increase in the number of applications for tuberculin testing in private herds. The information desired has been for private benefit and not for the public. The owners have been referred to their local veterinarian. Some desire the certificate from the State because of the effect it will have in their business of selling breeding stock or in establishing a dairy trade. Authority should be given to fix a fee for such certificates. Authority is also needed for establishing a fee for the inspection and certification of stock intended for shipment out of the State when such is desired by the owner.

Whenever visits have been made to cities or towns in the State, and time permitted, a personal inspection has been made of the slaughter-houses to learn of their sanitary condition and the cleanliness with which slaughtering is done. The condition in some places is a disgrace. The conditions described in the large packing establishments as being unsanitary, uncleanly, and prejudicial to the production of a wholesome food product, resulting in federal legislation upon meat and slaughter-house inspection, are not worse, and in some cases not as bad as are to be found in some of the small places within the State. If federal legislation be necessary to protect the consumers of meat which passes through interstate trade, a similar line of legislation is needed for the protection of those who consume the output from the local butcher.

This office, in co-operation with the Purdue Experiment Station, published a special bulletin on the "Characteristics of Some of the Contagious and Infectious Diseases." This represents the work completed last year, and is the fourth of the series which have been issued in this manner. These bulletins reach about 15,000 homes, and serve a much greater number of persons than does the police control of diseases. I consider them to be the more valuable part of the State work. The cost of publication to the station has been approximately \$1,500 for each bulletin. This includes the extra labor, printing, mailing, etc. The franking privilege thus gained has saved about \$400 additional. The office of State Veterinarian has been the gainer by being able to accomplish what it has desired without the expense of an elaborate annual report. The station has been the gainer in that it is the least expensive bulletin which it issues and covers a field not already overcrowded. There is data at hand which can easily be put in form for another popular bulletin, also data for a technical bulletin which would have a special value to veterinarians.

The recommendations which I have to offer as additions to the present law are:

1. That the State Veterinarian be authorized to fix fees for testing or examining stock which require or need an official certificate. Such certificates have a value to the owner and not to the general public.

2. The fixing of a seal. This is needed in the issuance of certificates where animals are to be shipped to other States and countries for certain purposes.

3. That the powers of the State Veterinarian be enlarged by act to accept the rules and regulations of the United States Bureau of Animal

Industry relating to meat and slaughter-house inspection, and to enforce such parts as may be practical in all the slaughter-houses in the State.

This work properly belongs to this office. It can be made expensive, or it can be made effective and be accomplished at little cost.

Respectfully submitted,

A. W. BITTING, State Veterinarian.

November 20, 1906.

SEVENTEENTH ANNUAL REPORT OF THE
BOARD OF STATE CHARITIES OF INDIANA

NOVEMBER 1, 1905, TO OCTOBER 31, 1906

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
December 13, 1906. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 15, 1906. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

FRED L. GEMMER,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 17, 1906.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer December 17, 1906.

HARRY SLOUGH,
Clerk Printing Bureau.

STANDING COMMITTEES OF THE BOARD FOR THE YEAR ENDING OCTOBER 31, 1907.

On Penal and Reformatory Institutions.—Demarchus C. Brown, Sarah Stockton, Timothy Nicholson.

On Hospitals for Insane.—Timothy Nicholson, Sydney B. Davis, William P. Cooper, Carrie Goodwin Rexford.

On Institutions for Defectives, Soldiers' Home and Soldiers' and Sailors' Orphans Home.—Sydney B. Davis, William P. Cooper, Sarah Stockton.

On County Institutions.—William P. Cooper, Timothy Nicholson, Carrie Goodwin Rexford.

On Statistics and Publications.—Demarchus C. Brown, Sarah Stockton.

On Auditing.—Demarchus C. Brown, Carrie Goodwin Rexford.

On Children.—Sydney B. Davis, Sarah Stockton.

INDIANAPOLIS, IND., December 13, 1906.

HON. J. FRANK HANLY, *Governor of Indiana*:

Dear Sir—In compliance with law, the Board of State Charities has the honor to submit herewith its seventeenth annual report, being for the year ending October 31, 1906.

Respectfully,

TIMOTHY NICHOLSON,
WILLIAM P. COOPER,
SYDNEY B. DAVIS,
SARAH STOCKTON,
CARRIE GOODWIN REXFORD,
DEMARCHUS C. BROWN,

The Board of State Charities.

AMOS W. BUTLER, Secretary.

GENERAL REPORT OF THE BOARD.

The membership of the Board of State Charities remains the same as a year ago. The Governor reappointed Demarchus C. Brown and Mrs. Carrie Goodwin Rexford at the expiration of their respective terms. The members of the Board and of the standing committees for the current year are given on a preceding page of this publication.

It is a pleasure to speak of the great interest Governor Hanly has taken in the charities of the State. He is in harmony with the best ideas of institution management. He believes in the best recognized methods of care, education and treatment of the State's wards; in the conduct of the institutions on the merit system, and in maintaining them upon the nonpartisan basis. With his encouragement and support the institutions of Indiana, which have in recent years attained a favorable position among those of our sister States, are making further advancement. The State is performing its duty more fully than ever before toward its unfortunate citizens.

Sometimes inquiry is made as to what the Board of State Charities is. This Board is an official, unpaid, nonpartisan body, created by statute and appointed by the Governor, for the purpose of supervising the whole system of public charities in this State. The Governor is ex officio a member and its president. The appointive members of the Board are four men and two women. Timothy Nicholson has served continuously as a member of the Board from its creation in 1889. The Board elects a secretary, who is paid a salary. He is an expert in the subject of public charities and in the organization and administration of institutions, and is able to give the benefit of his judgment and the help of his advice for the improvement of conditions and the advance of the charities of our State.

The Board has under its supervision all of the State charitable and correctional institutions, also those belonging to the

counties and cities, those receiving any aid from public funds and all children's institutions. It has to assist the Boards of Children's Guardians, the Boards of County Charities, the Juvenile Courts and many private charities. It includes the supervision of the official poor relief of the State as administered by the township trustees, and has to compile their reports, also reports from county auditors, county clerks, county jails and the workhouse, poor asylums and orphans' homes. It also receives, tabulates and preserves copies of the statistical and financial reports of the various State institutions, and maintains a registration of their inmates. In addition, it visits the State institutions by its members or its secretary at least quarterly, and all of the county institutions, such as jails, poor asylums and orphans' homes, as frequently as possible. It visits various other public and semi-public institutions, such as hospitals, old people's homes and private orphanages, whenever it can. It conducts investigations into the management of most of these institutions, and is prompt to make inquiry into any complaints that are made of institution management, from whatever source they may come.

In enacting the law providing for the Board of State Charities, Indiana took a great step forward in scientific as well as economic lines. Its members have given time and earnest effort to its work. The results have been notable in the improvement of the whole system of public charities and in the collection and dissemination of information of value to the whole world. It was a great step in public charities from the regrettable position of the late eighties to that she now occupies among the foremost of States. Such progress can be made only by an intelligent study of the subject and the consequent advice and encouragement of such a board.

The improvements that have been wrought in the past seventeen years have been notable. Supervision has succeeded lack of oversight. Investigations are promptly made. Comparisons of institutions are made upon a common basis. Information regarding fiscal affairs is printed quarterly. The result of these steps is a movement toward higher things. The standard has been raised. The wards receive better care. The merit system has been introduced. Non-partisan boards of trustees exist by law in every State institution but one, and in that one by appointment. Business management in public charities has been encouraged, and year

after year there has been improvement. The insane are better treated. The care and training of the feeble-minded has improved. The schools for the deaf and blind have advanced. In the progress of prison reform we have turned away from that dark day when vindictive punishment dominated everything to the more hopeful and encouraging reformatory and indeterminate sentence laws, the practical expression of the great reformatory principle of our State constitution.

With each year there comes added work to this Board and increased opportunities for useful service. The growth of our public charities, the establishment of new institutions and the extension of others, the increasing number of unfortunates for whom care is provided, the expanding oversight of the State over the dependent children in the past seventeen years, give cause for congratulation to the State on what has been done, and are reason for encouragement to go forward, in the hope that there are yet other steps of progress to be taken.

An idea of the extent of the work of this Board may be comprehended from the following tabulated statement:

Enrolled in State institutions.....	10,416
Present in county poor asylums.....	3,124
Present in orphans' homes.....	1,747
Present in county jails.....	1,062
Estimated population of town and city lockups.....	100
Aided by township trustees.....	45,331
Brought into school by truant officers.....	23,279
Total	85,059

Another aspect of the work is presented by the expense incurred by the various agencies just noted:

State institutions—

Maintenance	\$1,620,454 48
New buildings and permanent improve- ments	294,838 47
	\$1,915,292 95

County poor asylums—

Maintenance	\$406,141 23
New buildings and permanent improve- ments	76,969 30
	\$483,110 53

Criminals and jail expenses—

(State Statistician's report).....	206,797 89
------------------------------------	------------

Dependent children—

Orphans' home:

Maintenance \$191,488 02

New buildings and permanent improve-
ments 1,000 00

\$192,488 02

Agency of Board of State Charities..... 8,000 00

\$200,488 02Compulsory education (salaries of truant
officers) 31,878 10

Outdoor poor relief 249,884 68

Total \$3,087,452 17

The Board has held its usual stated meetings during the year, also special and committee meetings. It has, by committees, visited the various State institutions under its supervision and some of the local institutions. The Secretary has made more frequent visits and made reports thereof to the Board. Only one formal investigation has been made the past year. This was of the Industrial School for Girls and Woman's Prison on December 4-8, 1905. A copy of the testimony taken is on file in our office. Another copy, with the conclusions of the Board, was filed with Governor Hanly. The charges and conclusions were as follows:

INVESTIGATION OF CHARGES AGAINST MISS EMILY E.
RHOADES, SUPERINTENDENT INDUSTRIAL SCHOOL
FOR GIRLS AND WOMAN'S PRISON.

At the regular meeting of the Board of State Charities on November 20, 1905, Governor J. Frank Hanly presented the accompanying charges and affidavits of Eva M. Hall and Josephine Stafford, and also the affidavit of Jennie Bowers, against Miss Emily E. Rhoades, Superintendent of the Industrial School for Girls and Woman's Prison, together with a written request from Superintendent Emily E. Rhoades and from the Board of Managers of the Industrial School for Girls and Woman's Prison that the Board of State Charities be asked to make proper investigation. The Governor also made a similar request. In accordance therewith the following motion was adopted:

Moved, That the charges against Miss Emily E. Rhoades be investigated by this Board; that the investigation be public, beginning Monday,

December 4, at 10 a. m., at the institution; that Superintendent Emily E. Rhoades, and the persons making charges be notified thereof, that they may be present; also that said superintendent, Emily E. Rhoades, and said persons making charges against her be notified to supply the secretary of the Board with the names and addresses of witnesses and the particular points of the charges to which each will testify, within five days from this date; that the secretary be instructed to send subpoenas for all witnesses whose names were furnished by these parties.

A copy of this resolution was sent to each of the affiants, with the request that each supply the names of witnesses. To this request no response was received. Finally a representative of our Board went to see each one personally, to ascertain the names of such witnesses as she might have to give. Only a few names were supplied. The Indianapolis Sentinel, however, supplied the names of a large number of witnesses, and Miss Rhoades also supplied a long list of witnesses. Some of these lived without the State. With few exceptions those within the State were subpoenaed, unless they were at the institution. Those without the State were invited to come, the Board offering to pay their expenses, but, except a few, they declined.

The persons making affidavits were told that each would be permitted to have an attorney present, to sit by and advise her, but not to ask any questions or take part in the investigation. Superintendent Emily E. Rhoades was given similar notice.

The Board met at the institution Monday, December 4, to begin the examination. Those present were Governor J. Frank Hanly, Timothy Nicholson, Sydney B. Davis, Demarchus C. Brown, William P. Cooper, Dr. Sarah Stockton and Mrs. Carrie Goodwin Rexford, and Secretary Amos W. Butler. Governor Hanly, as president, called the meeting to order. Judge Davis was chosen to conduct the examination.

Altogether ninety-seven witnesses were called and examined. Some at their own request and others on motion of the Board were recalled. During the investigation members of the Board visited different parts of the institution mentioned by the witnesses, including "Japan," No. 10, the bath rooms and single rooms. "China" was removed more than a year ago. The testimony taken follows herewith. As each inmate or officer testified, he or she was urged by the Governor, with the approval of the members of this Board, to tell the whole truth without fear of results, and was

assured that the Governor and the Board would undertake to protect the rights of the witness and no harm should come to him or her because of stating the truth to the Board.

The examination was held during five days, three sessions being held some days. The meeting adjourned Friday, near midnight.

FINDING.

After carefully considering the evidence submitted, the Board of State Charities has made the following finding on each charge:

Charge 1. "That the said Superintendent Emily E. Rhoades has been guilty of the most revolting cruelty toward inmates at divers and various times in these matters," to wit:

"a" "That she has brutally beaten inmates of the Industrial School without cause and for insignificant infractions of rules of the institution."

"d" "That she has often brutally kicked, struck over the head with keys and knocked down girls who, through some minor infraction of discipline, incurred her wrath."

Not sustained. We find that punishments in a few cases have been severe, but not unduly so. They were due to conditions and necessities; the disorganized condition of the school at first, insubordination and carrying weapons, resulting in a riot; and to the inexperience of the superintendent in this peculiarly hard and difficult work. But these conditions do not now exist. Severe punishments have not been needed nor inflicted for a year past.

"b" "That she has violated the law by incarcerating girls committed to the Industrial School in cells on the Woman's Prison side of the institution."

Not sustained. We find that the only punishment cells now are situated between the prison and the school, and can be shut off from the prison. These are called "Japan," and are entirely above ground. No girls were confined in these cells at the time prisoners were there. Because of the crowded condition of the institution there was no other place. For years the third floor over the prison has been occupied for dormitories for the girls. Communication between them and the prisoners is cut off as effectually as is possible.

"c" "That she has handcuffed and shackled children until they were helpless, then imprisoned them in dark, loathsome and unsanitary cells and left them there for days at a time without any food except bread and water."

Not sustained. We find that no girls under sixteen have been shut up in cells for punishment. These cells are not loathsome nor unsanitary. Except on a very few occasions, and they some time ago, the girls received the same

food as the other inmates except coffee; then they were given bread and water, but not for an undue length of time. The exceptions were necessary because the inmates had been in a revolt and needed severe punishment.

"e" "That she has compelled little children suffering from disease to sleep in wet bath rooms as a punishment."

Not sustained. We find that there are two bath rooms referred to in the evidence, one on the first floor, the other in the basement. There is a hall with a window leading to the first. Girls have been put in there for punishment, for repeated disorder in the dormitories. There is no testimony to show that the floors were ever wet with two exceptions, and in these the bedding was not wet. They slept in the hall; they were provided with bedding. Two colored girls, because their room was overcrowded, slept in the latter for a short time. Another girl who has an offensive habit slept there for a time, as a matter of convenience. None of these were little children, and all had mattresses and bedding.

Charge 2. "That the said Superintendent Emily E. Rhoades is illiterate and incompetent from an educational standpoint to manage the affairs of such an institution as that of which she is now the head."

Not sustained.

Charge 3. "That the said Emily E. Rhoades is incompetent to be in charge of the said institution in this, to wit: That she has had no conception of the difference in disposition in different children; that she has exercised no individuality in the teaching and training of the children, and she has operated the affairs of the institution by iron-clad rule from which there was never any variation."

Not sustained.

Charge 4. "That in the training of girls in useful arts, the said Emily E. Rhoades fails to teach them self-reliance and that there is not a sufficient variety in the work undertaken."

Not sustained.

Charge 5. "That the said Superintendent Emily E. Rhoades is surly, intolerant and discourteous to officers and inmates, as well as visitors to the institution."

Not sustained. We find that Miss Rhoades on a few occasions has corrected an officer in the presence of others.

This we believe to be a mistake.

Charge 6. "That the said Emily E. Rhoades is vindictive, untruthful and unsympathetic in her dealings with the officers and inmates of the institution."

Not sustained.

Charge 7. "That she has a violent temper over which she maintains no control, but allows it to break out on the slightest provocation."

Not sustained.

- Charge 8. "That the food furnished by the said Superintendent Emily E. Rhoades to the inmates is insufficient for the needs of the growing girls of the institution.

Not sustained.

- Charge 9. "That the said Emily E. Rhoades has fed spoiled and rotten food to the inmates of the school."

Not sustained.

- Charge 10. "That the said Superintendent Emily E. Rhoades has exercised no proper supervision over the girls who are out of the school on parole, but permits them to live in dens of vice and places of infamy."

Not sustained. We find that a State Agent has not at all times been provided, but the Superintendent has made use as best she could of some of the officers of the institution in the work of supervision.

- Charge 11. "That the said Emily E. Rhoades has by her mismanagement caused the deterioration of the school."

Not sustained. We find on the contrary the school is far better than it ever was before.

- Charge 12. "That the said Superintendent Emily E. Rhoades is generally unfitted for the management and instruction of children, for the reason that she has no motherly instincts and does not understand the nature of children."

Not sustained. We find that Miss Rhoades has endeared herself to a number of girls, both those in school and those who have gone out, and there is really a strong attachment between the girls and her.

- Charge 13. "That the said Superintendent Emily E. Rhoades is unduly under the pernicious influence of one Margaret Dorwin, now the assistant superintendent of the institution."

Not sustained.

- Charge 14. "That there is a lack of co-operation between the officials of the institution and the said Emily E. Rhoades which results in there being no work properly nor satisfactorily done in behalf of the institution."

Not sustained.

- Charge 15. "That the said Superintendent Emily E. Rhoades conducts the said institution wholly as a place of punishment, instead of a place of reform."

Not sustained. The evidence shows that the institution is conducted as a place of reform and that seventy-six per cent. of the girls who go out from it do satisfactorily.

- Charge 16. "That the said Superintendent, the said Emily E. Rhoades, is wholly incompetent from either an educational, business, managerial, teaching or training standpoint to have charge of the large number of girls who are now under her complete control."

Not sustained.

- Charge 17. "That the said Superintendent Emily E. Rhoades is untruthful."

Not sustained.

We further find that the prosecuting witnesses themselves testified that they knew nothing of some of the charges to which they had sworn.

We further find that these charges were founded in malice and a desire to discredit the management of the institution.

From its beginning the Girls' School and the Woman's Prison have been under one roof. This has been a reproach to the State all these years. We are thankful that with the completion of the new buildings without the city, this unfortunate condition will come to an end. But as things are and have been in the past, the institution has been one of the most difficult to manage and the results have not been what they might have been under better circumstances. The past two or three years this has been accentuated by reason of the already overcrowded conditions growing worse. The normal capacity is about 160. The population last year was the largest in the history of the school, the average daily number present being 214. For some time past it has been 240.

When Miss Rhoades took charge of this institution it was in a turbulent condition. It had passed through two investigations. The Superintendent, a faithful and useful officer, had resigned some time before. The institution had been in the care of under-officers. There was insubordination among the girls, disloyalty among the officers and lack of harmony in the Board. Miss Rhoades, though wholly inexperienced, was induced to take up the work. She found the girls lacking discipline, resenting efforts to control them, and finally culminating in open outbreak by the girls. This was with difficulty subdued by the help of the men, and necessitated severe punishment. This was the most severe punishment used. The men have been called less frequently since, in fact not at all for nearly two years. The punishments have decreased in frequency and severity since that time. For the past year there have been very few punishments. The officers are almost all loyal, the Board is united, and there is satisfactory co-operation between it and the Superintendent. Miss Rhoades has had to learn the work and to reorganize and conduct the institution at the same time, a difficult task for one with institution experience. That she has made mistakes is true—all of us make them. Notwithstanding that, she has made good progress. The institution

never was in as good condition or doing as good work with as small an amount of punishment as now.

Respectfully submitted,

TIMOTHY NICHOLSON,
SYDNEY B. DAVIS,
WILLIAM P. COOPER,
SARAH STOCKTON,
CARRIE GOODWIN REXFORD,
DEMARCHUS C. BROWN,

Board of State Charities.

AMOS W. BUTLER, Secretary.

Indianapolis, Ind., Feb. 6, 1906.

Several inquiries were also made following reports received regarding bad conditions stated to exist in one or another of the institutions. Generally these were without foundation, but in some cases the reports were true. Usually when attention was called thereto, the proper authorities were glad to correct them; in some instances, however, this has not been done. The Board deems it better to state frankly to those in authority any undesirable conditions that may be learned, and encourage them to make the needed improvements. This is generally appreciated by the institution officials, but sometimes it is not, and then it becomes necessary to report the facts formally to the Governor or bring them to the attention of the public, so that there may be no misunderstanding, and that it may be known that this Board has been faithful in the discharge of its duty.

That which attracts the attention of the public most is the work of the commonwealth in its great State institutions. These care for thousands of persons each year. Yet is there anything of which the public is more ignorant than it is of its State institutions? These are doing a good work. They have made progress year by year. Taken altogether, they are creditable to the State. Some of them are full to the limit of their capacity. Others are overcrowded. The State has generally made provision for additional institutions. In doing all this she is only doing her duty. We must recognize that it is imperative to care for all of these unfortunates. We must do more for them than we have ever done. The State has never been able properly to care for all of the insane

or feeble-minded who are rightfully her wards. She will not be able to do so even when the institutions planned are finished. We must realize that we are a great and growing State and that we must provide accommodations in advance and have them ready for a certain proportion of our population. Not only this, but if we would accomplish the good that we should, we must have more than capacity enough in these institutions to care for these citizens, so there will be room whenever it is needed. It is well known that the chance for recovery in the first few weeks in a curable case of insanity is many times greater than it is after a few months, when that case is becoming chronic. Who can tell how many citizens have had the time of possible cure pass while they were confined in some jail or lock-up or other place of detention, without proper care, without skilled treatment, because the State had not done its duty?

It is not enough for the State to care simply for those who come into its hands as public charges. If it pursues such a policy, there will be an ever-continuing increase in the number of those for whom it must provide. If it will deal wisely with this question, it will study the conditions and seek to learn the causes that contribute to public dependency. Having carefully done this, it is certainly the duty of the State to encourage, in every way it can, the spread of such information and the instruction of the people in these great facts, to the end that they may be applied by every kind of organization that exists for the betterment of mankind in every community in the State. Such efforts at prevention, we are encouraged to believe from the preventive measures that have already been undertaken in the State, will yield many times greater returns than could be imagined by those who have not given the subject thought.

Indiana should take her place with the other States in the forefront of the movement for advanced methods in the treatment of the insane. The use of psychopathic hospitals is now past the experimental stage. Provision should be made for the care of patients in the incipient stages of insanity, even without formal commitment, where they could have the most skilled treatment. The greatest possible amount of outdoor life for patients, their employment as a means of treatment, of diverting their attention and occupying their minds, and the industrial re-education of the

chronic insane, all are worthy our attention and careful consideration.

For the past seventeen years the number of persons enrolled in the State institutions has increased at the rate of about 300 annually. The bulk of this increase is found in the benevolent rather than in the penal and correctional institutions. At the present time the enrollment of the institutions numbers 10,416, and of these there were 9,785 present on the last day of the fiscal year. The average attendance for the year was 9,604.98, or 173.06 greater than for the preceding year. The cost of maintaining this great number of people in the year 1906 amounted to \$1,620,454.48, an average of \$168.71 per capita. An additional sum, aggregating \$294,838.47 was spent for new buildings, permanent improvements, etcetera, making the total expense to the State \$1,915,292.95.

The repairs at most of the State institutions under the supervision of this Board have been kept up, and some of the new buildings provided for by the last Legislature have been completed or are in process of construction. The overcrowded condition of some hampers the administration in its free operation. There has been notable freedom from sickness, which indicates better sanitary conditions and good medical care. There is a gradual working towards a general uniform system of bookkeeping and accounting.

The reports made to the Board of State Charities show that persons are from time to time sentenced to the wrong institutions in this State.

In one and another of the State institutions inmates are to be found whose true condition has not been understood, or the situation appreciated at the time of commitment, and the institutions to which they were sent were not those in which they could receive the treatment they especially needed. Feeble-minded children are sometimes sent to the Industrial School for Girls or the Indiana Boys' School for offenses for which they should not have been held responsible. The hospitals for the insane occasionally receive patients who are found not to be insane and are promptly discharged. Sometimes these are idiotic or feeble-minded, while now and then an aged person whose care has become a trouble to his relatives and whose mental condition is due to senility, is received.

That which has attracted most attention and has perhaps caused most difficulty is the sentencing of insane persons to the State Prison. There are from 60 to 70 insane men confined at the Michigan City institution at the present time. Some of these became mentally unbalanced after their admission to the prison, but a large proportion were insane when received, and in some cases it is known that they were sentenced to prison because the counties desired to relieve themselves of troublesome cases. Some insane women have been committed to the custodial department of the School for Feeble-Minded Youth. When the facts became known they were returned to the counties from which they came. These are conditions which should be remedied. An understanding of the proper purpose of the different institutions would be of assistance in some cases; legislation will be required in others.

Several new institutions were provided for by the Legislature of 1905. Plans for the new cottages of the Institution for the Deaf and Dumb have been adopted and work has begun. The buildings are to be two stories in height, with basement. The plans originally submitted to the Board of State Charities, for criticism and suggestion, provided for three stories and basement, but on our advice they were redrawn to provide for two stories. The institution is located on an eighty-acre tract of land, north of the city of Indianapolis.

A tract of 1,228 acres near the city of New Castle, Henry County, was chosen for the location of the new Village for Epileptics. The price paid was \$122,820. A number of sites were visited, but none offered was ideal. While the best for the purpose was not selected, the one chosen was not by any means the worst. It is much more expensive land than was necessary. The commission to purchase the land having completed its work, a board of trustees for the institution was appointed, consisting of Enoch G. Hogate of Bloomington, Silas W. Hale of Geneva, and Charles L. Henry of Indianapolis. They have gone intelligently about their work. They have visited other institutions and studied them. It was wisely decided to make a beginning with the small amount left from the appropriation for the purchase of the land. Plans have been prepared, the contract awarded, and buildings are now under construction for the accommodation of fifty persons. This institution is different from any other in the State. From the very

nature of the case, it cannot be planned from the beginning and built all at once. The wise thing will be to let it be a natural growth, so that a few patients can be received each year, that they may become adjusted to the institution and their surroundings, may be properly classified and trained and educated for the best service and for their greatest happiness.

Plans have been prepared and the contract awarded for the construction of the new Southeastern Hospital for the Insane, to be located at Madison. In the main the plans are excellent, and an institution built according to them, upon such a site, should be a model.

Seven cottages, the schoolhouse and the power plant of the new Industrial School for Girls, located northwest of Indianapolis, are almost completed. While there are some things that we should have changed in the buildings, on the whole the Commission is to be congratulated upon the result of its efforts, for, taken altogether, there is probably no set of cottages for an institution of this kind that has so many desirable features.

The Commission authorized by the Legislature of 1905 to inquire into the need for the establishment by the State of a hospital for persons afflicted with tuberculosis has done good work. In its endeavor to learn all it can regarding what has been done, it has visited a number of such institutions in this country. It is to be hoped that its recommendations will look to Indiana beginning the treatment of acute cases of tuberculosis.

The State should make further provision for the care of feeble-minded women. The present facilities consist of one cottage with a capacity of 130, at the School for Feeble-Minded Youth at Fort Wayne. This cottage is now crowded, and there are many other women needing its protection. The urgency of this need does not appeal to any one so much as to those who visit our county poor asylums. There are 153 feeble-minded women in the asylums at the present time whose age entitles them to the State's care under the law of 1901 (Chap. 96, Acts of 1901).

Many of the women in the county institutions are useful to the management by reason of the work they are able to do. Where the poor asylum is so arranged as to provide complete sex separation, and the matron and superintendent are supplied with the help necessary to secure proper supervision, they are probably as

well off as in a State institution. In how many of the poor asylums do these conditions exist? There are records in the office of the Board of State Charities which show that little protection has been afforded in some, and we know that the danger exists in all.

An especially sad case is reported from an asylum in northeastern Indiana. Two sisters, both feeble-minded, were admitted to the institution in 1882, when they were thirteen and fifteen years of age, respectively. Under our present law children are not permitted in a county poor asylum longer than sixty days, but at the time these two girls were received no other provision was possible. According to the records, neither has left the institution at any time within the past twenty-four years, yet one of the sisters has borne one child, the other six children. In an asylum in one of the southern counties a feeble-minded woman, now thirty-four years of age, has had four children in the eight years she has been an inmate of the asylum. The last was born last year. In another asylum a feeble-minded woman, now forty-nine years of age, has been an inmate since 1879, and in that time has been the mother of seven children.

The above cases are among the worst in our records, but they can be duplicated many times among the 426 feeble-minded women now in the asylums. Of the 3,124 persons in the asylums on August 31, 912, or 29 per cent., were feeble-minded. They have to date spent a total of 9,526 years on county support, an average of a little over ten years each. Some have been in the asylums but a month or so; one woman has been an inmate for fifty-eight years. It is safe to say that each feeble-minded person now in the county poor asylums has cost the respective counties, on an average, \$1,000 for maintenance, and the majority of them will remain public charges until their death. By giving adequate care to feeble-minded women the State would cut off the most prolific source of this and other forms of degeneracy.

Poor asylum conditions in many counties are very bad. In many there is not proper provision for the separation of the sexes. From year to year, however, new asylums are being built and there is improvement in administration, so that something is being done, though it seems very slow to the casual observer. The Board has received no reports of the marriage of poor asylum inmates since the present marriage law went into effect.

The worst conditions to be found in any institutions in the State are those existing in our county jails. The whole system is bad, and save in minor ways there has been no improvement in it for fifty years. The true theory of our jails is that they should be places of detention for those who are waiting trial or are held as witnesses, and for misdemeanants. There should be one or more State workhouses for male prisoners, and the buildings soon to be vacated by the Industrial School for Girls should be remodeled and used for convicted women. Such an arrangement, when carried into effect, will be better for the State, from the standpoint of both society and economy. These persons violate the State law, and the State should have charge of them. They would thus be safely kept under the best auspices and under reformatory influences; they would be given employment, and when they went out they would at least be no worse than when they came into the prison, and in many cases would doubtless be better. This would do away with the fee system and its abuses, with the immorality and vice to be found in our jails, and in the end we believe would be a lessening of expense and would lead to a reduction in the amount of crime. The only country in the world in which crime has been reduced, according to students of the subject, is Great Britain, and this was accomplished when the prisons of that land were placed under the control of the general government. If the next Legislature could be induced to enact into law the recommendations of the Prison Reform Commission which reported to the General Assembly of 1905, it would be entitled to great credit, and in this long-neglected matter would place Indiana ahead of all the other States.

In the orphans' home work we continue to find many persons seeking to evade their natural responsibilities by placing their children in these institutions. The number of children in orphans' homes increases constantly. In a few cases, however, the population of the homes has decreased to the point, or even below, where they can be maintained on the per diem allowance, and the welfare of the children is being sacrificed to the end that the institution may be maintained. In Randolph County an effort was made to employ a superintendent and pay him in proportion to the number of children in the home. The larger the number of children, the larger the salary. Some of these orphans' homes, because they are

in financial straits, not only have to keep children who should be placed out in families, but they often fail to secure satisfactory matrons because they cannot pay adequate wages. These matrons frequently change, to the disadvantage of the home and the children.

Some of the child-saving agencies are doing splendid work in finding homes for children, as will be seen by the table farther along showing the placements. Among those that are most efficient we are pleased to note some of the Boards of Children's Guardians. Other of the local organizations, however, are not doing what they should in placing children in homes. Although there is unquestionably an increasing number of families in this State which would be glad to receive, care for, and train a homeless child, the local organizations are not taking as much interest in seeking out family homes as they formerly did, and as they should. It is as much their duty under the law to find homes for these children in families and to visit them afterwards as it is to provide them with food and clothing. It is the opinion in certain quarters that some of these associations that are lacking in activity in child-placing desire to retain the children in the Home for the financial benefit to be derived therefrom. If this is true, it is sacrificing the child's best interest for the benefit of the Home. Under such conditions the Home would cease to be for the benefit of the child, but the child would be kept for the benefit of the Home. The time is at hand when all of those who are engaged in work for dependent children should adopt the best methods; should seek by every means to place all placeable children in families, properly supervise them, and so conduct their institutions and their work as to comply with the law.

The law requires that all articles of incorporation of organizations or associations which seek to care for children shall be approved by the Board of State Charities before they can be incorporated. There have been one or two instances in which organizations filed their articles of incorporation without following the law and submitting them to the Board of State Charities. In the opinion of the Attorney-General such acts of incorporation are not valid.

Fortunately the State of Indiana has never gone astray and followed after the fashion of some other States in allowing subsidies

to private institutions. The State has never established a precedent by so doing, and it is to be hoped that it never will. There have been times when one or another cause has sought from the Legislature contributions for their special charity, but the policy of Indiana, established years ago, has been that whatever the State did it would do itself, and that it would not go into partnership with voluntary institutions or organizations. The condition in some other States, such as New York, Pennsylvania and California, in the matter of State subsidies to private charities, and the extent to which it can grow if fostered, should warn us never to take the step.

On the other hand, the law authorizes some of the counties to contract with individuals, associations or organizations for the care of dependent children. This has both its good and its bad sides. There are many counties, most of them in fact, that have not enough children that are properly public dependents to support an orphans' home. These can best be cared for in an institution which is thoroughly up-to-date in its ideas and methods. Such an institution should be active in the placement of all placeable children, and careful in the treatment and training of those who are not. On the other hand, if an institution is not thoroughly up-to-date it may retain the children for the income they bring it, which is an abuse of the system, a wrong to the taxpayers, and a lasting injustice to the children.

At the end of the year, as the reports come in, it is customary to look over them to determine whether they indicate an improvement or otherwise in local conditions. The investigations of our Board and the reports which have been framed for the use of local officers show us conclusively that the causes of dependence, degeneracy and crime for which the State is bound to care, are to be found back in county and township and town. As we give more attention to studying conditions there, to endeavoring to interpret their meaning, to attempting to apply a remedy, so we may save human lives to usefulness, and the State in the future a great bill of expense.

Where idleness abounds vice is sure to flourish, pauperism to increase, and degeneracy to beget its kind. As the people are awakened to the fact that they have some responsibility in this matter,

or the officials are aroused to the proper enforcement of the law, we see each of these things decrease or disappear.

In the matter of outdoor relief, while there has been in the past ten years a reduction of \$337,192.09 a year in expense, and of 29,865 annually in the number of persons helped, it is still much too great. There are great inequalities in its distribution. Abuses exist because of a deadened public conscience, of various local influences, or the indifference and carelessness of the officials.

For the year ending December 31, 1905, relief by township overseers of the poor amounted in value to \$249,884.68. This includes all kinds of relief—fuel, provision, clothing, transportation, medical attendance and burials; also aid to children, required by the compulsory education law to attend school. The reports indicate that 45,331 persons shared in this relief. The trustees now in office made a commendable record for promptness in sending in their 1905 reports. Within thirty days after the close of the year each of the 1,016 trustees had filed his report. In general these officials have come to understand what is desired in the way of uniform reports, but it is occasionally found necessary to instruct new officers, who do not realize their value and who do not fill out the blanks fully. An increasing number of the counties are conforming to the poor relief law. Miami and Wells are reported this year as not doing so.

The increasing development of philanthropic interest is general throughout the State. As is to be expected, new agencies have been created. Most all of these agencies are valuable, and when properly organized and with a definite purpose in mind are welcome comers into the field. Some, however, are misdirected in their effort, and some are unworthy of encouragement or financial support. Those that are weak can be stimulated; those whose efforts are in the wrong direction can be turned in the right way; those that exist without proper reason, or are in the hands of unscrupulous persons, should be suppressed.

Not only organizations from our own State, but from other States, seek to profit by the bounty of our citizens. Some of these are under investigation; others have not complied with the law of the State. Among the last named may be mentioned the American Home-Finding Association of Chicago, Ill. Reference was

made last year to the fact that this organization is outlawed in Indiana, yet it is said to be collecting funds for carrying on its work in one locality and another. An organization from Arkansas, believed to be unworthy, has sought to raise money in this State, and from time to time one learns of other outside agencies. It is well for those of our people who are charitably inclined to investigate not only the merit of the cause for which the appeal comes, but the standing of the organization making it. There are many worthy charities in our State that will be glad to receive the contributions of those benevolently inclined. These we know. Their plans and purposes are pure and true. Those in charge of them are our neighbors and friends.

The National Conference on Backward, Truant and Delinquent Children met in Philadelphia in May. This was a very interesting and helpful meeting. From 150 to 200 persons who are engaged in working in this puzzling group were in attendance. A day was spent in the House of Refuge at Glen Mills, which is a model of cottage construction. This meeting was followed by the National Conference of Charities and Correction, which also met in Philadelphia, May 9 to 16. In many respects this meeting was the largest and most notable the Conference has held. It was estimated that 3,500 persons were present at the opening session. The opening address was by ex-President Grover Cleveland, and others prominent in philanthropic work spoke. The Governors of two States, John A. Johnson, of Minnesota, and J. Frank Hanly, of Indiana, addressed the Conference. No address at the Conference was so well received as that of Governor Hanly. It was a practical document that presented the true theory of the organization of the State's charities. All of the sessions were largely attended. Even those devoted to such dry subjects as statistics had as large an attendance as was ordinarily to be found in sessions devoted to more popular themes. It was a gratification that four members of our Board, including Governor Hanly, could be present. The next Conference will meet in Minneapolis, Minn., June 12-19, 1907. Indiana was well recognized in the list of officers. The Secretary of this Board, Amos W. Butler, was chosen as President; Alexander Johnson was continued as General Secretary and was also made a member of the Executive Committee. Mr. Nicholson, a member of this Board, was placed on the Execu-

tive Committee; Mr. C. S. Grout on the Committee on Needy Families; Mrs. E. Eckhouse on the Committee on Promotion of Health in Home, School and Factory; Dr. G. F. Edenharter on the Committee on the Insane and Epileptic; Prof. D. C. Brown on the Committee on Defectives. As the place of meeting in 1907 is so near, it is hoped that Indiana will have a large number of persons in attendance.

The National Prison Association met in Albany, N. Y., September 15-20, under the presidency of Hon. C. V. Collins, Superintendent of State Prisons in New York. Much interest was taken in this meeting by the officials, both of the penal and correctional institutions and of the State of New York, and throughout the East generally. Most of the meetings were held in the Senate Chamber of the Capitol. This, with many other courtesies, including an excursion to and through Lake George, was given by the State of New York. The Sunday sessions were held in the Episcopal Cathedral, where Bishop William C. Doane, D. D., preached the Conference sermon. An interesting feature of the Congress was an exhibit made by the New York Prison Department, of the work of the reformatory and penal institutions. The program was full and well carried out. The attendance was large. The interest continued throughout; in fact the closing meeting of the Congress was one of the best held. The attendance represented nearly all the States and Territories in the Union and the Provinces of Canada. The next meeting is to be held in Chicago, in the fall of 1907. Mr. E. J. Murphy, warden of the Illinois State Penitentiary at Joliet, was chosen President, and Amos W. Butler, the Secretary of this Board, was re-elected General Secretary.

The State Conference of Charities, held at Muncie, October 6-9, was the most widely attended of any ever held. Mr. Will H. Whittaker was president. The enrollment, 578, was practically the same as at the last Indianapolis Conference, but the attendance was larger. Sixty-seven counties were represented in the registration. Most of the State institutions, as well as local institutions, were represented. The Governor, former Governor, Lieutenant-Governor, the State Factory Inspector, the President and Secretary of the State Board of Health, and officials of most of the State institutions were present. Several persons from outside the State attended. Among some of the principal speakers were:

Hon. S. L. Black, Judge of the Juvenile Court, Columbus, Ohio; Mr. H. H. Shirer, Secretary of the Ohio Board of State Charities; Mr. George L. Sehon, Superintendent of the Kentucky Children's Home Society; Mr. Ernest P. Bicknell, Superintendent of the Chicago Bureau of Charities. The State Federation of Woman's Clubs, which began its sessions at Muncie on the last day of the Conference, adjourned to attend the closing session of the Conference in a body. Greetings were received from Mrs. Alice Mum-mert, President of the State Federation, Mrs. Sarah Platt Decker, President of the National Federation, and from the State W. C. T. U., in session at Portland. The next Conference will meet at Evansville in the fall of 1907. Rev. Francis H. Gavisk, of St. John's Church (Catholic), Indianapolis, was chosen President for the coming year. "Charities and the Commons" published a full and appreciative account of our Muncie meeting.

The State Association of County Commissioners held its second annual meeting at South Bend September 26 and 27. This was a very helpful meeting. The Association meets next year in Indianapolis. The State Township Trustees' Association meets annually in Indianapolis, usually in December. Some representative of this Board is usually invited to speak, and a good opportunity is thus afforded to consider the question of pauperism.

The work of the Board of State Charities increases from year to year. The number of institutions under its supervision, the number of local boards requiring advice and assistance, and the general interest throughout the State in the whole subject of charities and correction is constantly growing, and the demands upon the Board's employes are greater than can be met. There are about three hundred institutions, State and local, which, under the Board's by-laws, should be visited by the Secretary at least annually, and two hundred others to be inspected if the Board complies with the provision of the law requiring it to "investigate the whole system of public charities and correctional institutions of the State." There are now seventy-two Boards of County Charities and thirty-nine Boards of Children's Guardians with whom the Secretary must often confer. The correspondence with these and other officials and citizens is very heavy. Frequent conferences must be held with Boards of County Commissioners regarding the management of local institutions and the erection of new buildings.

More than 7,000 reports are received annually from public institutions and officials, and all must be studied and tabulated. The Indiana Bulletin of Charities and Correction, a pamphlet averaging seventy-five pages, is published quarterly, and 3,500 names are on the regular mailing list. The Board's registration of institution inmates now contains 71,226 names, and is constantly growing. There are about 1,500 books and pamphlets pertaining to sociology in our library. In addition to these special items and the routine work of the office, the Secretary is, ex-officio, a member of the State Truancy Board, and serves as its president. Considerable correspondence is had with the truant officers, of whom there are 111, and their annual reports are made to him. The expenses incident to this work are paid from the appropriation of the Board of State Charities.

In order better to do the work required of it, the Board asks that its annual appropriation for expenses be increased from \$8,000 to \$10,000, a proportionate amount of the \$2,000 increase to be available for the remainder of the fiscal year ending October 31, 1907. The annual report and the Indiana Bulletin of Charities and Correction should be printed, as heretofore, at the expense of the Bureau of Public Printing, Binding and Stationery.

Four agents are at present employed by the Board to carry out the requirements of the dependent children act of 1897. These agents inspect annually the forty orphans' homes receiving public wards; they visit children placed in private families and report on their condition; they investigate applications for children; they place children with private families; they confer with Boards of County Commissioners and other officials having to do with the care of dependent children. There is no question of the value of this work, but it is not possible for the Board to do all that is contemplated by the law with its present force of agents. There are more than 3,000 children in private homes, which should be visited at least annually. During the year just closed the agents, working as diligently as possible, were able to make but 1,695 visits to such children. With more agents more work could be accomplished. The Board therefore asks an additional \$4,000 annually, which, with the present appropriation of \$6,000 and the statutory provision of \$2,000, will provide \$12,000 annually for the department. A proportionate amount of the \$4,000 increase should

be made available for the remainder of the fiscal year, ending October 31, 1907.

The Board also asks that the appropriation of \$1,000 annually for the transportation of dependent children, to be repaid by the several counties according to Section 9 of the Dependent Children's Act of 1897, be continued.

More detailed information regarding the State institutions, poor asylums, county jails, epileptics, the insane, out-door poor relief, the indeterminate sentence, etc., will be found on subsequent pages, and to these special attention is called.

RECOMMENDATIONS TO THE LEGISLATURE.

THE STATE PRISON BOARD OF CONTROL.

The State Prison alone, of the thirteen State institutions, is managed by a board which is not required, by law, to be non-partisan. We are glad to say that the present board is non-partisan, and we recommend that this practice be prescribed by law.

HOUSE OF CORRECTION FOR WOMEN.

With the removal of the Industrial School for Girls to a new location, the wing of the building now occupied will be available for other purposes. This could be remodeled and made into a workhouse for women prisoners. The lack of proper sex separation in our jails, the scandals that have developed in some of them on account of the confinement of women therein, and in general the unsatisfactory treatment there accorded to women, and the lack of employment for them, should lead us all to desire a more satisfactory solution of the problem of the care and confinement of female prisoners. The utilization of the vacated parts of the Industrial School buildings, as above suggested, seems to be perfectly natural and desirable. Long-term prisoners could be sentenced to the Woman's Prison, as they now are; those sentenced for a short term, to the workhouse for women, and no convicted woman would thereafter be confined in any jail or workhouse in the State. The buildings could be remodeled at a comparatively small cost. The prisoners could be employed at productive labor. The two institutions could be operated by the same board, with the same organization, and at less expense per capita than women are now maintained in the county jails. In addition, we would be relieved of scandals and of the troubles arising from poor provision for the separation of sexes, and there would be no difficulty in supplying all with ample work. The institution should embody in its spirit and practice the best reformatory methods.

COUNTY JAILS.

The jail system we have is a relic of the olden times. It is not creditable to the State. The result of its operations is injurious. Our jails, as they are conducted, do more harm than good. In a rational prison system the jails should be simply places of detention. Convicted prisoners should be confined elsewhere. Provision should be made by law for the official condemnation of county jails by some board. The condemnation should be provided for when the jail is badly out of repair; when it is unsanitary; when the moral conditions are bad. In any event the authorities should be notified and given a reasonable time to remedy the wrong. In case of failure to do so, the facts should be properly presented by the board, and it should prohibit the use of the jail until the fault was remedied or a new jail built.

PROBATION FOR ADULTS.

Occasionally it is found that under the laws of the State an adult is technically guilty of a crime, but in the opinion of the judge the offender should be released upon a suspended sentence. There is no law for releasing such offenders upon probation. In our opinion one should be enacted. We believe it would not only save to usefulness lives which would otherwise be ruined by the stigma which attaches to imprisonment, but would also save the State money.

NEEDS OF THE INDIANA BOYS' SCHOOL.

While much excellent work has been done by the Indiana Boys' School, many things are badly needed to afford proper training and make well-rounded boys. Most prominent among these needs are improved educational facilities, provision for a library and a gymnasium, and the thorough repair of the present property. There should be ample provision for maintenance and for at least two State agents to find homes for and visit the boys released under the jurisdiction of the school.

DESERTION OF FAMILY.

The frequency with which children become dependent or delinquent through desertion by their parents is often brought to our attention. The township trustees, the orphans' homes, and the

courts can all bear testimony to this unfortunate condition. We recommend that the desertion of children be made a felony in this State. The result, we are sure, will be the preservation of homes, because more persons will be compelled to assume their parental responsibilities and fewer children will become dependents.

PROVISION FOR THE INSANE.

Indiana has assumed the responsibility of caring for all her insane citizens, but she has not been true to the obligation assumed. That she has done well, we all know, but she has not come up to her full duty. That is, that she shall make provision for all those unfortunates needing care and treatment. We should be careful not to make our insane hospitals too large. The Central is twice as large as it should be, and most of the others should not be increased, unless it is by colonies. The colony plan for caring for the insane, which contemplates the purchase of a farm a little distance removed from the insane hospital, yet near enough to be under its supervision and care, offers a feasible plan for providing additional room for the insane. This has been tried in other States, and the experience has been very satisfactory. To such a colony could be removed a number of mild, harmless, teachable patients, who would be benefited by the simple life and outdoor employment. We recommend that it be tried at one or more of our existing hospitals where the opportunity seems to be best.

We should not wish to see any additions built to the Central Hospital at Indianapolis, yet we feel that a receiving hospital would be a valuable aid to this institution.

LAND FOR THE SOUTHERN HOSPITAL FOR THE INSANE.

The small amount of land at the Southern Hospital for the Insane renders it impossible for the patients to get the benefit from outdoor life that they might have. The congenial employment of certain classes of patients is considered to be most valuable in their treatment. The care of orchards, small fruits, vines, gardens and live stock, including an ample dairy, would furnish such helpful employment, and at the same time the products would be very useful in supplying the institutions with fresh fruit and vegetables and an ample supply of milk. To do this, it is essential that an additional acreage be purchased for the use of the Southern Hospital.

This should be not less than 160 acres. In fact, it is the opinion of some of the best institution superintendents, gathered from their ripe experience, that such an institution should have at least one acre of land for each inmate, counting its maximum population.

ATTENDANTS AT HOSPITALS FOR INSANE.

There has been increasing difficulty in obtaining and keeping attendants at our hospitals for the insane at the low wages paid. At times the number has been much below that needed, and unless adequate compensation is provided the service will likely suffer. The Legislature should provide for this.

UNPAID BOARDS OF TRUSTEES.

The Board of State Charities, from its beginning, has favored unpaid boards of trustees for our State institutions. After an experience of seventeen years, during a part of which time most of our boards have served without compensation, we are more than ever impressed with the belief in unpaid boards of trustees. We believe that they render the best service and in all respects are more satisfactory. Many persons will accept such positions as an honor. The service they render will be as faithful as if paid for. The small compensation allowed is not an attraction to those who would be glad to render service for its own sake. It is attractive, however, to many who will accept such positions for the small salaries paid. We feel it would be better for the institutions and for the State if the boards were composed of members who were paid only their actual expenses.

DISTRICT WORKHOUSES.

Most of the prisoners who are convicted and sentenced to jail are charged with violating the State laws. It is hard to understand why the State should not have charge of them. In most of our jails the prisoners are not separated, they are not classified, and they lead idle and frequently immoral lives. Why should not the State establish one or more workhouses as the need seems to arise, under State control, conducted on the merit system? These could be located upon diversified land, so as to afford as great a variety of employment as possible. The experience of

some of our sister States in this way should encourage us as to the probable success of such a venture. To these workhouses all convicted prisoners could be sent who now go to the county jails, except the sentence be an exceedingly short one. There they would be under good discipline and proper training, and would have regular employment. The prisoners could be more cheaply maintained in such institutions, and, inasmuch as they would be conducted in accordance with the best reformatory methods, better results should be secured.

INSANE CRIMINALS.

There are confined in both our prisons for men, in the hospitals for insane, and at times in county jails, persons convicted of crime who are insane. An insane person can receive neither proper treatment nor right care in a penal institution. Some of them doubtless could be benefited or cured if they could be properly treated. Unless they can be restored in mind they must be a continuing expense upon the State as long as they live. They are troublesome in prisons and jails, interfering with discipline, disturbing the peace, and not infrequently assaulting other inmates or officers. For their own good, the good of the State, and the best interests of the institutions, as well as a matter of economy, provision should be made for a hospital associated with one of the existing institutions, for the proper care and treatment of these unfortunates.

TREATMENT OF CONSUMPTIVES.

The care of consumptives and the treatment of tuberculosis have been brought prominently before the people of our country. No other disease is so fatal. Tuberculosis is a transmissible disease. It has been demonstrated that, if taken in time, a large per cent. of the cases can be cured. In some States sanatoria for the treatment of those afflicted with this great scourge have been erected and are in operation. Private institutions are also giving treatment to such afflicted ones. We have been pleased heretofore to call attention to the necessity of investigating this question. The appointment of a commission for such purpose by the last Legislature was a wise step. We hope that the result of its investigations will be beneficial in bringing to our people and

to the next General Assembly such information as will assist us in an energetic and efficient warfare against this plague. We recommend that a beginning be made in the best possible way and at the best possible place for an institution for the treatment of tuberculosis.

SUPERVISION OF THE STATE'S WARDS.

There is nothing which pays so well, whether measured by the good it accomplishes or by the value received for money expended, as thorough supervision of those who are wards of the State and have gone out from its several institutions. The dependent children who have been placed out in family homes are supposed to be looked after by representatives of the orphans' homes from which they have gone and by agents appointed by the Board of State Charities. There is supervision by special agents of the men released on parole from the Reformatory and the State Prison. There is also an agent of the Soldiers' and Sailors' Orphans' Home who does some work and should do more. Similar agents are needed at the Indiana Boys' School, and an additional one for the Industrial School for Girls, and all these agencies should be brought to their highest efficiency in order that good homes may be sought and that a complete and thorough supervision of all the State's wards may be had.

As will be shown in this report, the Board of State Charities is not able, with the appropriation made to it, to do the visiting or exercise the supervision over the State's minor wards that the Legislature intended. The appropriation is not sufficient to properly do this work. Therefore we recommend an increase by which at least two agents may be added to the force of officers.

SICK AND CRIPPLED CHILDREN

Those who have to deal with the dependent and neglected children of our State know that there are many cases where these little ones can not be received into a family, or are not permitted to receive an education or learn a trade, because they are crippled or sick. Many of these could be readily cured if the right provision was made for their care and treatment. As it is they have not a fair chance in the world. Their infirmities shut them out of good homes, prevent their obtaining an education and deprive

them of a chance to earn a livelihood. Consequently they are burdens upon their relatives or upon the public throughout their lives. By a very small expenditure per capita, in an institution provided for their needs, a large number of them could be restored to their natural rights as children—the right to a home, to an education, to work for a living.

THE SCHOOL FOR FEEBLE-MINDED YOUTH.

Under the present law, committing women between the ages of sixteen and forty-five years to the custodial department of the school for Feeble-Minded Youth, the complainant is liable for the costs of such procedure. The law should be changed so that the prosecuting attorney can bring such action upon information.

THE JUVENILE COURT LAW.

It appears that the juvenile court law makes no provision for the hearing of children's cases, other than those brought by the Board of Children's Guardians, in vacation. This law should be amended so that all cases coming under the juvenile court law may be heard in vacation. Some other amendments to this law are also worthy of consideration.

PROVISION FOR EXPENSES TO STATE CONFERENCE OF CHARITIES.

The value of the State Conference of Charities is known to all who have given consideration to the subject. Objection is sometimes made by a disbursing officer to the payment of expenses of an official in attending these conferences. Definite provision should be made by statute for the payment of this expense.

THE STATE INSTITUTIONS.

There is a gradual increase from year to year in the number of persons to whom the State gives its care. Since this Board first began receiving reports from the State institutions in 1890, the enrollment of inmates on the 31st of October of each year has grown from 5,406 to 10,416, an average annually of 313. It is gratifying to know that the bulk of this increase is found in the benevolent rather than in the penal and correctional institutions.

During the year ending October 31, 1906, 2,652 persons were received into the State institutions and 2,551 were withdrawn. The daily average attendance of inmates for the year was 9,604.98, of whom 5,863.32 were men and 3,741.66 were women. The increase over 1905 is 173.06 in daily average attendance of inmates. The number of inmates enrolled on the last day of the fiscal year was 10,315 in 1905; 10,416 in 1906, an increase of 101. Considered individually, some of the institutions will be found to have a greater, some a less number of inmates than at the beginning of the fiscal year. Among the benevolent institutions, the Central, Eastern and Southern Hospitals for the Insane, the Soldiers' Home, the Institution for the Blind and the School for Feeble-Minded Youth show an increase in population; the Northern Hospital for the Insane, the Soldiers' and Sailors' Orphans' Home and the Institution for the Deaf a decrease. Of the correctional institutions, the State Prison, Reformatory, and Industrial School for Girls and Woman's Prison show an increase, the Boys' School a decrease.

The regular operating expenses of the thirteen institutions for the year amounted to \$1,620,454.48, an average of \$168.71 per inmate. All finished the year within the appropriation made by the Legislature of 1905, with the exception of the State Prison and the Industrial School for Girls and Woman's Prison. The increase in the number of inmates of these two institutions and the fact that neither was provided with an additional per capita

allowance, as was the case with most of the other institutions, made it necessary for them to call upon the Governor's contingent fund in order to pay all the bills of the fiscal year. The State Prison was allowed \$2,385.05 and the Industrial School for Girls and Woman's Prison \$7,025.39.

Including the two sums just mentioned, the whole amount which became available for the operating expenses of the institutions was \$1,662,922.21. The unexpended balance amounted to \$42,-467.73. The per capita allowance made to certain institutions for the maintenance of inmates in excess of a certain fixed number and the extent to which it was necessary to draw upon it is shown below:

	Available.	Used.	Balance.
Central Hospital for Insane.....	\$11,321 94		\$11,321 94
Northern Hospital for Insane.....	3,659 25		3,659 25
Eastern Hospital for Insane.....	4,983 42	\$2,942 63	2,040 79
Southern Hospital for Insane.....	2,699 30	1,531 51	1,167 79
Institution for Deaf.....	19 45		19 45
School for Feeble-Minded Youth..	2,910 26	2,909 36	90
Indiana Reformatory	13,635 86	13,574 19	61 67
Indiana Boys School.....	1,663 18	1,663 18	
	\$40,892 66	\$22,620 87	\$18,271 79

In addition to the cost of operating the institutions, \$294,838.47 was spent for new buildings, land and permanent improvements, making the grand total expenditures for the year \$1,915,292.95. The receipts and earnings of the different institutions turned into the State Treasury cut this amount to \$1,751,534.20. This was reduced still further by reimbursements from the counties and from the National Government, amounting to \$127,394.87.

In the following tabulated statement will be found the amounts which became available for the regular operating expenses, new buildings and permanent improvements of the several institutions, together with the portion used and the unexpended balance. The amount available includes the appropriations specified by the Legislature of 1905, the per capita allowance for excess population of the institutions, the statutory per capita allowance for the maintenance of the State Soldiers' Home, and the amounts received from the Governor's contingent fund. Of the unexpended balances, some revert to the general fund, others are still available for use the coming year.

*Includes amount received from the Governor's Contingent Fund.

CENTRAL HOSPITAL FOR INSANE—INDIANAPOLIS.

Dr. George F. Edenharter, Superintendent.

Real estate, 160 acres. Capacity, 1,631. At the beginning of the year the hospital had an enrollment of 2,070 patients. During the year 441 were received, and the withdrawals and deaths numbered 535, leaving 1,976 enrolled October 31, 1906. Of these, 1,836 were actually present. The daily average attendance increased from 1,832.98 in 1905 to 1,858.89 in 1906. The average number of officers and employes for the year was 348.37.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$300,000 00	\$297,909 11	\$2,090 89
Maintenance on account of excess population	11,321 94		11,321 94
Repairs	25,000 00	24,965 07	34 93
Clothing	14,000 00	13,951 71	48 29
Painting	5,000 00	4,987 60	12 40
Total	\$355,321 94	\$341,813 49	\$13,508 45

New buildings and extraordinary repairs—

Laundry equipment	\$2,500 00	\$2,448 30	\$51 70
Cement walks	1,500 00	1,500 00	
Total	\$4,000 00	\$3,948 30	\$51 70
Grand total	\$359,321 94	\$345,761 79	\$13,560 15

The per capita cost of maintenance, based on the operating expenses and the daily average attendance for the year, was \$183.88.

The value of the produce grown on the institution farm and used during the year is estimated at \$3,565.38, or \$1.92 per capita, and the cost of producing it at \$1,450.27.

We have been favorably impressed with the improvements made in this institution the past year. Considerable painting and re-finishing have been done. In several of the wards new maple floors have been laid. Some of the bath-room floors have been replaced by cement and others patched. Partitions in the men's wards have been replaced by wire screens, affording better light and ventilation. New iron beds have taken the place of some of the old, unsanitary, wooden ones. The old buildings of this hospital cannot be made what they should be, but the repairs undertaken are a great temporary help. A fire occurred in the north wing of the men's department early in the morning of February 13. The attendants by quick work got it under control, and the loss was small.

The pressure for admission of patients still continues. With a normal capacity of 1,631, the hospital has an enrollment of 1,976 patients, 1,836 of whom were present on the last day of the fiscal year. It is not possible for a hospital to do its best work under such crowded conditions. It will be some time before the Southeastern Hospital for the Insane at Madison is ready for occupancy, and until then there will be no relief from the present conditions. The management is to be congratulated that no serious trouble has occurred.

The institution has had unusual difficulty in securing competent attendants. It is to be regretted that the patients can not be given more permanent and more skilled attendance. With the demand for labor and the low wages paid hospital employes, the

Superintendent has been compelled to employ attendants who are not as capable as one could wish, and who usually remain but a short time. With increased wages there should be opportunity for improvement in this respect.

The lectures given to medical students in the pathological laboratory are valuable, and the management of the hospital is to be commended for the interest it takes in this useful part of the work. Those who profit by it will certainly be enabled to extend greater aid to humanity and save many from becoming hospital cases through the instruction received in this way.

NORTHERN HOSPITAL FOR INSANE—LOGANSPORT.

Dr. Joseph G. Rogers, Superintendent.

Real estate, 293 acres. Capacity, 820. On October 31, 1905, the hospital had 952 patients enrolled; 163 were added and 180 withdrawn during the year, leaving the enrollment 935 at the close of the period. Of these, 856 were actually present. There was a slight decrease in the daily average attendance of inmates: 852.41 in 1905 and 848.6 in 1906. The average number of officers and employes for the year was 181.29.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$135,000 00	\$131,105 13	\$3,894 87

. The per capita cost of maintenance, based on the regular operating expenses and the daily average attendance for the year, amounted to \$168.49.

The value of the farm products grown on the institution farm and used during the year is estimated at \$13,229.67, or \$15.59 per capita, and the cost of producing it at \$6,491.56.

The two new cottages, for which the Legislature of 1905 appropriated \$80,000, are nearing completion. They are being built as were the last ones, in accordance with plans prepared by the Superintendent. Supplies were bought on bids, and the work done by the day. These cottages will add 140 to the capacity of the hospital, and the institution will then be in position to meet the needs of its district, at least for a time. They are both located on the women's side. This, we feel, is a mistake. With the addition of these two cottages there will be thirty-six buildings on the grounds, with a normal capacity of 1,000, which will have cost the State, in round numbers, \$700,000. The large tent in the hospital grounds, which has now been in use for four years, continues to be an object of choice to the able-bodied men. A number of repairs and improvements have been made during the past year, and in general the institution is clean, neat, and in good condition. The contemplated tile floors have been put in in the bath rooms and water closets. Considerable painting has been done. The terra cotta cresting on all the buildings has been replaced by galvanized iron. Additional laundry machinery has been put in. The wards have been supplied with new rugs, a new piano and some new bookcases. This institution was found on our visits to be maintained at a good standard. Dr. Frederick W. Terflinger has been appointed senior assistant physician.

EASTERN HOSPITAL FOR THE INSANE—RICHMOND.

Dr. S. E. Smith, Superintendent.

Real estate, 323 acres. Capacity, 742. Beginning the year with an enrollment of 739 patients, the hospital received 112 additional patients and dismissed 100, making the enrollment at the end of the year 751, and of this number all but 21 were actually present. The daily average attendance of patients increased from 714.55 in 1905 to 731.14 in 1906. The average attendance of officers and employes for the year was 153.6.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$116,000 00	\$116,000 00	
Maintenance on account of excess population	4,983 42	2,942 63	\$2,040 79
Repairs	6,000 00	5,969 22	30 78
Clothing	5,000 00	4,149 89	850 11
Total	\$131,983 42	\$129,061 74	\$2,921 68
New buildings and extraordi- nary repairs—			
Water supply	\$10,000 00	\$10,000 00	
Farm buildings	7,200 00	6,684 79	\$515 21
Tile floors and plumbing..	2,000 00	2,000 00	
Laundry equipment	1,400 00	1,131 96	268 04

Additions to Cottages G and H, and C and D....	1,800 00	1,800 00	
Total	\$24,900 00	\$21,757 19	\$3,142 81
Grand total	\$156,883 42	\$150,818 93	\$6,064 49

The per capita cost of maintenance, based on the operating expenses and the daily average attendance for the year, was \$176.52. The value of the produce grown on the institution farm and consumed during the year is estimated at \$12,491.49, or \$17.08 per capita, and the cost of producing it at \$4,949.05.

This institution is in good condition. Considerable repair work has been done, and new equipment added during the past twelve months. The water tower which has been erected is a useful adjunct to the water supply and is attractive in appearance. The laundry has been supplied with new machinery; additions have been made to cottages G and H and C and D; a new brick barn has been built, and a new root cellar completed. A better classification of the patients is made possible by the new buildings. The sewage disposal plant has given good results. The Pennsylvania Railroad Company has sought to enjoin the hospital authorities from placing the crossing over the tracks. The last Legislature made an appropriation of \$2,500 for this purpose.

It is gratifying to see so large a number of the men patients assisting in the outdoor work. It is beneficial to them, and the Superintendent says he has no difficulty in securing their help.

At the time of a visit early in the year, when there were 725 patients present, 525, or 72 per cent., went to the dining room for their meals.

A fire which promised to be serious occurred in the department for women early in the summer, but it was fortunately discovered at the right time, and resulted in but slight damage. The institution is crowded, and there are many demands for admission.

SOUTHERN HOSPITAL FOR INSANE—EVANSVILLE.

Dr. C. E. Laughlin, Superintendent.

Real estate, 160 acres. Capacity, 664. Number of patients enrolled October 31, 1905, 684; October 31, 1906, 697. The number of patients actually present on the last day of the fiscal year was 651. The average attendance for the year was 643.88, or 32.55 greater than for the preceding year. The average number of officers and employes for the year was 120.61.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$103,950 00	\$103,950 00	
Maintenance on account of excess population	2,699 30	1,531 51	\$1,167 79
Repairs	6,000 00	5,750 55	249 45
Clothing	4,000 00	3,890 24	109 76
Painting	1,000 00	1,000 00	
Total	\$117,649 30	\$116,122 30	\$1,527 00
New buildings and extraordi- nary repairs—			
Repairs to heating system (balance)	\$1,667 00	\$1,667 00	
Bakery and equipment....	4,000 00	3,883 74	\$116 26
Water tank and softening process	12,000 00	11,392 44	607 56
Equipment of machine shop (balance)	686 25	682 54	3 71
Equipment and painting of laundry	2,000 00	1,990 01	9 99
Warehouse and fire depart- ment	2,000 00	2,000 00	
Total	\$22,353 25	\$21,615 73	\$737 52
Grand total	\$140,002 55	\$137,738 03	\$2,264 52

The per capita cost of maintenance, based on the operating expenses and the daily average attendance for the year, was \$180.35. The value of the produce grown on the institution farm and used during the year is estimated at \$4,198.81, or \$6.52 per capita, and the cost of producing it at \$941.58.

Considerable has been done during the past year to put this institution in better physical condition. An addition to the warehouse and fire department has been erected; a new bakery built; the heating system repaired and the laundry and kitchen supplied with additional equipment. All but a small balance of the \$12,000 appropriation for a water tower and softening process has been expended. A fire in the power house occurred during the year, but it was put out with little damage.

Since the expiration of the twenty-year contract with the Southern Railroad Company for switching facilities, the Board of Trustees has given the traction line permission to put in a connection for temporary use. This will enable the hospital to connect with some independent mines on the traction line, and in case of a coal strike the institution will not be at the mercy of the strikers. There has been considerable complaint of the sewage disposal plant, and on this account a suit of \$15,000 against the hospital is pending.

The health of the patients generally is good, but complaint has frequently been made of the food. There is a lack of organization and discipline. There is dissatisfaction among the employes and complaint among the patients. This has interfered seriously with the work of the institution.

By direction of the Governor, the Board of Trustees inquired into the conditions existing, and several changes in the employes of the institution resulted. It is to be hoped that this action will result in improved conditions.

STATE SOLDIERS' HOME—LAFAYETTE.

Col. R. M. Smock, Commandant.

Real estate, 192 acres. Capacity, 876. At the beginning of the year the Home had 993 members enrolled. During the year 356 were added to the number enrolled and 213 withdrawn, leaving the enrollment on the last day of the 1906 fiscal year 1,136. Of

these 803 were present October 31, 1906. The daily average attendance increased from 680.25 to 706. The attendance of officers and employes for the year averaged 135, but of this number 81.5 were members of the Home on salary.

Under the law creating this Home, all honorably discharged soldiers, sailors and marines and their wives and widows, residents of Indiana, are eligible to admission. Under a law enacted in 1905 army nurses may also be received. The State appropriates \$12.50 per month for each member, officer and employe for current expenses, and is reimbursed to the extent of \$100 a year, allowed by the United States Government for every soldier maintained in a State Home.

Sewerage	3,000 00	2,232 87	767 13
Extension of steam pipes.	2,000 00	2,000 00	
Portrait frames	100 00	100 00	
Total	\$106,002 08	\$77,135 02	\$28,867 06
Grand total	\$239,704 29	\$202,187 27	\$37,517 02

The per capita cost of gross maintenance, based on the operating expenses and the daily average attendance, was \$177.13. The value of the produce raised on the institution grounds and used during the year is estimated at \$1,156.56, or \$1.64 per capita, and the cost of producing it at \$478.65.

The Legislature of 1905 provided liberally for specific improvements at the Home. In anticipation of the funds which became available November 1 of that year, much of the work was done during the summer. Considerable has also been done during the past twelve months. The new Widows' Home, with accommodations for 96, was occupied August 1. It is well built, but in some details the plans of this new building are unfortunate. Changes were suggested by our Board and some of them were made.

The ice plant has been repaired and the institution is making its own ice by the use of a gasoline engine. The smoke stack at the boiler house was struck by lightning early in the summer. The damage, amounting to \$425, was settled by the insurance company.

Typhoid fever occurred again early in the spring, and the Board directed the Commandant and Surgeon to make a report on the physical and sanitary condition of the Home. The report made called attention to bad plumbing, wet floors, bad sewer connections, lack of proper ventilation, and wet basements in buildings. The bad condition of the hospital generally was noted. The Board of State Charities had previously called attention to these unsanitary conditions, some of which were inexcusable. The Board of Trustees and officers, we feel, recognize these facts, and there has been improvement in a sanitary way, but much yet remains to be done.

There have been other improvements during the year. A simple yet comprehensive system of daily reports has been installed. Members of the Board of Trustees have expressed their intention of standing for proper institution administration and organization, with the commandant in full charge as the head of the institution.

Dr. S. R. Cunningham, a physician of institution experience, has been given charge of the medical service. There has been a notable improvement in the administration of the hospital and in the care of the sick. The quantity of whisky and drugs used has been much reduced. The medical work of the institution is better, and the expense has been greatly reduced.

The serious illness of the Adjutant, who has been a faithful officer, has hindered the work of his department.

SOLDIERS' AND SAILORS' ORPHANS' HOME—KNIGHTSTOWN.

A. H. Graham, Superintendent.

Real estate, 247 acres. Capacity, 630. At the beginning of the year the Home had an enrollment of 532 children. During the year 74 were added and 96 withdrawn, leaving the enrollment at the end of the year 510. All of these were present October 31. The daily average attendance decreased during the year from 491.25 to 452.5. The average number of officers and employes during the year was 96.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$100,000 00	\$100,000 00	
Repairs	5,000 00	5,000 00	
Library	300 00	300 00	
Insurance premiums	700 00	670 75	\$29 25
Agent's fund for home finding	1,000 00	956 05	43 95
Total	\$107,000 00	\$106,926 80	\$73 20
New buildings and extraordinary repairs—			
Completion of front fence.	\$750 00	\$748 73	\$1 27
Lumber and pipe house...	2,500 00	2,110 00	390 00
Total	\$3,250 00	\$2,858 73	\$391 27
Grand total	\$110,250 00	\$109,785 53	\$464 47

The per capita cost of gross maintenance, based on the operating expenses and the daily average attendance, was \$236.30. The value of the produce raised on the institution farm and used during the year, is estimated at \$5,219.74, or \$11.54 per capita, and the cost of producing it at \$3,407.92.

The work of this institution continues much as it has for several years past. The children are healthy, the institution is clean and neat. There is a good system of schools with kindergarten, cooking, music and stenography departments. There is some effort to give instruction in manual occupations. We regret to note that the health of the Superintendent, who has given so much of his life to this school, has not been good, and are pleased to learn that he is better. Considerable repairing has been done, and improvements have been made. The electric wiring which was condemned by the inspector has been replaced. The Home is generally in good physical condition. The Board of Trustees did wisely in not using the appropriation for the engine and dynamo house. The Board also directed that all receipts should be turned into the State Treasury.

The reduction in the appropriation for the expenses of the agent for the placement of children is to be regretted. While there has been in the past few years more feeling favorable to placing the children in family homes, the management has adhered somewhat closely to its policy of retaining a large number of the children in the institution until they are nearing or have reached the age prescribed by law at which they shall be discharged. As was stated in our report for 1896, the Board of State Charities is thoroughly convinced that this policy is not the wisest one for the welfare of the children. It matters not that the boys and girls while in the Home receive instruction in useful occupations. They cannot possibly be given the individual training, nor be subjected to the multifold experiences which are necessary to the upbuilding of strong and independent character. We believe that the placing of these children in the homes of respectable and industrial families should be made one of the most prominent and important departments of the work of the institution. The entire time of the agent should be devoted to seeking families of suitable character which are willing to receive children into their homes, and

to visiting children who have been placed with families to learn of their treatment and training. The public is being taxed thousands of dollars annually for the support of children in this institution, who should be in private homes, receiving the benefits of family life and individual attention, without expense to the State. We believe that the memory of the brave men who fought and died for the salvation of the Union will be most honored by the inculcation of independence and sturdy individuality into their orphaned children. These important objects can not be satisfactorily reached inside the sheltering walls of a great institution.

INSTITUTION FOR THE DEAF—INDIANAPOLIS.

Richard O. Johnson, Superintendent.

Real estate, 89 acres. Capacity, 340. At the beginning of the year the school had an enrollment of 325 children. During the year 56 were added and the same number withdrawn, making the enrollment at the end of the year the same as at the beginning. All of these were present October 31. The daily average attendance decreased during the year from 323.41 to 314.02. The average number of officers and employes during the year was 88.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$70,000 00	\$65,656 19	\$4,343 81
Maintenance on account of excess population	19 45		19 45
Industries	4,500 00	3,921 68	578 32
Repairs	1,000 00	999 19	81
Total	\$75,519 45	\$70,577 06	\$4,942 39

The per capita cost of gross maintenance, based on the operating expenses and the daily average attendance, was \$224.75. The value of the produce raised on the institution farm and used during the year is estimated at \$1,102.29, or \$3.51 per capita, and the cost of producing it at \$661.37.

In anticipation of moving to its new location, little has been done at this institution the past year in the way of improving its condition. There is not room for all the children who have applied for admission. The schools and manual training depart-

ment have been maintained as usual. All pupils have an opportunity to take the oral course of instruction. Those who do not show special aptitude for that take the manual course. Better work is being done in the schools. The institution has experienced difficulty in keeping help, especially in the kitchen and other domestic departments. The Superintendent is working very hard because he has added to his other duties the details of the new buildings. He needs more assistance in his office.

INSTITUTION FOR THE BLIND—INDIANAPOLIS.

George S. Wilson, Superintendent.

Real estate, 8 acres. Capacity, 150. At the beginning of the year the school had an enrollment of 135 children. During the year 23 were added and 30 withdrawn, leaving the enrollment at the end of the year 128. All of these were present October 31. The daily average attendance increased from 128.37 to 129.01. The average number of officers and employes during the year was 53.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.

Total	\$1,450 00	\$1,450 00	
Grand total	\$41,450 00	\$41,435 29	\$14 71

The per capita cost of gross maintenance, based on the operating expenses and the daily average attendance was \$309.94.

This institution is in good condition. The work of the schools last year was quite good. This fall the school has a new principal and two new teachers. We have been favorably impressed by the work in physical training and the manual work for girls.

SCHOOL FOR FEEBLE-MINDED YOUTH—FORT WAYNE.

Albert E. Carroll, Superintendent.

Real estate, 310.3 acres. Capacity, 850. At the beginning of the year the school had an enrollment of 1,039. To this number 42 were added during the year, and there were 46 withdrawals, leaving the enrollment on October 31, 1906, 1,035. On that date there were 1,023 children present in the school. The daily average attendance of inmates during 1906 increased from 1,016 to 1,017.37. The average number of officers and employes was 155.63.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$122,000 00	\$122,000 00

Custodial cottage for boys.	50,000 00	25,608 81	24,391 19
Total	\$61,831 89	\$34,970 90	\$26,860 99
Grand total	\$194,329 05	\$167,467 16	\$26,861 89

The cost of gross maintenance for the year was \$130.24 per capita, based on the operating expenses and the daily average attendance. The value of the produce raised on the institution farm and used during the year is estimated at \$6,833.21, or \$6.72 per capita, and the cost of its production \$5,466.57.

The principal work of construction at the school this year is the new custodial cottage for boys. This is practically completed, and in general the plans are quite satisfactory. It is well located, east of the hospital, and is constructed of brick made by the older boys of the school. It will accommodate approximately 150 children.

Considerable painting has been done and other minor improvements kept up. It has been gratifying to note the progress of the institution during the past year. The school work was unusually good. The hospital has been improved and the health of the children is very good. The stable which was burned has been rebuilt. The amount paid by the insurance company was turned into the State Treasury. This is unfortunate, as the principal reason for insuring is that in case of disaster the institution may have money immediately for the reconstruction of its buildings.

There is a continual effort to get unfit persons admitted to this institution. A number of women have been received into the custodial department who are not a menace to society and should never have been admitted. They have also some insane cases, some having been discharged under rules adopted by the Board. This tendency to crowd into institutions persons who are not fit subjects for them is notable in a number of ways. The feeble-minded are sent to other children's institutions, many of them for offenses for which they were not really responsible. Insane and epileptic persons are sent to prison. A better understanding of the State's provision for unfortunates and of the law would prevent much of this.

STATE PRISON—MICHIGAN CITY.

James D. Reid, Warden.

Real estate, 101 acres. Capacity, 760. There were 950 convicts present October 31, 1906, the daily average attendance for the year having been 918.9, an increase over 1905 of 54 in the number present and 32.9 in the daily average attendance. Three hundred and twenty-four prisoners were received during the year, and 270 released by discharge or parole. The average number of officers and employes for the year was 56.

EXPENDITURES.

Total	\$125,237 65	\$71,991 01	\$53,246 64
Grand total	\$246,002 70	\$192,601 80	\$53,400 90

The cost of gross maintenance, based on the operating expenses and the daily average attendance, was \$131.26 per capita. The value of the produce raised on the institution farm and used during the year is estimated at \$3,898.68, or \$4.24 per capita, and the cost of its production at \$579.94.

The work of reconstruction has been pushed as rapidly as possible during the past year, and conditions at the prison are very encouraging. The new dining-room, kitchen and store-room are completed, and the cellhouse has been enclosed. Plans for the chapel have not been adopted. A new warehouse has been built. It is intended for the storage of raw products and manufactured articles, and is located outside the prison walls. The area within the walls is not large enough for the needs. More land should be enclosed. The ordinary repairs of the institution have been kept up.

A binder twine plant was put in operation March 1. It has a capacity of four tons each day of eight hours, and employs sixty men. This plant is operated under the law of 1899, providing for the manufacture of goods on State account and appropriating a fund of \$125,000 for the purpose. It is essential that this should be a revolving fund, but the law does not so state specifically, and the next Legislature should remedy this oversight. While not all the twine made this year was sold, the warden feels encouraged. The twine is of good quality and there has been little complaint. The farmers generally have approved the new enterprise, and it is felt that the institution will be able to dispose of the entire output next year.

The labor contracts at the time of one visit had the following number of men employed: Cooperage, 100 men and 15 men employed in the heading department; granite cutting, 94 men; overalls, 100 men; shirt and jacket, 100 men, and 23 men in the finishing department.

The hospital is in good hands. With the utilization of another ward about 40 of the insane criminals are cared for. In the opinion of the physician, there are from 20 to 30 more in the prison who can not be cared for now except in their cells.

Chaplain H. L. Henderson died early in the year. He had been a faithful and useful officer.

A joint meeting of the board of this institution and the Reformatory to consider the question of the parole of transferred men was held recently. Other meetings are to follow. It is felt these will be helpful.

INDIANA REFORMATORY—JEFFERSONVILLE.

Will H. Whittaker, Superintendent.

Real estate, 20 acres. Capacity, 976. There were 1,093 inmates present October 31, 1906, the daily average attendance for the year having been 1,094.84, an increase over 1905 of 9 in the number present and 50.48 in the daily average attendance. Three hundred and seventy-seven inmates were received during the year and 368 released by discharge or parole. The average number of officers and employes for the year was 78.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.

Extra wall and paving drill ground	3,000 00	2,999 86	14
New solitary cells and building (balance)	807 12	804 84	2 28
Paints (balance)	16 71	14 89	1 82
Total	\$5,139 40	\$4,989 16	\$150 24
Grand total	\$168,275 26	\$167,443 26	\$832 00

The cost of gross maintenance, based on the operating expenses and the daily average attendance, was \$148.38 per capita. The value of the produce raised on the institution farm and used during the year is estimated at \$631.85, or 58 cents per capita, and the cost of its production at \$259.40.

The regular repair work of the Reformatory has been maintained during the past year, and some permanent improvements made. Principal among these are the new solitary cells, which are excellent in arrangement and construction. The second floor of this building will be used as a dining-room, and the roof as an airing court for consumptives. There has been a rearrangement of the hospital, and the doctor's office put on the first floor. Considerable painting has been done by the inmates. Additional room has been built for the storage of coal. The wall around the drill

ground has been built. A new engine and dynamo have been installed, and they seem to be giving good satisfaction. Some of the old buildings have been removed, and a great improvement in the appearance of the ground is the result. The new trolley system for conveying metal in the foundry will be quite a convenience.

There is improvement in the school work. From 200 to 300 are in attendance each day. New quarters for the school have been provided by remodeling the rooms over the store-room. The library has been enlarged.

The trade schools have been moved into the building formerly used as a chair factory. A new industry, that of shirt-making, has been installed, employing eighty men. Neither this industry nor the chain works will be of much help when the men go out to seek employment. Their one advantage is that they keep them busy. The trades at present taught in the institution are broom-making, printing, tinning, molding, carpentering, electricity, painting, tailoring, brick and stone masonry, laundering, blacksmithing and music. These are under fifteen instructors. Whatever of the product is not used by the Reformatory, by other State institutions, or by the political divisions of the State is sold upon the open market. The machine shop gives opportunity for men to learn an excellent trade. There were 24 men employed in this part of the work at the time of one visit, and all were in good health.

There were two notable addresses to the prisoners at this institution the past year, one by Bishop J. H. Vincent, the other by Mrs. Maud Ballington Booth.

The tinware, brooms and clothing supplied to other State institutions from the Reformatory have given good satisfaction.

The increase of population recently is not on account of more men sentenced and received, but because the Board has granted fewer paroles.

INDUSTRIAL SCHOOL FOR GIRLS AND WOMAN'S PRISON—INDIANAPOLIS.

Miss Emily E. Rhoades, Superintendent.

Real estate, $17\frac{3}{4}$ acres. Capacity: School 160 and prison 42. There were 260 girls present October 31, 1906, the daily average attendance for the year having been 253.16, an increase over 1905

of 21 in the number present and 39.14 in the daily average attendance. One hundred girls were received during the year, and 79 released by discharge or parole. In the prison there were 52 women present on October 31, 1906, the daily average attendance having been 55.94. This shows a decrease of 1 in the number present from 1905, and an increase of 3.95 in the daily average attendance. Twenty-eight women were received during the year, and 29 released by discharge or parole. The average number of officers and employes for the two institutions was 33.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$38,000 00	\$38,000 00	
Maintenance (Governor's contingent fund)	7,025 39	7,025 39	
Repairs	3,000 00	2,574 10	\$425 90
Library	300 00	104 11	195 89
Discharge, clothing and pa- role	700 00	510 10	189 90
Total	\$49,025 39	\$48,213 70	\$811 69

The per capita cost of gross maintenance, based on the operating expenses and the total average daily attendance for the year of both prison and school, 309.10, was \$155.98. The value of the produce raised on the institution farm and used during the year is estimated at \$487.51, or \$1.58 per capita.

With a capacity for caring for 160 girls, this school had an average daily attendance during the past year of 253. At one time there were 278 girls present. It is necessary to have some of them sleep and eat in the halls. Under such crowded conditions it is difficult to maintain discipline, to keep the girls employed, or to give them proper training.

The usual repair work has been done during the year. Miss Nan B. Wood has been employed as placing agent. She took charge July 1, and is doing good work. There are several other new officers at the institution.

Help has been given the officials in classification and organization, and the establishment of a system of daily reports.

The investigation which was held in December had, as such usually do, a bad effect on discipline.

INDIANA BOYS' SCHOOL—PLAINFIELD.

E. E. York, Superintendent.

Real estate, 527 acres. Capacity, 550. There were 568 boys present October 31, 1906, the daily average attendance for the year having been 580.73, a decrease from 1905 of 6 in the number present and 4.27 in the daily average attendance. Four hundred and eight boys were received during the year, and 414 were released by discharge or parole. The average number of officers and employes for the year was 56.41.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$75,000 00	\$75,000 00	
Maintenance on account of excess population	1,663 18	1,663 18

Library	500 00	500 00	
Total	\$84,163 18	\$84,163 18	
New buildings and extraordi- nary repairs—			
New vegetable cellar.....	\$500 00	\$499 90	\$0 10
New bakery	2,000 00	1,999 96	04
Cement sidewalks	1,000 00	1,000 00	
Fire hose and asbestos cov- ering	1,000 00	1,000 00	
Printing office (balance)..	14 27	14 27	
Total	\$4,514 27	\$4,514 13	\$0 14
Grand total	\$88,677 45	\$88,677 31	\$0 14

The per capita cost of gross maintenance, based on the operating expenses and the daily average attendance for the year, was \$144.93. The value of the produce raised on the institution farm and used during the year is estimated at \$15,334.98, or \$26.41 per capita, and the cost of producing it at \$2,922.19.

The boys in this institution are kept very busy at all kinds of work, the gardening, the brickyard and the new buildings requiring most of their attention. Considerable work has been done putting down new walks and cleaning up the grounds. Altogether, the school has had more building the past two years than the boys could do.

Neither the hospital nor the cottage is yet ready for occupancy. Both of these would have been completed long ago but for two reasons: one, lack of help; the other, lack of some necessary equipment which will have to be provided for out of the fund for the coming year. Work on the new shop building, the bakery and the milk house and the root storehouse progresses. The boilers have given considerable trouble the past year. A new pumping station with an electric pump has been installed, and the institution now has a better water supply. A water softening process has been put in.

Lack of funds has been the greatest trouble at this school. It has not for years had enough money to maintain it properly. With the facilities afforded, good work is being done, but the next Legislature should make liberal appropriations for repairing the buildings, improving the equipment, conducting the institution and placing and supervising the boys. The health of the inmates is very good.

STATE INSTITUTIONS.

SUMMARY OF STATISTICS FOR THE YEAR ENDING OCTOBER 31, 1906.

(Prepared in Conformity to Resolution Adopted by the National Conference of Charities and Correction, Philadelphia, May, 1906.)

MOVEMENT OF POPULATION.

	Males.	Females.	Total.

THE INDETERMINATE SENTENCE AND PAROLE LAWS.

Those who are familiar with what is being done under the indeterminate sentence and parole laws, especially those who have watched the results achieved since their enactment in 1897, realize the value of these laws in the State's penal system.

All prisoners at the State's prisons and the Reformatory, except those convicted of treason or murder, are serving under an indeterminate sentence and a large proportion of those who leave those institutions are released under the parole law. A direct result of the laws is to be found in the slight change in the prison population, the increase in which in the past eight or ten years has by no means kept pace with the increase in the population of the State. It is true that the past year has seen an increase in the daily average number of inmates of the penal and correctional institutions, but this may be explained by the more stringent rules recently adopted by the parole boards for the conditional release of prisoners.

From April 1, 1897, to October 31, 1906, a total of 3,643 men has been paroled from the State Prison and the Reformatory—1,358 from the former institution and 2,285 from the latter. The less number paroled from the State Prison is due to the fact that that institution receives the older and more hardened criminals, while the Reformatory deals with no one over thirty years of age. Of the number released on parole, 1,968 have been discharged after having complied with all the conditions of their parole; of 281 the maximum of the term for which they were originally sentenced expired while they were on parole, and they were released from further supervision; 73 died; 407 are still reporting. These four classes make a total of 2,729, or 75 per cent. of the whole number paroled. The remaining 914, or 25 per cent., are the unsatisfactory cases. In one way and another they violated the terms of their parole. Five hundred and three have been returned to the institution from which they were released; 411 are still at large.

No man is released on parole until employment is found for him, either by the agent of the institution or by his own friends. He is then required to report to the institution at stated times and must include a statement of his earnings and expenses. From the reports made it is found that the 3,643 men, up to the time they ceased reporting, had earned \$919,335.68; their expenses amounted to \$741,712.98; the net savings were \$177,622.70.

The following tabulated statement will show the operations of the law in both the State Prison and the Reformatory, from April 1, 1897, to October 31, 1906.

	Prison.	Reformatory.	Total.
Returned for violation of parole.....	203	300	503
Delinquent and at large.....	119	292	411
Discharged	791	1,177	1,968
Sentence expired while on parole.....	88	193	281
Died	28	45	73
Still reporting	129	278	407
Total number paroled.....	1,358	2,285	3,643
Percentage of unsatisfactory cases.....	23.7	25.9	25
Total earnings of paroled men.....	\$364,324 29	\$555,011 39	\$919,335 68
Expenses	263,726 43	477,986 55	741,712 98
Savings	\$100,597 86	\$77,024 84	\$177,622 70

In a recent report of the Board of State Charities, attention was called to some figures which are worth repeating here. They had been obtained from the records of the State Prison and Reformatory and dealt with the length of time prisoners remained in confinement under the indeterminate sentence as compared with the definite sentence. The figures refer to the last three hundred men received under the old form of commitment and the first three hundred received under the new law, exclusive of those cases in which death, condition of sentence or other event interfered with the natural course of the sentence.

It has been found that while the average length of time served at the State Prison under the definite sentence law was one year, nine months and fourteen days, under the indeterminate sentence the average was three years, two months and twelve days, or one year, four months and twenty-eight days longer. At the Reformatory the average time served under the definite sentence was one year, eight months and twenty-two days; under the indeterminate

sentence, two years, four months and six days, or seven months, fourteen days longer.

Another set of figures which will be of interest in this connection shows that a less number of men are resentenced to prison now than in former years. In the years 1894, 1895 and 1896, the last three years before the indeterminate sentence law went into effect, 43 men who had previously served time in the State Prison South were readmitted to that institution, and in the same years 133 were readmitted to the State Prison North. It is now nine and one-half years since these two institutions became known under the new law as the Indiana Reformatory and the State Prison, respectively, and in that time 101 men have been resentenced to the Reformatory and 240 to the State Prison. Thus it is seen that ex-convicts have been returned to prison at the rate of 58 a year under the old form of commitment and 36 a year under the new law.

Indiana's experience with these laws in the past nine and one-half years has attracted considerable attention, and from time to time requests are received at the office of the Board of State Charities for copies of the laws and information regarding their working. Within the past few months such requests have come from California, Missouri, Iowa, North Dakota and the Province of Ontario.

The most important part of the work of an institution is the supervision of those who have been released from it. Thorough supervision and careful visitation are absolutely essential to secure good results. We feel that with the number of persons who are out upon parole, additional provision should be made for their supervision.

THE EPILEPTICS.

Within the past year Indiana has added to her charities an institution for epileptics. This was authorized by the Legislature of 1905, and is a great step forward. A tract of 1,228 acres of land near the city of New Castle has been purchased, and with the sum remaining from the appropriation a start has been made toward the erection of buildings. When ready for occupancy the buildings now planned will accommodate fifty patients. Under the law the patients first received will come from the county poor asylums. The coming Legislature will be asked to appropriate funds for other buildings, and it is hoped that before a great while a goodly number of these unfortunates will be receiving the care of an institution adapted to their needs.

In view of these facts, it will be interesting to know how many epileptics are now being supported at public expense. The latest reports indicate that there are 920 epileptics in the State and County institutions of Indiana: 367 in the hospitals for the insane, 305 in the School for Feeble-Minded Youth, and 248 in the county poor asylums. There are, in addition, a few epileptics in the county jails, of whom no figures are available. The number is probably less than ten.

Of the whole number of epileptics noted above, 480 are males and 440 females. Four hundred and twenty-seven are insane, 420 feeble-minded, and 73 have no marked mental deficiency. Classified by ages, 74 are under 16 years of age, 624 between 16 and 45 years, and 222 are forty-five years and over. The following tables give more detailed information regarding these persons.

How many epileptics there are in their homes or under the care of friends or relatives it is impossible at this time to tell. The number is probably several times greater than that cared for at public expense. Their condition is pitiable. In many of the homes they are being retained at a great sacrifice to their relatives and at great injustice to the epileptics themselves, who can have none of the privileges of life, to say nothing of its enjoyments. In a village peopled by their own class they could get much enjoyment out of life and be, in a way, useful citizens.

THE INSANE.

Indiana has four hospital districts, in each of which is located a hospital for the insane. The districts are named the central, northern, eastern and southern. The hospitals therein are located respectively at Indianapolis, Logansport, Richmond and Evansville, and are known as the Central Hospital, Longcliff, Easthaven and Woodmere.

Provision was made by the last Legislature for a new hospital district, to be known as the Southeastern District. Three hundred and sixty-three acres of land, located near the city of Madison, on a bluff overlooking the beautiful valley of the Ohio, have been purchased for the site of the new hospital. It is contemplated to provide at this institution for 1,000 persons.

Indiana has done well in her efforts to make provision for her insane. In addition to this new institution, three hospitals have been built since 1883 and increased quarters as well as additional facilities have been provided at the Central Hospital. But with all that has been done for the insane, the institutions are not large enough, because of the great increase of the State's population, to accommodate those who are adjudged insane. From our own experience and that in other States, it appears that they never will be unless we can provide in advance and have ready a bed for one in every five hundred of our population. In that way acute cases can be received promptly. It is well known that the chances for recovery in the supposedly curable case are many times more when the patient can be taken to a hospital soon after he is affected than after a delay of even a few months, for then there is much more probability of his insanity becoming chronic.

In this connection Indiana should establish a policy regarding provision for the insane. Under this a complete system could be developed providing for affording the best treatment for the new and acute cases, the chronic types can receive the best care and the colony plan for the care of defectives can be brought into use to take care of the mild, able-bodied, harmless, chronic class, so that

they may live the simple life of the farm, with greater variety of exercise, employment and food. Less expensive buildings are required for such and the cost of maintenance would be reduced.

Better provision has been made for the care of the insane in several counties, including Marion, Tippecanoe, Parke, Allen, Adams, Montgomery, Benton and Grant.

At present there are in the State, according to reports received, the following number of insane persons:

DISTRICTS.	Enrolled in State Hospitals, Oct. 31, 1906.	In County Poor Asylums, Aug. 31, 1906.	In County Jails, Oct. 31, 1906.	Reported by County Clerks as Being in Homes or With Friends, Oct. 31, 1906.	Aggregate.
Central.....	1,976	354	13	55	2,398
Northern.....	935	57	12	19	1,023
Eastern.....	751	87	13	85	936
Southern.....	697	52	7	17	773
Total.....	4,359	550	45	176	5,130

It is interesting to observe that the number is the same as for last year, but the aggregate is differently divided. Of the whole number reported, 550 are in the county poor asylums, 45 in the county jails and 176 in their own homes or with friends or relatives. These make a total of 771. Included in the 4,359 patients enrolled at the State hospitals are 286 patients on furlough. These, added to the 771 just noted, make a total of 1,057 insane not receiving hospital care; 562 in the central district, 167 in the northern, 206 in the eastern and 122 in the southern.

By the time the new hospital at Madison is completed, there will probably be more than enough insane persons, considering the natural rate at which such persons are received and the growing population of the State, to fill a hospital of the size of that in process of construction. These, however, will be scattered over the several districts and the new institution will not be available to relieve them all. However, the Governor has the power to transfer additional counties from the present district to the new one. The two new buildings at the Northern Hospital for the Insane will afford relief for present demands there, but conditions are different in the southern and eastern districts. There the hospitals are

full and can not receive all who apply. In fact, in the eastern district there are a number of poor asylums and jails in which there are insane awaiting transfer, who can not be admitted to the hospitals because of lack of room.

Few persons appreciate the harmful influence of a jail upon an insane person. The newspapers occasionally report the injuries inflicted by patients who bruise themselves upon the bars of their cells. The bad conditions under which the insane live in some of our county poor asylums are such that we do not like to talk about or even think of them. Some of these are on account of bad buildings, lack of repair and other defective physical conditions that exist. Again it is because of poor administration, the superintendent being chosen for his knowledge of farming, yet being charged with the care of unfortunate insane who need an experienced person to deal with them. In some of our counties the insane are put into foul quarters. This has been observed in Franklin, Dearborn, Clark and Putnam counties. In other counties the insane have been found chained. In Benton County an insane man is kept in the summer in an enclosure surrounded by a high, tight-board fence. In this he is generally nude. In Switzerland county a destructive man is kept in a hut, rudely constructed of rough boards, in the back yard of the poor asylum. In Porter County complaint was made that the superintendent had abused the inmates of the asylum; that they had been whipped with whips and straps. We made investigation to ascertain the facts in the case, and they were reported to the Board of County Commissioners, with the result that the superintendent was discharged. In two other counties a year or two ago the superintendents admitted that they whipped the insane in order to make them behave, and they seemed to think it the proper thing to do. After vigorous explanation, however, they promised to desist, and so far as we can learn there has been no repetition of it.

When the State is able to care for all of her insane citizens, and only then, the abuses that exist in our jails and poor asylums with relation to the insane will cease.

OFFICIAL OUTDOOR RELIEF IN 1905.

The latest reports from township trustees, who are ex officio overseers of the poor, are for the calendar year 1905. The twelve months ending with December 31, 1905, form the first year's work of the trustees now in office, and it is a pleasure to be able to say that improvement has been noted in many parts of the State.

The Indiana Bulletin of Charities and Correction for March, 1906, contains a full report of the township poor relief of the preceding year. The trustees' reports are tabulated and the results set forth by counties and townships. The figures given below are a summary of this report.

The same Bulletin contains a valuable article on the history of outdoor poor relief in Indiana, with statistics for each township in the State from 1896 to 1905, inclusive.

For the year ending December 31, 1905, relief by township overseers of the poor amounted in value to \$249,884.68. This includes all kinds of relief—fuel, provisions, clothing, transportation, medical attendance and burials, also aid to children required by the compulsory education law to attend school. The reports indicate that 45,331 persons shared in this relief.

In comparing this record with that of the preceding year, it is well to call attention to the fact that the amount of relief given in 1904 was unusually high—the highest since 1899. The prevalence of smallpox and other diseases caused the increase in certain townships, but in others no satisfactory explanation was offered, and it was felt that many of the trustees became careless and marked their last year in office by a too generous administration of the poor funds. In some townships there was misuse of the public money.

The total value of the aid given in 1904 amounted to \$281,105.89, and the persons who shared in the relief numbered 46,009. The reduction in 1905 was \$31,221.21 in the value of the relief and 678 in the number of persons aided.

A peculiar coincidence is found in the fact that in comparing the 1904 report with that of 1903, it was learned that 70 coun-

ties had given more aid and 22 counties had given less aid than in 1903, while in a similar comparison of the 1905 report with that of 1904, the figures are reversed—70 counties gave less aid and 22 gave more aid than in 1904. Attention was called to the fact that of the counties in which a greater amount of aid was given in 1904 than in 1903, Wabash led, with an increase of \$2,831.40. This year of the 70 counties which gave less aid than in 1904, Wabash leads with a reduction of \$3,060.50.

Of the 70 counties mentioned as having made reductions in the amount of relief in 1905, Wabash, Marion, Knox, Tippecanoe, Wayne and Greene may be mentioned specifically. In each of these the reduction was more than \$1,500. Benton, Cass, Fountain, Howard, Miami and Wells report each a reduction amounting in round numbers to \$1,000.

In contrast with the reduction to which attention has been given, there are a few striking increases. In 22 counties the amount of poor relief was greater in 1905 than in 1904. In seven of these the increase was less than \$100; in nine others it was between \$100 and \$500; the remaining six counties, with the increase in each, are as follows: Montgomery, \$2,787.69; Lake, \$1,140.45; Grant, \$990.96; Jay, \$664.70; Morgan, \$591.42; Harrison, \$555.59.

The great increase in the cost of relief in Montgomery County in 1905 gives that county the record heretofore held by Knox—that of giving more aid than any other county in the State in proportion to its population. In 1896 and 1897, before the present reform laws went into effect, poor relief in Montgomery County amounted to \$9,000, in round numbers, according to the reports filed with the Board of State Charities. Under the operation of the law of 1899 it dropped to \$5,000. In 1904 the total value of the relief given amounted to \$5,600.42. In 1905 the value of the aid, \$8,388.11, was about the same as before the reform laws went into effect. In ten of the eleven townships in the county the poor relief has remained practically stationary throughout this period of ten years. In Union Township, however, in which lies the city of Crawfordsville, the relief has varied from \$6,904.57 in 1897 to \$3,333.36 in 1902. In 1905 it amounted to \$6,825.53. The increase from the preceding year was \$3,040.17, and this alone was but slightly less than the average amount given during

the four preceding years. The cost of the relief to each inhabitant of the county was twenty-nine cents, the highest of any county in the State. The number of persons aided was equal to one in twenty-three inhabitants. No other county in the State aided so large a proportion of its population. No other township of similar population gave so much relief as was given in Union Township in 1905.

Another township whose record is in some particulars similar to that of Union in Montgomery County is Center in Grant County, containing the city of Marion. The county as a whole shows an increase of \$990.96. The increase in Center Township alone amounted to \$2,066.86, but this was offset by reductions in nine of the other townships in the county. In Center Township in 1905 the relief given amounted to \$3,709.96. This was practically the same as was given in 1897, 1898 and 1899, before the present reform laws went into effect. The trustee states that there has been an unusual lack of work in the township the past year, but that conditions are improving, and he expects to cut the amount of relief in half by the end of another year. The cost of poor relief per capita of the county's population was fourteen cents, and the number aided was equal to one in every thirty inhabitants.

Other townships in the State in which are found notable increases in the amount of relief given in 1905 are as follows: North in Lake County, \$1,427.81; Wayne in Jay County, \$794.32; Jeffersonville in Clark County, \$698.69; Franklin in Johnson County, \$631.33; Washington in Morgan County, \$555.54. In explanation of the increase noted in North Township, Lake County, it should be stated that the former trustee failed to report all the relief given.

Taking up for consideration the per capita cost of poor relief to the population of the different counties, we find that while the average for the State is ten cents, forty-nine of the counties, or a little over one-half, have a per capita expense below ten cents; in thirty-five counties it was between ten and twenty cents, and in eight, between twenty and thirty cents.

In addition to the cost of poor relief in the different counties, it will be found interesting to study the figures showing the number of persons aided. The trustees report 45,331 persons as having shared in the relief given in 1905—21,587 males and 23,744 fe-

males. Of these 19,978, or 44 per cent., were children under sixteen years of age; 16,545, or 37 per cent., were from seventeen to sixty years of age; 5,072, or 11 per cent., were sixty-one and over, and of 3,736, or 8 per cent., the age was unknown or unspecified. The number of families aided was 9,820. Aid was given 86,870 times. The number of persons who received aid extending over a period of three months or more is striking, taking into consideration the fact that under the law the trustee is expected to give temporary aid only. In the case of practically one-third of those aided, relief was given during three months or more. This was not always continuous aid. The number of persons aided in the whole State is equal to one in every fifty-six inhabitants.

A report of the tax levied in each township in 1905, to reimburse the counties for money advanced for poor relief, has been made by the county auditors. The highest levy made is fifteen cents, and is reported from Polk Township, Monroe County; also from Southeast Township, Orange County.

Taken altogether, the indications are that progress is being made in the administration of the township poor funds. The new trustees generally are showing intelligent interest in their work. In some townships, because of a misunderstanding of the law, expense has been borne by the trustee which properly belongs to the county, such as burial of soldiers, maintenance of dependent children, expenses connected with sending children to State institutions, etc. It occasionally happens that the expenses connected with quarantining a family on account of communicable diseases is paid by the trustee instead of by the town or county Board of Health, as the law contemplates. These matters will doubtless become properly adjusted in the course of another year's experience.

In a number of the counties there has been a gratifying change in the matter of supervision by the board of commissioners. About one year ago it was found that twenty-seven counties were not complying with the law requiring the county council to appropriate, and the commissioners to advance, to the trustees the money required for poor relief, the money to be paid the trustees as they filed their reports of poor relief in accordance with section 20 of the law of 1901. In these counties the funds accruing from the tax levied in each township for poor relief were turned over

directly to the trustees. At the suggestion of the Board of State Charities the Governor wrote these counties, calling attention to the law, and as a result practically all have changed their methods to conform to the statute.

STATISTICS 1905.

Total number of persons receiving aid.....	45,331
Total number of males receiving aid.....	21,587
Total number of females receiving aid.....	23,744
Total number of times aid was given.....	86,870
Total number children 16 years and under.....	19,978
Total number males 17 to 20 years, inclusive.....	585
Total number males 21 to 60, inclusive.....	6,636
Total number females 17 to 60, inclusive.....	9,324
Number of persons 61 and over.....	5,072
Number of males 21 and over.....	9,311
Number of families aided.....	9,820
Number of white persons aided.....	42,156
Number of colored persons aided.....	3,175

Nationality—

American	31,905
Irish	867
German	2,060

Principal Reasons for Giving Relief—

Lack of employment.....	622
Sickness and burials.....	9,802
Old age.....	2,188
Widowhood and non-support.....	2,032
Insanity or idiocy.....	287
Blind, deaf or crippled.....	1,167
Number given transportation.....	2,235

Occupation of Those Aided—

Farmers	350
Housekeepers	1,258
Skilled trades.....	809
Clerks, agents, office employees.....	57
Professions	88
Laborers	7,991

Cost of Relief—

Total value of aid given.....	\$249,884 68
Average value of aid to each person aided.....	5 51

OUTDOOR RELIEF BY TOWNSHIP OVERSEERS OF THE POOR, 1891-1905.

(No statistics obtainable for 1892.)

REPORT OF THE SECRETARY.

Ladies and Gentlemen—As you are aware, the past year has been a busy one for our office. Never before have there been so many demands upon the present Secretary's time. He has done the best he could to meet requirements, but has not always been able to respond. In addition to the other work done, there have been but two years when he has made more visits. These make a total of 275, and may be classified as follows:

In Indiana:

State institutions.....	62
County poor asylums.....	30
County jails.....	40
Orphans' homes.....	13
Boards of County Charities.....	19
City institutions.....	12
Private institutions.....	3
Miscellaneous	55
	— 234

Outside the State.....	41
------------------------	----

Total	275
-------------	-----

On invitation I accompanied Governor Hanly and the Epileptic Village Commission on its visits to some fifteen sites that had been selected for consideration for the proposed Village for Epileptics. A site near New Castle was chosen, and following the purchase of the land the Governor appointed Enoch G. Hogate, Silas W. Hale and Charles L. Henry a Board of Trustees for the construction and management of the new institution. The board began its work by wisely informing itself concerning existing institutions for the treatment of this class of unfortunates, and then visiting several of them. At your request I accepted the invitation of the members to accompany them. The visits included the School for Feeble-Minded Children at Waverly, Mass., and the colony from this institution at Templeton. Both of these contain epileptic children. We visited also the Hospital for Epileptic Children at Baldwinville, the Hospital for Epileptics at Palmer,

the New Jersey Village for Epileptics at Skillman, and Craig Colony for Epileptics at Sonyea, N. Y. In this way all the different kinds of care for the different classes and ages of epileptics were seen. At Waverly was the school work with children; at Templeton the colony idea for older boys who had completed their education and were established there in plain, inexpensive buildings, living the simple, healthful life of the farm. At Baldwinville the children needing hospital care were seen. At Palmer the insane epileptics principally are to be found, but also some good ideas of independent cottages and the employment of these defectives. At Skillman we found the work of developing a village, which has now been in process for ten or more years, and in which farm houses are utilized for the epileptics. At Sonyea, in the great institution established there by the State of New York, we saw the colony or village method of the treatment of patients, their classification and employment. Arrangements were made in advance to meet not only the superintendents of these institutions, but also the head of the Massachusetts State Board of Insanity, who, with the heads of the institutions, very kindly gave every facility to the members of the commission in their inquiry, as well as the benefit of their experience.

As you directed, I accompanied the warden and architect of the State Prison to visit several of the Eastern prisons and study prison architecture, having in mind the construction of the new cell-house and chapel at the State Prison. The following institutions were visited: In Pennsylvania, the Western and the Eastern Penitentiaries; in New Jersey, the State Reformatory; in New York, the House of Refuge on Randall's Island and the Penitentiary on Blackwell's Island; in Connecticut, the State Prison; in Massachusetts, the State Prison, the City Prison on Deer Island, the State Farm, the Reformatory for Women and the Reformatory for Men.

In May I attended the National Conference of Charities and Correction at Philadelphia with some of our members, and the Conference on Truant, Backward and Delinquent Children, which met two days before. This trip gave me an opportunity to visit the House of Refuge at Glen Mills, the School for Feeble-Minded at Elwyn, and the Philadelphia Working Home for Blind Men. Following the National Conference I attended the National

Tuberculosis Congress in Washington, and visited the new almshouse near that city.

The National Prison Association met at Albany, N. Y., September 15-20. This was the largest gathering the Association has ever held. I also attended the meeting of the National Children's Home Society at Louisville, Ky., in June. It has been impossible to accept all the invitations to attend meetings in other States, or even in our own. However, I have been at the Illinois State Conference of Charities, Chicago, which was held October 24-26, and the Indiana State Conference of Charities, Muncie, October 6-9. I accepted also the invitation of the Iowa Board of Control to attend its meeting with the superintendents of the State institutions at Des Moines, on March 20, and to speak on the reformatory system and the indeterminate sentence law. I also made an address before the School of Philanthropy at St. Louis, March 2. Several of these invitations carried with them the payment of the expenses of the speaker.

Invitations were also accepted to attend a large number of meetings and conferences in the interest of charities or improved social conditions in our own State. Some of these were before colleges, others before clubs, religious denominations and charity societies. The growing interest manifested in the work is gratifying. Particularly is this so with relation to the religious bodies. Invitations were accepted to address the Methodist Episcopal Conference at Greensburg and the Presbyterian Synod at Frankfort. When I found myself unable to attend the former, Mr. Alexander Johnson kindly consented to fill the appointment. Several denominations in our State have standing committees on the subject of public charities.

In addition to frequent visits of inspection to the State institutions, several inquiries were made into conditions. The result of these inquiries was made known to the head of the institutions. The punishment records at the State Prison and the Woman's Prison were examined. Many of the county institutions have been visited, as will be seen from the above list.

While there is improvement as new jails are built or old ones repaired, there are still a number of bad jails, jails that are a discredit to the counties that own them. In fact it has been said the jail system is out of harmony with our present civilization.

It is a relic of the olden times to which we still cling. It is harmful to those confined in the jails, a menace to society and a disgrace to the State.

There are a number of jails in the State in which the conditions are especially bad. The Clinton County jail, which should be replaced by a new one, as we have several times recommended, is still used. The lack of proper facilities for sex separation, and the ease with which communication is had with prisoners, is illustrated by the stories one hears when he talks with those who are informed about the jail, and by the escape, recently, of some desperate criminals. The jail in Harrison County, because of the bad conditions reported by our Board a few years ago, was improved to the extent of taking one of the rooms in the residence portion for a woman's department, but the rest of the jail remains for the herding of prisoners, foul and unsanitary. The jail in Warren County is simply a cage in the basement of the court house. The jails in Jennings, Floyd, Crawford, Decatur, Owen, Gibson, Greene, Putnam, Switzerland, Porter, Lake, Laporte, White and Madison are among the poorest. An appropriation has been made for a new jail in Gibson County.

The number of jail escapes the past year has attracted attention. Jail escapes depend not so much upon the plan of construction or the strength of the building as upon the care exercised by the officers. There have been escapes recently from some of the best jails of the State, notably Knox and Sullivan counties. From observations made through the several years, it is our candid opinion that most of the jail escapes occur either through carelessness or through lack of proper administration of the jail. All of the better jails have between the rows of cells a prisoners' exercising corridor. This is for the use of prisoners. Around the cells next the wall is the officers' corridor. Into this no prisoner should ever come save for the purpose of cleaning it, and then only under the eye of an officer. Yet inquiry regarding a great majority of the escapes shows that it is the practice to permit prisoners in the officers' corridor. There they communicate with friends on the outside and from them obtain weapons and tools with which to assault the officers or attempt an escape.

The Board of County Commissioners in many counties pays little attention to keeping the jail in repair. In such counties as

Sullivan, Clinton, Fayette and Blackford the jails were rendered unsafe because the locking device was permitted to remain out of repair so that it could not be operated. In other jails, like those at Greencastle, Greensburg, Anderson and Rockville, the locking arrangements have been out of repair for a long time, in some of them for years, and yet the sheriff is expected to keep the prisoners safely. In many jails there are no rules for the conduct of either prisoners or officers. The question of politics enters into the care of jails, too. In one county not long since the sheriff said he was a candidate for re-election and he had to treat the prisoners right, because the votes of themselves and their friends would be needed. His idea of treating prisoners right was to permit them to have their own way, tear up the jail and keep it as untidy as possible.

An agitation is spreading over the State in favor of workhouses. The public is incensed at the idea of keeping a large number of prisoners in idleness in the county jail, but the sentiment does not crystallize into action and nowhere has any result yet been attained. The only workhouse in the State is in Marion County, and it is really only a workhouse in name. Provision should be made for the employment of all the prisoners and in fact for the removal of the institution outside the city. It might be located on a part of the Poor Farm, to good advantage. In the counties of Vanderburgh, St. Joseph, Elkhart, Wayne, Madison and Tippecanoe there has been more or less discussion of the question of a workhouse. Some of the county jails maintain stonepiles, and these when well managed are of considerable assistance in keeping the population of the jail at a low number.

Interest in the work and methods of the juvenile courts continues. The activity of the courts in the larger counties, Marion, Vigo, Allen, Madison and St. Joseph, is rivaled by that in some of the smaller counties, notably Wayne, Delaware, Adams and Hamilton. A number of our judges are coming to regard this as a most useful and important part of their work. There exists a feeling that three or four of the larger counties ought, like Marion, to have a separate court, because the circuit judges are not able to give the necessary attention to the work among the children. The Marion County Court is the first to establish a detention home. A building located at No. 238 West New York Street,

Indianapolis, has been rented and will be used for a few years until it is definitely determined what is the best plan to adopt for erecting one.

Perhaps nothing has been of more help in the improvement in conditions in the county poor asylums than the law enacted a few years ago, fixing the term of the superintendents. This was set at two years, but four would have been better. This arrangement did away with the custom in vogue in many counties by which each member of the Board of County Commissioners in turn named the superintendent for one year. Under that system conditions were steadily growing worse. Under the present law a very large percentage of the poor asylum superintendents are re-elected. In all of the counties the old habit of farming out the asylum inmates at an agreed price per head has been abandoned, though in a number it is still the practice to award the superintendency of the asylum to the lowest bidder. In a number of counties the superintendent's salary is less than \$1 a day. However, the majority of the counties have passed this stage of development and are willing to pay a fair price for the services of a man and his wife.

There has been further improvement in the erection of new buildings in a number of counties and in better administration in others. Work has begun on the new poor asylum in Pike County. The new \$25,000 asylum in Porter County was completed about a month ago. Complaint of the building was made to the commissioners, and at their request a representative of this Board visited and inspected the building, and made a written report of it, which was published in the papers and relieved the officials of all further criticism. This report spoke of the good plans, excellent construction and careful supervision of the work, and stated that Porter County had procured the best plans and obtained the best built poor asylum for the amount of money expended in recent years in any county.

The new fire-proof asylum in St. Joseph County is almost completed, and it will probably be occupied soon after the beginning of the year. The commissioners sold the former farm and purchased less expensive land a little further from the city. Exactly the opposite plan was pursued in Allen County. The asylum there stands on land which is partially surrounded by the city's growth

and is very valuable. In a few years it will be too valuable for asylum purposes. Yet the county, contrary to our advice, is repairing the present building and has already spent \$50,000 for that purpose. The building will be greatly improved, but not such as the county might have had with the money thus spent and what the old farm would have sold for.

Among the counties in which there are improved conditions may be mentioned Wells, Perry, Laporte, Pulaski, Montgomery, Rush, Decatur, Franklin, Vermillion, Sullivan and Henry. Several others are planning forward steps for the coming year. Appropriations have been made for new poor asylums in Clark and Parke counties, for a new additional building in Howard County, and for preliminary plans for a new building in White County.

The Howard County Poor Asylum, which was found so bad last winter, has again been criticised, this time by the Grand Jury, and the result will be a small new building at once and possibly, eventually, a new structure. The poor asylum in Tipton County is, if anything, worse than that in Howard County. Daviess county's asylum is almost as bad as either one. The custodial building for men in Blackford County is a reproach to the county.

In some places, owing to incapacity, the superintendents let the inmates do as they please. They wander about the country, are not required to keep either themselves or their rooms clean and tidy, and they do very little work. Elsewhere the superintendents seek to enforce discipline by harsh measures. They do not understand that what is needed is firmness and kindness, infinite patience and tact. The former superintendent of the Monroe County Poor Asylum whipped the insane inmates with a horsewhip until I stopped him. The superintendent of the asylum in Porter County was recently discharged by the Board of County Commissioners for whipping inmates with a buggy whip and a strap. One of the inmates, a chronic insane man, was struck over the face with a buckle and his face marked.

Activity in the way of new hospitals continues. An appropriation of \$5,500 has been made by the County Council of Howard County for such an institution at the poor asylum, and I have been advised that an appropriation of \$15,000 for a hospital has been made by the Knox County Council. The Indianapolis City

Hospital is undergoing extensive repairs, which will add greatly to both its appearance and its usefulness. Conditions there have greatly improved in the past two or three years. The new hospital in Bloomington received its first patient December 4, 1905. The Sisters of Mercy have remodeled the Mercy Hospital in Columbus and it is now said to be one of the best equipped institutions of its kind in southern Indiana. Considerable progress has been made in the institution being erected in Indianapolis by the Methodist Episcopal Church.

The Indianapolis Humane Society has been reorganized. Two institutions in the same city which have been doing a somewhat similar work, united during the year under the name of the Indiana Door of Hope, and has been soliciting throughout the State for support from the county treasuries.

A tuberculosis exhibition was held in Indianapolis, March 5-11, 1906, under the auspices of the National Association for the Study and Prevention of Tuberculosis. The exhibit consisted of instructive charts, photographs, plans of buildings, etc., and these, with the addresses on different phases of the subject which were given afternoon and evening, had quite an educational effect.

There is a growing disposition to establish new orphans' homes. Some of these are by religious denominations. The Baptist Church has recently established one at Zionsville as a result of a contribution. The Northern Indiana Conference of the Methodist Church has had an offer of \$50,000 to start one at Warren, Huntington County. There is still talk of new homes in Greene and Elkhart counties. There is some talk of the Knights of Pythias and other organizations establishing orphanages. One is at a loss to understand this movement for children's institutions. There is now more orphan-home capacity in the State than there are children. The forty-one institutions caring for dependent children at the present time, not counting the Soldiers' and Sailors' Orphans' Home, have a total capacity of 2,833, while the number of inmates on October 31, 1906, was 1,747. With the exception of a few of these, such as the homes in Allen, Marion, Marshall and a few other counties, the population has been decreasing the past ten years, and a dozen or more of the homes have been abandoned and closed. Others are being maintained with

practically no children in them. Among these may be mentioned Boone, Franklin, Clay, Decatur, Clark, Johnson and Lagrange, in which the number of children ranges from four to twelve.

The Cass County Orphans' Home, which was destroyed by fire, is being rebuilt. The Delaware County Orphans' Home Association sold its institution and purchased a farm west of Muncie. The farm house on the land is being remodeled for the Association's use. No new orphanages for the care of public wards have been established during the year. On the contrary, the home near Greencastle, Putnam County, has been relieved of the public wards it had, and the three or four children in its care are being maintained privately by the association.

The Home operated jointly by Henry and Rush counties, which was added to the list of public orphanages last year, has had the effect predicted, that of increasing the number of children dependent on each of the counties. The management is now seeking increased compensation. A private orphanage is being operated in Brown County, though it is not legally incorporated. Such institutions are irresponsible and usually do much more harm than good.

With the appointment of Boards of Children's Guardians in Adams, Benton, Brown, Jackson, Sullivan and Vermillion counties during the past year, there are now forty-one such Boards in the State. Excellent work is being done by many of these Boards, but some do not seem to understand their functions. The purpose of the Board is not, in the first instance, to take children, but to act as a threat in the name of the court and to remove the children when nothing else can be done. The ordinary dependent child comes under the jurisdiction of the township trustee.

Boards of County Charities have been appointed in Parke and Dubois counties within the past twelve months, making a total of seventy-two such boards appointed to date. However, five of these boards—Brown, Kosciusko, Porter, Posey and Shelby—are not active. Practically all the others report regularly. They are doing good work and are very helpful in many ways in their respective counties.

The Charity Organization Society at Lafayette was started late last winter and has made a good beginning. The Secretary has returned to work the past fall and the outlook is even more en-

couraging than last year. The Secretary of the Anderson Charity Organization Society has also returned to her work and the outlook there is better. There has been talk of organizing such societies in Brazil and Greensburg.

The State Truancy Board is organized the same as last year, with your Secretary as President, and Mr. C. N. Kendall, representing the State Board of Education, as Secretary. Correspondence with the different truant officers and the compilation of their annual reports require considerable time.

Many of the township trustees seem to be very conscientious in their work and desirous not only of following the law, but of doing all they can to prevent pauperism and to improve social conditions. Much time is taken by your Secretary, advising with them regarding their work. In the townships containing the cities of Vincennes and Crawfordsville, which have attained the reputation of being the two "black spots" on the poor relief map of Indiana, there has been a commendable effort to reduce the amount of aid given. The two trustees are co-operating with the various charitable agencies in their respective communities and have succeeded in bringing about a much better condition.

At the request of the State Board of Education, several of the State institutions co-operated in exhibits of their educational work at the State Fair. These include the Reformatory, the Boys' School, the Industrial School for Girls, the Soldiers' and Sailors' Orphans' Home, the Institution for the Blind and the School for Feeble-Minded Youth. This proved a very attractive feature at the Fair. A large number of persons were not only interested, but very much surprised at the kind and quality of the work being done at our State institutions. It would be a valuable thing if a building should be erected, to be used for educational exhibits, and a large part of the space so provided could be used for showing the work of the various State institutions.

There is a continuing and growing interest in many phases of charitable work. This is represented in the cities by charity organization societies and their co-operating agencies, in the State at large by the interest in the various religious denominations and by the large number of churches which unite in observing the last Sunday in October of each year as Prison Sunday. There is an interest in our work also in other states and countries. From

them come requests for reports and copies of laws and for information regarding the operations of our institutions. The National Conference of Charities and Correction, at Philadelphia, adopted the form of financial and statistical report used by our Board and asked all State institutions throughout the country to use this form in printing one page for each year in their reports. Several persons from other States have visited our office for the purpose of studying our methods.

There is a continued growth in our library, which is perhaps now the most important library on charity subjects in this State. It is frequently consulted by persons who are looking up some special subject.

The usual work of the office has been carried on. The reports have been studied, the records compiled, data entered in the registration, the regular quarterly Bulletin and their supplements issued, Prison Sunday literature distributed. There have been a number of changes in the office force in the past year, but notwithstanding that fact, we have accomplished about as much as usual. The present office force is as follows: Miss Laura Greely, Chief Clerk; Misses Moffet Richards, Mabel Whisner, Anna L. Vesey and Winifred M. Ryan, Clerks. No changes have occurred in the State Agency. The agents are Perry N. Hiser, Mark A. Smith, Miss Mary Carmichael and Miss Leila M. Thomas. I wish to thank all for their co-operation.

In closing this report permit me to express my grateful acknowledgment to the individual members of the Board for their uniform kindness and support.

Respectfully,

AMOS W. BUTLER, Secretary.

COMPULSORY EDUCATION.

Under the compulsory school attendance law (enacted first in 1897 and revised and re-enacted by the Legislature of 1901) the Secretary of the Board of State Charities is ex-officio a member of the State Board of Truancy, and as the Board is at present organized serves as its president. The State Board of Education has been represented the past year by Mr. C. N. Kendall, Superintendent of the Indianapolis Public Schools. The law may be found in Chapter 209 of the Acts of 1901.

Each of the 92 counties in the State is entitled to a truant officer, and cities of certain population are permitted to employ additional officers. For the year 1905-1906 there were 111 such officials and all have made their annual reports to the State Board of Truancy as required by law. During the school year they spent a total of 16,357 days in service, made 73,194 visits and brought 23,297 children into school. It will be interesting to know that the average number of children brought into school annually by the truant officers from 1898 to 1906 inclusive has been 23,482.

Under Section 6 of the law the trustee of the township or the Board of School Commissioners of a city, as the case may be, is required to supply necessary books and clothing for any child whose parents or guardians would otherwise be unable to send him to school. For the last school year aid was furnished, according to the reports, to 7,548 children at a cost of \$21,267.88, or \$2.82 each. These figures are known to be incomplete, from the fact that the truant officers report considerable difficulty in obtaining any data on the number of children aided, or the expenditure for such purposes. In a few instances the figures given are estimated and one or two officers report failure to secure any information whatever. It is unfortunate that the law's provisions in this particular are not more generally understood and enforced. The trustee of a township or the Board of School Commissioners is expected to furnish whatever assistance is necessary and the bills, upon the certificate of such officers, are allowed and paid by the County Commissioners. The bills should be accompanied by a

list of the children aided, to be placed on file in the Auditor's office. It is customary for the County Commissioners to have the bills paid from the Poor Fund of the respective townships, but that should not be done without furnishing the trustees with all the facts necessary to enable them to make proper record of the expenditures from such funds. If this were done the truant officers could readily make the reports required of them. Another point in this connection is that if more than temporary aid is required the County Commissioners must provide it; as a rule, however, nothing more than temporary aid is necessary.

Considering the large number of children brought into school by the truant officers, the number of prosecutions during 1905-1906 is very small. There were but 261. Of these, 232 were successful; 27 were unsuccessful and two were still pending when the reports were made.

The total cost of administering the law amounted to \$53,145.98—\$31,878.10 for salaries of officers and \$21,267.88 for assistance to children. This was an average of \$2.28 for each child brought into school.

For convenience the figures given are repeated below in tabulated form:

STATISTICS, 1905-1906.

Number of truant officers.....		111
Number of days spent in the service.....		16,357
Number of visits made.....		73,194
Number of pupils brought into school—		
To public schools.....	22,298	
To private schools.....	999	
		23,297
Number of children aided—		
To attend public schools.....	7,438	
To attend private schools.....	110	
		7,548
Number of prosecutions—		
Successful	232	
Unsuccessful	27	
Pending	2	
		261
Cost of administering the law—		
Salaries to truant officers.....	\$31,878 10	
Assistance to children.....	21,267 88	
		\$53,145 98
Cost per capita for children brought into school.....		\$2 28
Cost per capita of assistance given.....		2 82

THE COUNTY POOR ASYLUMS.

The county poor asylum population shows little change from year to year. The census of August 31, 1906, indicates 3,124 inmates as compared with 3,115 last year. This number is equal to 12.4 in every 10,000 of the State's population, according to the census of 1900. If the exact number of inhabitants of the State at the present time was available, the proportion of poor asylum inmates would be slightly different.

It may be interesting to know that in the counties of Bartholomew, Blackford, Boone, Clay, Elkhart, Lawrence, Pulaski and Scott the proportion of inmates to the population of the county is precisely the same as for the State at large—twelve in every 10,000. The two extremes are found in the counties showing five inmates to every 10,000 inhabitants (Brown, Starke, Sullivan and Warrick) and in Switzerland County which has the highest record in the State, 26 in every 10,000. There are thirty counties in which the proportion is less than 10 in every 10,000; 58 in which it is between 10 and 20, and four (Fayette, Washington, Vermilion and Switzerland) in which it is between 20 and 27. A greater part of the highest proportions are found in the district from which the Central Hospital for the Insane receives its patients, and as this hospital has the power to return chronic patients to the counties, the poor asylums in that district have a large number of insane inmates.

Classified by age, 27 or nine-tenths of one per cent. of the inmates were children under seventeen years of age; 1,530 or 48.9 per cent. were between the ages of 17 and 60 years; 1,567 or 50.2 per cent. were over 60 years of age. The facts in regard to the age of inmates are set forth more fully in Table No. 1, which follows. The men exceed the women in numbers by 936, there being 2,030 men and 1,094 women.

The mental and physical condition of the inmates is shown in the second of the accompanying tables. The large number of insane, feeble-minded and epileptic is noticeable. Due allowance

must be made for the errors of poor asylum superintendents in distinguishing between insanity, feeble-mindedness and senility. Of the feeble-minded the reports show 486 men and 426 women, total 912. Of the insane there are 371 men and 179 women, total 550. Of the epileptic there are 139 men and 109 women, total 248. Sixty of the epileptic are also insane and 115 are feeble-minded, leaving 73 with no marked mental deficiency. In the three classes of neurotic diseases, therefore, there are 908 men and 627 women, total 1,535, or 49 per cent. of the whole number of inmates.

If a total of the different classes in Table No. 2 is made it will be found greater than the total number of inmates. This is due to the fact that it is necessary to classify certain of the inmates under more than one heading; such, for example, as those who may be both blind and feeble-minded, or insane and epileptic. So far as it has been possible to do so, no inmate has been counted twice, the more serious defect guiding in the classification.

POOR ASYLUMS CENSUS, AUGUST 31, 1906.

	Males.	Females.	Total.
Under three years.....	5	7	12
Three and under seventeen.....	9	6	15
Seventeen and under thirty.....	129	72	201
Thirty and under forty-five.....	325	214	539
Forty-five and under sixty.....	530	260	790
Sixty and under seventy-five.....	664	310	974
Seventy-five and over.....	368	225	593

THE COUNTY JAILS.

The Board of State Charities has received the usual monthly reports from each sheriff in the State during the past year. These have had careful study and the tabulated results will be found in the tables on subsequent pages. The figures include the ninety-two jails and the Marion County workhouse.

In the first of these tables is shown the number of jail prisoners on the last day of the fiscal year, October 31st. The total, 1,062, is an increase of 173 over the number of inmates on the same day a year ago, and is greater by 113 than the highest number ever reported to our office for the same day of the year. The average number of jail inmates on October 31st for a number of years past has been a little over 800.

The usual proportion of male and female inmates obtains. The men and boys number 979, the women and girls 83. Two hundred and eighty-eight men and boys and 12 women and girls were awaiting trial; 630 males and 66 females were serving sentences or laying out fines; 42 insane men and 3 insane women were being held for safekeeping or for transfer to the State hospitals; 4 men were tramps, and the remaining 15 males and 2 females were in the jails for various reasons.

The small number of inmates in the majority of the jails is striking. Thirteen were empty; in forty counties the number of prisoners was less than five; in twenty-two counties, from five to ten; in eight counties, from ten to twenty; in nine counties, over 20. Marion County naturally had the largest number: 186 in the jail and 213 in the workhouse. Since more than thirty thousand persons are admitted to the jails annually, it is evident that the majority of them remain a very short time.

Table No. 2 shows the whole number of persons admitted to the jails during the twelve months ending October 31, 1906, to have been 33,316, of whom 30,877 were men and boys and 2,439 were women and girls. Of these, 14,937 men, 1,249 boys under eighteen years of age, 426 women and 47 girls under eighteen years of age served sentence or laid out fines. These make a total of 16,659, or almost one-half of the whole number admitted. There were 604 insane males and 144 insane females, a total of 748, confined during the year; 2,921 tramps, of whom all but 51 were

men, were given lodging; the remaining 12,988 inmates, of whom 12,040 were males and 948 were females, include those who were released after trial as not guilty, those held as witnesses, those who awaited transfer to other institutions, etc.

The number of women serving sentence in the county jails on the last day of each quarter was as follows: On January 31st there were 99, 52 on April 30th, 51 on July 31st and 66 on October 31st. The average of these four days is 67. While it can not be concluded that this was the average for the year, the figures given have a certain value as at least approximating the correct average.

Probably the most striking fact noted in the reports of the sheriffs is the large number of persons admitted to the jails on account of vagrancy and intoxication. These two causes alone were responsible for the presence of 16,589 jail inmates during the past year, a little less than fifty per cent. of the whole number received. The figures for each county will be found in Table No. 3.

Of the vagrants there were 3,379, all but 61 of whom were men and boys. This total includes both those who were given lodging, as noted in Table No. 2, and those who were arrested and placed in jail by the regular process of law. Their expense to the different counties in the way of in and out fees and board alone amounted to \$5,749.41, and there were of course other expenses in the case of those who were arrested and tried. It is unfortunate that any tramps are received at the jails unless arrested, but it is a fact that many are admitted on their own application and lodged over night. One or possibly two meals are given them and then they are released, the county to be charged with two full days' board at forty cents each, and the usual in and out fees of twenty-five cents each. Attention has frequently been called to this custom and its illegality pointed out. Improvement has followed publicity in some counties, but the custom continues in others.

It was pointed out last year that Vigo County had admitted 823 vagrants to its jail during the twelve months. This year's record shows a commendable reduction to 469, but that number is still too large. Vigo and Tippecanoe seem to vie with each other for the record of keeping a greater number of tramps than any other jail in the State. In 1904 Tippecanoe County had the highest number, 1,040; in 1905, Vigo County, 823; this year Tippecanoe again holds the record, with 602. The tendency is toward a de-

crease, but it is hoped these two counties will make still greater effort the coming year to redeem their reputation in this particular. Of the whole number of tramps admitted to the jails in 1906, 1,071 were reported from Vigo and Tippecanoe, 2,308 from the remaining ninety counties. The average for the two counties is 535 each; for the other ninety counties, 25 each. Of the two counties, Tippecanoe is the greater offender. Its annual average of tramps for the past five years is 705; of Vigo County, 364.

Intemperance causes more jail imprisonments than any other one cause. During the year ending October 31, 1906, 13,210 persons, of whom 535 were women, were sent to jail because of intoxication. The cost to the counties for fees and board for these 13,210 persons amounted to \$43,117.78. Marion County, being the most populous in the State, shows the greatest number of persons admitted to the jail for drunkenness, 1,514. Vigo County comes next with 1,464. Eight other counties which had a large number of jail inmates for this cause are as follows: Grant, 515; St. Joseph, 482; Delaware, 470; Tippecanoe, 404; Miami, 374; Madison, 366; Cass, 363; Putnam, 323. In all the other counties of the State the number fell below 300. In thirty-four counties the number of such imprisonments was less than fifty.

A striking thing in connection with the above figures is the record of Miami and Putnam counties. We naturally expect to find the highest number of jail inmates in the most populous counties. There are twenty-seven counties in the State having a greater population than Miami, but only six which had a larger number of jail inmates on account of drunkenness. Putnam County is fifty-first among the counties in point of population, but there were only nine which had more jail inmates for drunkenness. The jail in Putnam County, too, is quite unfit for the confinement of prisoners.

The following tabulation of the jail inmates for vagrancy and intoxication, classified by age, will be found instructive.

Age.	Vagrancy.	Intoxication.	Total.
Sixteen and under.....	61	39	100
Seventeen and under 35.....	1,901	6,035	7,936
Thirty-six and under 50.....	837	4,369	5,206

DEPENDENT CHILDREN.

- One of the most important questions to be considered in the field of charities in our State is the problem of the dependent and neglected children. From them come largely the pauper and the criminal. The wisest way of caring for them will be that which is best for their own welfare and best for the State. Prevention of pauperism and crime is better and easier than their attempted cure. Indiana has many good laws for unfortunate childhood. These laws should be better understood and better enforced. One of the most helpful of these is the dependent children law of 1897, the theory of which is that every normal child should have a good family home found for it. The Orphans' Home has its proper place as a temporary refuge, a clearing house, where a child should be kept just long enough to secure for it a home in a good family.

Before our State was prosperous and had many homes to offer to homeless children, the idea was that children should be cared for in Orphans' Homes until they were almost grown. But the result of years of experience has convinced those best informed in the work that children brought up in institutions become institutionalized; they lose so many of their characteristics and so much in the way of individual development that they are far more likely to become dependents later on. Individual training in a family home is that which is best suited to the needs of a normal child. This is what the best methods propose. The old idea, however, lingers in some institutions, and its tendency, especially in those supported on the per capita plan, is to receive as many children as possible and keep them as long as possible. Under such an arrangement the children may be kept for the benefit of the home instead of the home existing for the benefit of the children.

Indiana has forty orphans' homes caring for public wards. These institutions, and the boards of children's guardians which

board their wards temporarily at one place and another, had at the close of the year a total of 1,747 children, 48 more than were on public support the same day a year ago. The reports indicate that 1,039 children not previously public wards were received during the year. This is an increase of 72 over the same set of figures for 1905, which in turn was 32 greater than for 1904. These statistics indicate the tendency toward an increase in the number of juvenile public dependents. This would naturally be expected with the growth of the State's population, but another reason is that the orphans' home associations are less active in placing children than they should be. Their reports indicate that the number of placements into family homes during the past twelve months is equal to but 25 per cent. of the whole number of children handled in the same period. In 1905 it was equal to 28 per cent., in 1904 to 26 per cent., in 1903 and 1902, respectively, 29 per cent. A considerable number of these placements were unsuccessful, the children later being returned to public support.

Several of the associations are to be commended for what they accomplish; others are doing very little work. Some have stated frankly that it is necessary to have a certain number of children in the home to make it self-supporting.

Under the dependent children law of 1897 there has been much improvement in the child-saving work of the State. There is more general interest, more frequent inspection of the orphans' homes, more frequent visitation of the children placed. The work of the local agencies has been supervised; the importation of dependent children from other States has been largely stopped; the average length of time children remained on public support, not including the wards of the State Soldiers' and Sailors' Orphans' Home, has been reduced from thirty-six months in 1896 to twenty-six months in 1906. In the State Orphans' Home, where little effort is made to place the children, the average length of stay is 51.9 months. The agents of the Board of State Charities, in the nine and one-half years since the department was established, have placed 1,542 children in family homes, and of these 1,173, or 76 per cent., are now off public support. The maintenance of these 1,173 children in orphans' homes at the legal per diem of twenty-

five cents, would have been \$293.25 a day, while the work of the State Agency has cost the State less than \$25 a day.

At one time in the history of Indiana, 700 children were found in the various county poor asylums. A census taken by the Board of State Charities on August 31, 1891, discovered 432 children in such institutions; on the same day in 1893 there were 402. For the next two or three years the figures obtained were not satisfactory, but on August 31, 1896, an actual count of poor asylum inmates showed a child population of these institutions numbering 266. The legislative enactment of 1897, regulating the care of dependent children, contained a clause prohibiting the retention of any one between the ages of three and seventeen years in a county poor asylum. This law had an immediate effect in removing children from the vicious influences of such institutions, and on October 31, 1906, there were but 46 present. Seventeen of these were babies. In 1891 the children formed 13 per cent. of the poor asylum population; in 1906, 1 per cent.

With all that has been done, and in the face of the great improvement in conditions, one can not study the figures in the report of the State Agent, on subsequent pages, without being impressed with the fact that Indiana is maintaining many more dependent children than she should, and that the burden upon the taxpayers is much greater than is really necessary.

Let us compare Indiana with the States of Michigan, Minnesota and Wisconsin, each of which has one institution for the care of children who are public wards. The following figures are taken from reports published in the four States and refer to public institutions:

CHILDREN SUPPORTED AT PUBLIC EXPENSE.

	Indiana.	Michigan.	Minnesota.	Wisconsin.
Number of Inmates—				
State public school.....		155	194	155
Poor asylums	37		14	
S. & S. O. H.....	535			
Orphans' homes	1,699			
Total	2,271	155	208	155
Average per 100,000 of population	90.2	6.4	11.8	7.5
Ages admitted	Under 16	Under 12	Under 15	Under 14
Maintenance, 1904	\$276,699	\$37,065	\$42,947	\$41,233

The criticism may well be made that in States which have a large number of public institutions for children, there is a less number of private orphanages. To meet this the following figures are reprinted from the Special Report on Benevolent Institutions of the United States Bureau of the Census, 1905. Public, private and ecclesiastical institutions for children are included. The figures need no comment:

ORPHANAGES AND CHILDREN'S HOMES.

(From Special Report on Benevolent Institutions, U. S. Bureau of the Census, 1905.)

	Indiana.	Michigan.	Minnesota.	Wisconsin.
Population of State, 1900.....	2,516,462	2,420,982	1,751,394	2,069,042
Number of institutions.....	50	23	16	15
Inmates, December 31, 1904....	2,934	1,669	1,220	1,283
Number of paid employes.....	373	166	142	168
Annual subsidies from public funds, 1903	\$65,868	\$3,860	\$497	\$1,740
Income from pay inmates, 1903	8,613	19,679	7,949	15,843
Cost of maintenance, 1903.....	320,036	128,217	130,822	126,130
Number of inmates per 100,000 of population	110.1	65.6	62.4	57.2
Rank according to number of inmates, December 31, 1904	7	13	17	15
Rank according to number of inmates per 100,000.....	16	22	24	27

The conscientious inquirer will be impressed with the feeling that a better system than that which exists might be devised for our State. More centralization with regard to the care of dependent children, a more definite placing of responsibility, and more active efforts in placing children in family homes would, without doubt, lead to a reduction in the number of children supported, a lessening of the public expense, and better work for the children. There is so much to be done that the possibilities for the future are great.

STATE AGENT'S REPORT.

Amos W. Butler, Secretary:

The work of this department for the year just closed has been very like that of preceding years in its nature and amount. Orphans' homes have been visited and inspected; family homes have been investigated and children placed in them, and children already placed in family homes have been visited. These, in brief, are the lines of work that have commanded our attention and employed our time since our last report.

I. VISITS TO ORPHANS' HOMES.

Some attempt has been made during visits to orphans' homes to ascertain the cause or causes of dependency among the children that constitute the population of these institutions, but the facts known and recorded about the inmates are so meager that any conclusion upon the subject was rendered impossible. It was learned, however, that these children come from parents or guardians that were either unwilling, unfit or unable to give them reasonably proper care. These are but occasions, not causes, of dependency. Causes would show the ground of the inability, the nature of the unfitness, and the excuses for the unwillingness to provide such care. A more careful investigation should be made of applicants for dependency, as to the cause of such dependency, at or before the time they are admitted to public care. The lack of such investigation constitutes one of the State's weakest points in her care of dependent children.

It is becoming apparent that each year more abnormal children are being admitted to the care of orphans' homes; children of different phases and degrees of physical, mental and moral degeneracy. This is true to such an extent that matrons are saying: "What is to become of such children? They do not belong here;" or, "I am supposed to care for placeable children, not defectives and degenerates, such as some I have here." The extent of abnormality among the orphans' home population is not clearly known, for the same reason that the cause of child dependency

is not known: it has not been studied. It is time that the actual nature of the present population of the orphans' homes be given serious thought, so that the proper means for meeting the conditions may be devised. The present inadequate knowledge is another of the State's defects in the care of dependent children.

Some matters of interest aside from the daily routine have occurred in the orphans' homes during the last year.

In St. Joseph County, the Children's Aid Society has begun the construction of a three-story brick building, a little distance from the present buildings. It is to be modern in every way, with a capacity for the care of 150 children. This new building when completed, some time in April of 1907, will take the place of the two buildings now used by the society.

The orphans' home building in Cass County, which was greatly improved last year, was destroyed by fire in April, 1906. The children are being cared for temporarily at the German Baptist Orphans' Home, at Mexico, Indiana.

Putnam County has transferred the care of its children from the Mollie Clark Orphans' Home to the Indianapolis Orphans' Home and the Children's Home Society.

The Indiana Children's Home Society has made some needed improvements in its receiving home at Westfield, in both the buildings and grounds, which have added to its convenience and appearance.

At White's Institute in Wabash County the convenience and capacity have been increased by raising the cottage for larger boys. The sub-basement thus provided has been fitted up for bathrooms and a gymnasium.

A second large, two-story brick cottage has been completed and occupied during the year by the I. O. O. F. Orphans' Home and Home for Aged at Greensburg, Decatur County.

In Marshall County the Julia E. Work Training School has been making improvements which have added to its completeness and convenience. Of these the new two-room school building is perhaps the most important. This institution suffered during the year in the loss, by fire, of one of its large farm barns and contents. The management feels there was some recompense in the opportunity afforded to test the efficiency of the fire drill there maintained.

As usual there have been some changes in the personnel of the matrons among the orphans' homes of the State.

Mrs. J. W. McMullen, matron of the Montgomery County Home, at Crawfordsville, resigned because of failing health, and Mrs. J. W. Mastin was appointed. There have been two changes in the Clay County Orphans' Home. Mrs. Myra McCulloch, who has been its head for so many years, resigned to be succeeded by Mrs. Nanny Bennett, who also resigned. Mrs. Elsie Eagleton was then placed in charge. Miss Lottie Land, who for several years was connected with the Clark County Orphans' Home, as assistant matron and as matron, resigned, to be married, and was succeeded by Mrs. Cora Seera. Other changes may be noted in the Orphans' Home Directory on another page of this report.

II. PLACING CHILDREN.

Greater care than ever has been exercised the past year in the choice of family homes offered and the selection of children to be placed in the homes chosen. When, from an "outside" investigation, a home is thought desirable for a child, the policy is to send an agent into the home before the child is placed therein. The purpose is threefold:

1. To explain in conversation what is expected of the family as guardians of a child under the indenture contract.
2. To get acquainted personally with the family, so that subsequent visits to the child will have something of a human touch about them.
3. Justice to any child that must make its home among strangers.

Each of these reasons is a text for a theme, but to the person who is experienced in this work they are self-evident, and need no elaboration.

The handicap that the placing-out system has in this State is the two weak points mentioned above. The orphans' homes are dealing with many children who should be cared for by their own parents, or relatives, or by some private agency; also with defective and degenerate children who are subjects for permanent public care, and who can not be reached by the placing-out system.

When the point is reached where proper steps are taken to determine (1) which children shall receive public support and (2) which of the children on public support shall receive care and treatment in institutions and which shall be placed in private families, then a placing-out system, with the purposes for which this Agency was intended, can prevail.

III. VISITATION OF CHILDREN.

A continuous effort has been put forth throughout the year properly to look after placed-out children coming under the State's supervision.

Owing to conditions under which some of the placing-out agencies of the State do their work and the manner of doing it by others, it would be anticipating much to expect anything like systematic visitation of children by the local placing-out agencies. Sufficient and proper visitation has always been the stumbling-block for placing-out agencies. It always has been and probably always will be one of its weakest points. In order to cure this defect as far as possible, the State Agency has gradually been increasing this phase of its work, until now it visits not only the children it places out, but also those placed out by all other agencies in the State that have to do with dependent children. It not only needs to increase the frequency of these visits, but it should also increase its visiting list to include the children returned to their parents. The theory of the dependent children law is that when a child is surrendered to public care its guardianship is vested in some representative of the State, and a return to parents does not necessarily relieve the guardian of his duty to the child thus returned.

There are from 350 to 400 children returned annually to their parents out of an orphan home population of 1,500 to 1,700. This would seem to imply that the public is either giving unwarranted temporary aid in institutions, or by returning these children to their parents without supervision is careless in its trust. This method is thought by some to be another objectionable feature of our present system of care for dependent children.

TABLES.

The tables which follow are based on the monthly reports of the orphans' homes and the agent's reports.

Table I, showing the work of the agents for the year ending October 31, 1906. The four agents have spent a total of 872 $\frac{1}{4}$ days in the field during the year, visiting children, investigating applications, placing children in homes, inspecting orphan asylums and conferring with public officials. Sixteen hundred and ninety-five children were visited, and of these, 1,294, or 76 per cent., were found doing well; the condition and surroundings of 237, or 14 per cent., were less satisfactory, yet not of such a nature as to warrant removal of the children; the remaining 164, or 10 per cent., were found doing poorly, and proper action was taken in each case looking to the return of the child to the placing agency. One hundred and eighty-six other visits were made to addresses given, without finding the children reported. One hundred and eighty-two children were placed in homes during the twelve months, 141 being children who had not previously been placed by the agents and 41 being transfers. Forty-one children were returned to counties. The applications investigated numbered 380, and all but 94 of these were approved. The visits to the various orphan asylums numbered 215, to county poor asylums 10, to boards of county commissioners 10. Special items of work not coming under any of the classifications given numbered 333. These included investigations into complaints, reports of alleged mistreatment, visits to citizens and officials interested in the work, etc.

The above constitutes the field work of the department, and its cost, including the salaries of the agents while engaged therein, amounted to \$5,713.33. The balance of the legislative appropriation for the department, amounting to \$2,286.67, shows the cost of the office work, stationery, postage, etc. The traveling expenses of children placed, paid by the counties, amounted to \$372.40, making the total traveling cost of the agency \$6,085.73.

Table II, showing the placement of children in family homes by the State Agency since the department was created April 1, 1897. In addition to visiting children in family homes, and in a general way supervising the work of the orphans' home associations, the

agents have found time, in the nine and one-half years, to place 1,542 children, and it is gratifying to know that 1,173, or 76 per cent. of them have remained off public support. The results achieved are seen in the following statement:

Total number of children received.....	1,542
In family homes subject to visitation.....	690
In family homes, adopted.....	29
Over age and self-supporting.....	231
Ran away	114
Married	20
Died	22
With parents	57
In other institutions.....	10
	1,173
Returned to counties.....	369
	1,542

In this table will be found also the figures indicating the number of children supported by each county on October 31, 1906. The significant thing in connection with these figures, as has been pointed out in previous reports, is that those counties which have orphans' homes within their borders have the greatest number of dependent children.

Table III shows the movement of children in the orphans' homes supported in whole or in part at public expense. At the beginning of the year there were 1,699 public wards in the different orphans' homes in the State. In the twelve months just closed 1,039 children not previously on public support have been received, and 308 former wards have been readmitted, making a total of 3,046 children handled during the year. These are to be accounted for as follows:

In family homes:

Placed by the State agents.....	120
Placed by the associations.....	562

682

Returned to parents:

By the State agents.....	1
By the associations.....	414

415

Transferred to other institutions.....	76
In family homes, adopted.....	13
Over age and self-supporting.....	37
Ran away or kidnapped.....	27
Died	44
	1,299
In orphans' homes, October 31, 1906.....	1,747
	3,046

Table IV shows the work of the orphans' home associations during the year and the children in family homes subject to visitation. In this table there has been considered the activity of the different associations in the matter of placing children in family homes. The number of children restored to parents is also given. It will be found that some of the associations have been quite active and that others did very little, while some have returned more children to parents than were placed in family homes. Among the homes which did little or no placing will be found those which make a specialty of caring for defectives and non-placeable children. Taking into consideration the whole number of children handled by the different orphans' homes during the year, as shown by Table III, it is found that the associations placed but 25 per cent. of their children in homes. Not all so placed remained off public support, it having been found necessary in some cases to return the children to the asylum. Four hundred and sixty-three children were restored to parents during the year. This is equal to 15 per cent. of the whole number in orphans' homes in the twelve months.

The second part of Table IV indicates the number of children in family homes, subject to visitation, without reference to the time they were placed. Of the total number, 3,157, the associations placed 2,350, the State Agents 690, and other agencies 117.

Table V, showing the population of the forty orphans' homes supported in whole or in part by public funds, also the children boarded in private families by the Dekalb and Blackford County Boards of Children's Guardians. On October 31, 1906, there were 1,121 boys and 626 girls on public support in the different counties, an increase of 48 over the number of public wards on the same day one year ago. Some of the homes will be found to

have a small number of children, such as Boone with 4, Clay and Decatur with 12 each, Franklin and Jefferson with 11 each, Johnson with 10, Lagrange with 5 and Warriek with 7. On the other hand the Allen County Home has 58 children, that in Grant County 71, the Indianapolis Orphans' Asylum 116, the Indianapolis Home for Friendless Colored Children 62, the German Protestant Orphans' Home in Indianapolis 65, the Julia E. Work Training School in Marshall County 258, the German Baptist Orphans' Home at Mexico 75, the Vigo County Board of Children's Guardians 87, White's Manual Labor Institute at Wabash 170. This table indicates also that only 119, or 7 per cent., of the children in orphans' homes are reported as full orphans, while 664, or 38 per cent., are reported as having one parent living, and in the case of 964, or 55 per cent., it is assumed in the absence of any information to the contrary, that both parents are living. The exact facts would probably modify these figures to a certain extent, though it is well known that the orphans' home population would be decidedly less were it not that too many parents shift to the public the responsibilities they should themselves bear.

The age of children in the orphans' homes is also given in this table. There were 171 under five years of age, 683 from five to ten years, and 893 ten years and over.

Table VI shows the number of children in county poor asylums on October 31, 1906. Under the law, children between the ages of three and seventeen years may not remain in the county poor asylums longer than sixty days. Of the ninety-two asylums in the State, only twenty-five had inmates under seventeen years of age on the last day of the fiscal year. Seventeen of these were babies with their mothers, and of the remaining twenty-nine, nine were epileptic or feeble-minded, two were sick or crippled, and eighteen were able-bodied and bright. Those who remember that twelve or fifteen years ago there were between two hundred and three hundred children to be found at all times in these institutions will be gratified by this report.

I thank you, and through you the Board, also the other agents associated with me for their faithful services throughout the year.

P. N. HISER,
State Agent.
